NEW QUESTION # 144

What mechanism is essential for securing data during transit in asset interchange?

- A. Data in transit encryption

NEW QUESTION # 145

What is a benefit of utilizing the IBM Data Virtualization service?

- A. Access to many different data sources can be governed centrally.
- B. Data can be copied to the platform quickly and easily.
- C. Discover and classify sensitive information.
- D. Workloads can bypass data source security for faster execution.

Answer: A

Explanation:

IBM Data Virtualization allows users to query and combine data from multiple disparate sources without physically moving it. One of its key benefits is that it enables central governance of access and policies across these data sources. Rather than duplicating data, the service provides virtualized views while maintaining source security and compliance. It does not bypass security (B), nor is its main goal to copy data (A). Discovering and classifying sensitive information (C) is primarily the function of IBM Knowledge Catalog.

NEW QUESTION # 146

Are there any special considerations for the client to migrate existing server jobs to DataStage in Cloud Pak for Data?

- A. Server jobs migrate directly to parallel jobs that always require modification.
- B. Server jobs migrate with no changes.
- C. Server jobs are automatically migrated to Watson Pipeline flows.
- D. Server jobs can be converted to parallel jobs prior to migration using MettleCI.

Answer: D

Explanation:

Legacy DataStage server jobs are not automatically compatible with DataStage on Cloud Pak for Data, which uses a parallel engine architecture. MettleCI is the recommended tool to convert server jobs into parallel jobs before migration. This conversion allows reusability and ensures the migrated jobs can run efficiently in the CP4D environment. Direct migration without modification (option D) is not possible, and they do not migrate to Watson Pipelines (option A).
