

CDFOM Prüfungsguide: Certified Data Center Facilities Operations Manager & CDFOM echter Test & CDFOM sicherlich-zu-bestehen

Übrigens, Sie können die vollständige Version der ExamFragen CDFOM Prüfungsfragen aus dem Cloud-Speicher herunterladen:
<https://drive.google.com/open?id=1dZWD1Wqi6wMEjkt59IsqYPvr2wzqrTRU>

Um in einer Branche immer an führender Stelle zu stehen, muss das Unternehmen seine eigene Ressourcen zu vermehren. Wir ExamFragen aktualisieren kontinuierlich die Test-Bank und die Software. Deshalb können wir Ihnen garantieren, dass die EXIN CDFOM Prüfungssoftware, die Sie benutzen, enthält die neuesten und die umfassendsten Prüfungsunterlagen. In Welcher Vorbereitungsphase der EXIN CDFOM Prüfung immer Sie stehen, kann unsere Software Ihr bester Helfer sein, denn die Prüfungsunterlagen der EXIN CDFOM werden von dem erfahrenen und qualifiziertem IT Eliteteam geordnet und analysiert.

EXIN CDFOM Prüfungsplan:

Thema	Einzelheiten
Thema 1	Data Centre Operations: Focuses on daily operational activities and procedures supporting continuous facility functioning.
Thema 2	- Monitoring - Reporting - Control: Addresses performance oversight through monitoring, escalation procedures, reporting, and trend analysis.
Thema 3	Project Management: Covers project execution including management principles, organizational structures, and project phases.
Thema 4	Managing Safety & Statutory Requirements: Focuses on workplace safety compliance, including safety policies, training, Permit to Work systems, PPE, emergency preparedness, and safety audits.
Thema 5	The Data Centre Organization: Addresses organizational structure, roles and responsibilities, shift management, performance management, training, career development, and succession planning.
Thema 6	Service Level Management: Covers creating and managing service agreements, including SLAs with measurable metrics, service reporting, customer satisfaction measurement, and continuous improvement processes.

Thema 7	• Environmental Sustainability: Focuses on minimizing environmental impact through power efficiency, waste management, and renewable energy integration.
Thema 8	• Facilities Management: Covers infrastructure maintenance including maintenance programs, outsourcing, contracts, scheduling, spare parts, and contamination control.

EXIN CDFOM Fragenpool - CDFOM PDF Testsoftware

Damit wir besser auf die derzeitigen Herausforderungen reagieren und Ihnen die Fragenkataloge zur EXIN CDFOM Zertifizierungsprüfung von besserer Qualität bieten können, versuchen wir, unser Bestes zu tun, indem wir die IT-Elite Gruppe von ExamFragen verändern und die Testaufgaben von der EXIN CDFOM Zertifizierungsprüfung rechtzeitig aktualisieren. Unser Ziel liegt darin, dass Sie die EXIN CDFOM Zertifizierungsprüfung in kürzester Zeit leicht bestehen können. Bevor Sie unsere Prüfungsmaterialien kaufen, können Sie ein paar kostenlose Prüfungsfragen und Antworten herunterladen und proben.

EXIN Certified Data Center Facilities Operations Manager CDFOM Prüfungsfragen mit Lösungen (Q43-Q48):

43. Frage

When creating a compliance document register, which categories should at least be included?

- A. Staffing and training
- B. Training and business culture
- **C. Legal and service**
- D. Marketing and budget

Antwort: C

Begründung:

A compliance document register ensures that the organization maintains oversight and traceability of all documents required to meet regulatory, legal, and service-related obligations. The register is essential for audits, governance, risk management, and operational continuity. According to EPI's GRC framework, the minimum categories that must be included are legal and service compliance documents.

Legal documents include regulatory requirements, statutory obligations, contracts, permits, safety regulations, environmental compliance mandates, and jurisdictional requirements. Service documents include SLAs, OLAs, underpinning contracts, service catalogs, and operational procedures required to fulfill service commitments. These categories represent the core compliance landscape affecting the organization's ability to operate legally and deliver services contractually.

Options B, C, and D list other organizational elements that may appear in broader documentation sets but are not fundamental compliance categories. Marketing, budgeting, staffing policies, and business culture documents do not constitute mandatory compliance obligations and are not required for inclusion in a compliance register.

Thus, the correct answer is A - Legal and service.

44. Frage

What is the main reason for (senior) management to be scheduled into the 'on-duty' roster?

- A. It assists management in optimally reviewing monitoring thresholds
- B. It provides management hands-on experience solving incidents.
- **C. It involves management when incidents are escalating**
- D. It provides management better insights with the number of incidents occurring

Antwort: C

Begründung:

Senior management is included in the duty roster to support escalation procedures.

In EPI's operational model:

- * Managers are not part of routine monitoring or incident handling.
- * Their role is to intervene only when an incident escalates beyond operational authority, such as major outages, SLA-impacting events, or high-risk situations.
- * Management provides decision-making, authorization, and resource allocation during escalations.

