Users do not need to spend too much time on D-ISM-FN-01 questions torrent, only need to use their time pieces for efficient learning, the cost is about 20 to 30 hours, users can easily master the test key and difficulties of questions and answers of D-ISM-FN-01 prep guide, and in such a short time acquisition of accurate examination skills, better answer out of step, so as to realize high pass the qualification test, has obtained the corresponding qualification certificate. Differ as a result the D-ISM-FN-01 Questions torrent geared to the needs of the user level, cultural level is uneven, have a plenty of college students in school, have a plenty of work for workers, and even some low education level of people laid off.

EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q54-Q59):

NEW QUESTION # 54
Question:
What is the most common technique used by malware protection software to detect malware?

- A. Signature-based detection
- B. Behavioral analysis
- C. Heuristic analysis
- D. Reputation-based analysis

Answer: A

Explanation:
Signature-based detectionis the most common method of malware detection. It works by comparing files and data to a database of known malware signatures:
Fast and efficient for known threats.
Updated regularly by security vendors.
* Reputation-based:Looks at the trustworthiness of files/domains.
* Behavioral:Monitors actions and identifies suspicious patterns.
* Heuristic:Detects new malware based on file behaviors and patterns, useful for unknown threats.

NEW QUESTION # 55
Question:
A company is concerned about the risk of data loss due to accidental deletion and hardware failures. What is theprimaryreason for implementing a data backup solution?

- A. To maintain business continuity
- B. To improve application performance
- C. To reduce storage costs
- D. To reduce the usage of archive storage

Answer: A

Explanation:
The primary purpose of a data backup solution is tomaintain business continuityby ensuring data can be restored in case of accidental deletion, hardware failure, or data corruption.
* Not to reduce storage costs:Archiving and tiering handle that.
* Not to improve application performance:Backup processes typically don't enhance live performance.
* Not to reduce archive usage:Backup and archive have different use cases.

NEW QUESTION # 56
Question:
What are the two benefits of using sub-LUN tiering?

- A. Simplified storage management
- B. Reduced need for storage tiering policies
- C. Reduced need for storage capacity
- D. Cost optimization
- E. Granular control over data placement

Answer: D,E

Explanation:
Sub-LUN tiering allows for the movement of data at a more granular level within a Logical Unit Number (LUN), enabling:
* Granular control over data placement:Specific data blocks can be moved to appropriate storage tiers based on access patterns.
* Cost optimization:Frequently accessed data resides on high-performance (and more expensive) storage, while less accessed data is moved to cost-effective storage, optimizing overall storage costs.
Other options:
* Reduced need for storage capacity:Not directly impacted by sub-LUN tiering.
* Reduced need for storage tiering policies:Policies are still required to manage data movement.
* Simplified storage management:While sub-LUN tiering adds efficiency, it may introduce complexity in management.

NEW QUESTION # 57
Question:

A company needs to ensure high availability for its applications and minimize downtime in case of a disk failure. The current storage configuration is a RAID 0 array with SSDs. Which RAID level is most cost effective and would provide the necessary data protection without significant performance degradation?

- A. Implement a RAID 1 array with SSDs for disk mirroring
- B. Maintain the existing RAID 0 configuration with SSDs
- C. Upgrade to a RAID 6 array with SSDs for dual parity protection
- D. Migrate to a RAID 5 array with SSDs for parity-based protection

Answer: D

NEW QUESTION # 58
Question:
What method does FCIP use to transport Fibre Channel SAN data?

- A. FCIP separates LAN and FC SAN data and tunnels FC SAN data over IP networks.
- B. FCIP encapsulates and tunnels FC SAN data over Ethernet networks.
- C. FCIP encapsulates and tunnels FC SAN data over IP networks.
- D. FCIP splits LAN and FC SAN data and tunnels FC SAN data over Ethernet networks.

Answer: C

Explanation:
FCIP (Fibre Channel over IP) is a protocol used to connect Fibre Channel SANs across geographically dispersed locations over IP networks. It does this by encapsulating Fibre Channel frames into IP packets (Layer 3). This allows FC SAN traffic to be transmitted across IP-based WANs.
* Ethernet networks (Layer 2) are not involved in the FCIP encapsulation process directly because FCIP uses IP packets.
* Splitting LAN/SAN data is not the method used; FCIP encapsulates all FC frames.
* Separating LAN and SAN data also does not describe the tunneling function.
