Salesforce JS-Dev-101 Valid Vce & JS-Dev-101 Test Free

The client only needs 20-30 hours to learn our JS-Dev-101 learning questions and then they can attend the test. Most people may devote their main energy and time to their jobs, learning or other important things and can't spare much time to prepare for the test. But if clients buy our JS-Dev-101 Training Materials they can not only do their jobs or learning well but also pass the test smoothly and easily because they only need to spare little time to learn and prepare for the JS-Dev-101 test.

Salesforce Certified JavaScript Developer - Multiple Choice Sample Questions (Q37-Q42):

NEW QUESTION # 37

A developer at Universal Containers creates a new landing page based on HTML, CSS, and JavaScript.

To ensure that visitors have a good experience, a script named `personalizeWebsiteContent` needs to be executed to do some custom initialization when the webpage is fully loaded with HTML content and all related files.

Which statement should be used to call `personalizeWebsiteContent` based on the above business requirement?

- **A. `window.addEventListener('load', personalizeWebsiteContent);`**

- B. `window.addEventListener('onload', personalizeWebsiteContent);`
- C. `document.addEventListener('DOMContentLoaded', personalizeWebsiteContent);`
- D. `document.addEventListener('onDOMContentLoaded', personalizeWebsiteContent);`

Answer: A

Explanation:

Comprehensive and Detailed Explanation From JavaScript Knowledge:

Two key browser events:

`DOMContentLoaded` (fired on document):

Fired when the HTML document has been completely loaded and parsed, without waiting for stylesheets, images, and subresources to finish loading.

`load` (fired on window):

Fired when the entire page is fully loaded, including all dependent resources such as stylesheets and images.

The requirement states:

"... when the webpage is fully loaded with HTML content and all related files." That matches the semantics of the `load` event on the window object.

So the correct code is:

`window.addEventListener('load', personalizeWebsiteContent);`

Why others are incorrect:

A: `DOMContentLoaded` fires earlier, when HTML is parsed, but before all related files (images, some styles, etc.) are guaranteed to be loaded.

B: `'onDOMContentLoaded'` is not a valid event name; the event is `'DOMContentLoaded'`.

D: When using `addEventListener`, the event type is `'load'`, not `'onload'`. `'onload'` is the name of the handler property (`window.onload = ...`), not the event string.

Relevant concepts: `window.load` event, `DOMContentLoaded`, `addEventListener` syntax, page load lifecycle.

NEW QUESTION # 38

developer has a web server running with Node.js. The command to start the web server is `node server.js`. The web server started having latency issues. Instead of a one second turn around for web requests, the developer now sees a five second turnaround. Which command can the web developer run to see what the module is doing during the latency period?

- A. `DEBUG=true node server.js`
- B. `NODE_DEBUG=http, https node server.js`
- C. `DEBUG=http, https node server.js`
- D. `NODE_DEBUG=true node server.js`

Answer: A

NEW QUESTION # 39

A developer at Universal Containers is creating their new landing page based on HTML, CSS, and JavaScript.

To ensure that visitors have a good experience, a script named `personalizeWebsiteContent` needs to be executed when the webpage is fully loaded (HTML content and all related files), in order to do some custom initializations.

Which implementation should be used to call `personalizeWebsiteContent` based on the business requirement above?

- A. Add a handler to the `personalizeWebsiteContent` script to handle the `load` event
- B. Add a handler to the `personalizeWebsiteContent` script to handle the `DOMContentLoaded` event
- C. Add a listener to the window object to handle the `DOMContentLoaded` event
- D. Add a listener to the window object to handle the `load` event

Answer: D

NEW QUESTION # 40

`myArray` can have one level, two levels, or more levels.

Which statement flattens `myArray` when it can be arbitrarily nested?

- A. `myArray.flat(Infinity);`
- B. `myArray.join(",").split(",");`
- C. `[].concat(...myArray);`
- D. `myArray.reduce ((prev, curr) => prev.concat(curr) []);`

Answer: D

NEW QUESTION # 41

A test searches for:

```
<button class="blue">Checkout</button>
```

But the actual HTML is:

```
<button>Checkout</button>
```

The test fails because it expects a class that no longer exists.

What type of test outcome is this?

- A. False negative
- B. True negative
- C. False positive
- D. True positive

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract JavaScript Knowledge Definitions:

False negative → The test reports a failure even though the feature actually works.

False positive → The test reports success when it should not.

True positive → Correctly identifies something is working.

True negative → Correctly identifies something is not working.

In this scenario:

The checkout button does exist, so the feature works.

The test fails incorrectly, because it is checking for the wrong selector.

That is the definition of a false negative.

JavaScript Knowledge Reference (text-only)

Test outcome classification: false negative = feature works but test fails.

NEW QUESTION # 42

.....

People are very busy nowadays, so they want to make good use of their lunch time for preparing for their JS-Dev-101 exam. As is known to us, if there are many people who are plugged into the internet, it will lead to unstable state of the whole network, and you will not use your study materials in your lunch time. If you choose our JS-Dev-101 exam question as your study tool, you will not meet the problem. Because the app of our JS-Dev-101 Exam Prep supports practice offline in anytime. If you buy our products, you can also continue your study when you are in an offline state. You will not be affected by the unable state of the whole network. You can choose to use our JS-Dev-101 exam prep in anytime and anywhere.
