Huawei HCIP-Datacom-Campus Network Planning and Deployment V1.5 認定 H12-841_V1.5 試験問題 (Q235-Q240):

質問 # 235

In Huawei's wide area network solution, for "real-time data acquisition across geographical regions (such as industrial sensor data)," which of the following technologies can "ensure low latency and reliability of data transmission and avoid data loss"?

- A. Directly transmit sensor data without any safeguards.
- B. Using the TCP protocol for transmission, relying on retransmission to ensure reliability (high latency).
- C. Real-time Transport Protocol (RTP) based on UDP + FEC packet loss recovery
- D. Reduce the sensor data sampling frequency to decrease the amount of data.

正解: C

質問 # 236

In the WAN BGP protocol, if "route reflectors are configured between IBGP neighbors, and the reflectors reflect client routes to non-client neighbors", which of the following problems will be caused?

- A. May create IBGP routing loops (if non-client neighbors are not configured with loop prevention mechanisms).
- B. Non-client neighbors cannot receive reflected routes (the route reflector does not reflect client routes to non-clients).
- C. IBGP neighbor relationships are automatically disconnected.
- D. The reflector automatically stops the route reflection function.

正解: A

質問 # 237

In an MPLS VPN network, which of the following operations can "ensure that the PE device correctly associates with the corresponding VPN instance after receiving a VPNv4 route"?

- A. No configuration is required; the PE device automatically associates with the VPN instance.
- B. Configure a VPN instance on the P device to pass routing association information.
- C. Configure routing policies on the PE device to import VPNv4 routes to the corresponding VPN instance.
- D. Configure the BGP protocol on the CE device and specify the VPN instance.

正解: C

質問 # 238

In a wide area network (WAN) BGP protocol deployment, if it is necessary to "set the Local Preference property of EBGP neighbor routes to a higher value so that they are selected first", which of the following strategies should be configured?

- A. Enable BGP route aggregation, merge routes, and then modify their properties.
- B. Apply route-policy to the BGP neighbor inbound direction and set Local Preference.
- C. Apply a prefix-list to filter routes in the outbound direction of BGP neighbors.
- D. Configure BGP neighbor MD5 authentication

正解: B

質問 # 239

In an MPLS VPN network, which of the following descriptions best describes the function of a "VPN label (inner label)"?

- A. Used to identify the priority of data packets and ensure QoS (Quality of Service)
- B. Used by PE devices to identify the VPN instance to which data packets belong, thus achieving route isolation.
- C. Used for backbone network forwarding between P devices, identifying the forwarding path.
- D. Used by CE devices to differentiate between different VPN services and determine forwarding paths.

正解: B

質問 # 240
