Sharing-and-Visibility-Architect real questions files are professional and high passing rate so that users can pass the exam at the first attempt. High quality and pass rate make us famous and growing faster and faster. Many candidates compliment that Sharing-and-Visibility-Architect Study Guide materials are best assistant and useful for qualification exams, they have no need to purchase other training courses or books to study, and only by practicing our Sharing-and-Visibility-Architect Salesforce Architect exam braindumps several times before exam, they can pass exam in short time easily.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q18-Q23):

NEW QUESTION # 18

Universal Containers regularly uploads large amounts of parent and child records into Salesforce to maintain integrations with other systems that update their date in scheduled batches or continuously in real time. Which two situations may pose a risk of producing locking errors? Choose 2 answers.

- A. Updates to child records that have the same parent records are being processed simultaneously in separate transactions.
- B. Updates to parent and child records are being processed in the same batch.
- C. Updates to parent and child records are being processed synchronously in the same threads.
- D. Updates to parent records and their child records being processed simultaneously in separate threads.

Answer: A,D

Explanation:

Explanation

Updates to child records that have the same parent records being processed simultaneously in separate transactions and updates to parent records and their child records being processed simultaneously in separate threads may pose a risk of producing locking errors. These situations may cause concurrency issues and result in record locking exceptions. Updates to parent and child records being processed in the same batch or synchronously in the same thread are less likely to cause locking errors as they are processed sequentially.

NEW QUESTION # 19

Universal Containers has selected a small and diverse group of users to review inactive accounts. Given the Private sharing model, a public group was created and made available to this group of users. A sharing rule was created to make inactive accounts visible to the public group. However, some of these users are reporting they do not see any of the accounts that were shared with the public group.

What is the underlying issue for these users?

- A. The accounts are owned by users higher in the Role Hierarchy.
- B. The page layout assigned to these users is different than the Account owner.
- C. The users are in profiles that have no access to the Account object.

Answer: C

Explanation:

In Salesforce, users must have object-level access (Read permission) to see records shared through sharing rules or any other mechanism. If some users in the public group lack the Read permission for the Account object, they will not be able to see the accounts, even though they are part of the public group with a sharing rule granting access.

* Option A (Correct): Lack of object-level permissions for the Account object explains why some users cannot view the shared accounts.

* Option B: Page layouts only affect how records are displayed, not record visibility.

* Option C: Role Hierarchy does not impact this issue, as it is related to public group sharing.

:

Object Permissions Overview

NEW QUESTION # 20

Bob uploads a PDF to his Files Home private library.

Who can view this file?

- A. Bob and users above Bob in the role hierarchy
- B. Bob and users with Modify All Data permission
- C. Bob and users with View All Data permission
- **D. Only Bob**

Answer: D

NEW QUESTION # 21

Sales manager at universal containers (UC) have requested viewing customer invoices in Salesforce. Invoice data is mastered in the ERP system. The architect at UC decided to surface the customer invoices in salesforce using external objects and did the following:

-Configured an external object called Invoice.

-Created a lookup relationship between account and the invoice.

How can the architect grant the sales managers access to the customer invoices data?

- A. By creating sharing rules to share the invoices records with users in sales managers roles.
- B. By creating manual sharing to share invoices with relevant sales managers.
- C. By creating a sharing set to share invoices with users in sales manager role.
- **D. By creating controlling the invoices object permission on the sales manager's profile.**

Answer: D

Explanation:

Explanation

Controlling the invoices object permission on the sales manager's profile is how the architect can grant the sales managers access to the customer invoices data. Object permissions determine whether a user can create, read, edit, or delete any record of that object. Since invoice data is surfaced in Salesforce using external objects, sales managers need to have at least read permission on the invoice object to view the customer invoices data. Option A is incorrect, since sharing rules are not available for external objects. Option B is incorrect, since manual sharing is not available for external objects. Option D is incorrect, since sharing sets are not available for external objects.

NEW QUESTION # 22

The Corporate Identity and Access Team needs to audit User setup in the Salesforce ..

What two permissions should be granted to this team so they can perform their audit?

Choose 2 answers

- **A. View Setup and Configuration**
- **B. View All Users**
- C. View permission on the User object
- D. View All Data

Answer: A,B

Explanation:

Explanation

To audit user setup in Salesforce, the team needs to have both View Setup and Configuration and View All Users permissions. View Setup and Configuration allows them to access the setup menu and see the user profiles, roles, and permission sets. View All Users allows them to see all the user records and their details, such as login history and assigned licenses

NEW QUESTION # 23

.....