Why other options are incorrect:

- * A: Managers should not gain "hands-on" experience during incidents.
- * B: Incident reporting already provides insights; no roster needed.
- * D: Monitoring thresholds are reviewed separately, not via duty rosters.

Thus, C is correct.

EPI DCFOM-Aligned Reference Concepts (Paraphrased)

- * Management is involved in the escalation layer, not daily operations.
- * Duty rosters ensure proper escalation handling and governance.

45. Frage

Several data center services in the service catalog charge the customer on the actual usage of those services. What chargeback model is applied?

- A. Service Based Pricing (SBP)
- B. Negotiated Flat Rate (NFR)
- **C. Measured Resource Usage (MRU)**
- D. Tiered Flat Rate (TFR)

Antwort: C

Begründung:

When customers are billed based on the actual consumption of services, this model is known as Measured Resource Usage (MRU).

MRU charges customers according to:

- * Actual power consumption
- * Actual cooling usage
- * Actual rack utilization
- * Actual bandwidth or cross-connect usage
- * Actual resource usage metrics

This model aligns with transparency, fairness, and resource accountability.

Why other options are incorrect:

- * A - SBP: Charges based on predefined service definitions, not usage.
- * B - NFR: A single negotiated flat fee, regardless of usage.
- * C - TFR: Flat fee bands or tiers, independent of precise usage.

Thus, D - MRU is correct.

EPI DCFOM-Aligned Reference Concepts (Paraphrased)

- * MRU charges customers based on actual measured resource consumption.
- * Common in modern colocations to align costs with usage.

46. Frage

Customers complain about support response times being too slow. After a check with the vendor about the agreed SLAs, it is concluded that no violation occurred.

What is the likely cause of the customers complaining?

- A. There is not enough operations staff to respond to customer complaints
- **B. The Underpinning Contract with the vendor is not aligned with the customer Service Level Agreement**
- C. Service Level Agreement reporting is unclear
- D. Customers involved receive standard support only and should upgrade to a premium support level

Antwort: B

Begründung:

This scenario reflects a classic misalignment between the Service Level Agreement (SLA) that the data center guarantees to customers and the Underpinning Contract (UC) or vendor contract that supports those services.

EPI's Service Level Management model stresses that all contractual layers must be fully aligned: SLAs (customer-facing), OLAs (internal agreements), and UCs (vendor contracts). If the vendor meets its contractual requirements but customers still experience

slow response times, it means the vendor contract is not strict enough to support the SLA commitments.

For example, the SLA may require a 15-minute response time, but the vendor contract may only require a 2-hour response. In such cases, the data center cannot meet customer expectations, even when all parties technically meet their agreements. This mismatch is common in outsourced environments when capability assessment and contract alignment are overlooked.

Option A describes insufficient staffing, which would directly affect operations but is not indicated in the scenario. Option C assumes customers chose the wrong support tier, which is not stated. Option D deals with reporting clarity, not response speed.

Thus, misaligned UCs are the most likely root cause.

47. Frage

What is the formula to calculate the PUE of a Data Center?

- A. $PUE = VA * PF$
- B. $PUE = \text{Total facility power} / \text{Total IT equipment power}$
- C. $PUE = \text{Total generator capacity} / \text{total battery capacity}$
- D. $PUE = \text{UPS input power} / \text{UPS output power}$

Antwort: B

Begründung:

Power Usage Effectiveness (PUE) is the most widely recognized efficiency metric in the data center industry and is strongly emphasized within EPT's environmental sustainability and energy management teachings. PUE is designed to show how efficiently a data center uses energy, focusing specifically on how much of the total facility energy actually reaches the IT equipment. The correct formula is:

$PUE = \text{Total Facility Power} \div \text{Total IT Equipment Power}$

"Total Facility Power" includes all supporting infrastructure: cooling systems, UPS losses, power distribution losses, lighting, security, fire systems, and all auxiliary loads required to operate the data center. "Total IT Equipment Power" refers only to the active IT load such as servers, storage, and network devices.

A PUE value close to 1.0 indicates optimum energy efficiency, meaning nearly all facility energy is being consumed directly by IT operations. Higher PUE values indicate less efficient facilities where substantial energy is being consumed by overhead systems. This metric is essential for sustainability strategies, capacity planning, and continuous improvement. It allows benchmarking across facilities and helps operators set improvement targets by analyzing where energy losses occur. Because of its simplicity and clarity, PUE remains an industry-standard metric recognized globally.

48. Frage

.....

Es gibt eine Menge von Websites, die EXIN CDFOM Zertifizierungsprüfung und andere Schulungsunterlagen bieten. Aber ExamFragen ist die einzige Website, die Ihnen qualitativ hochwertige Schulungsunterlagen zur EXIN CDFOM Zertifizierungsprüfung bietet. Unter der Anleitung und Hilfe von ExamFragen können Sie die EXIN CDFOM Prüfung beim ersten Versuch bestehen. Die Fragenpool von ExamFragen werden von den lebendigen IT-Experten nach ihrem umfangreichen Wissen und Erfahrungen bearbeitet. Sie werden Sie sicher im IT-Bereich sehr fördern.
