- A. Continuous cost
- B. Reviewed frequently
- C. All of the Above
- D. Fixed cost

**Answer: C**

Explanation:
Agile funding is flexible and adapts to the iterative, incremental nature of Agile and DevOps projects.
It can be fixed cost for some work, continuous cost for ongoing value streams, and is reviewed frequently to align with evolving priorities.
All three characteristics are true, so D ("All of the Above") is correct.

**NEW QUESTION # 32**
What is the first step to take when improving DevOps automation?

- A. Replace proprietary software with open source tools
- B. Build a DevOps toolchain
- C. Architect before automating

- D. Implement self-service

**Answer: C**

Explanation:
PeopleCert emphasizes thatarchitecturemust be planned before automating processes. This means mapping the value stream, understanding dependencies, identifying bottlenecks, and defining integration points before selecting or configuring tools.
Automating without a clear architecture can lead to fragmented processes, wasted effort, and technical debt.
Once the architecture is sound, teams can implement automation in a way that supports scalability, maintainability, and interoperability.
A(building the toolchain) is important but comes after architecture.C(switching to open source) is a tooling decision, not the first automation step.D(self-service) is a benefit of automation, not the starting point.
Thus,B-Architect before automating-is the correct first step.
