It helps you get practical experience with the final Sharing-and-Visibility-Architect Exam. By practicing under real Salesforce Certified Sharing and Visibility Architect (Sharing-and-Visibility-Architect) exam situations again and again, you develop confidence and skills to attempt the Sharing-and-Visibility-Architect exam within its allocated time.

## Salesforce Certified Sharing and Visibility Architect Sample Questions (Q42-Q47):

### NEW QUESTION # 42

Universal Containers has selected a small and diverse group of users to review inactive accounts. Given the Private sharing model, a public group was created and made available to this group of users. A sharing rule was created to make inactive accounts visible to the public group. However, some of these users are reporting they do not see any of the accounts that were shared with the public group.

What is the underlying issue for these users?

- A. The page layout assigned to these users is different than the Account owner.
- B. The users are in profiles that have no access to the Account object.

- C. The accounts are owned by users higher in the Role Hierarchy.

**Answer: B**

Explanation:

In Salesforce, users must have object-level access (Read permission) to see records shared through sharing rules or any other mechanism. If some users in the public group lack the Read permission for the Account object, they will not be able to see the accounts, even though they are part of the public group with a sharing rule granting access.

\* Option A (Correct): Lack of object-level permissions for the Account object explains why some users cannot view the shared accounts.

\* Option B: Page layouts only affect how records are displayed, not record visibility.

\* Option C: Role Hierarchy does not impact this issue, as it is related to public group sharing.

:

Object Permissions Overview

#### NEW QUESTION # 43

Universal Containers (UC) has 200 distributors that use Partner Community licenses. Partners cannot see each other's data, but UC is also trying to give more visibility to data for certain individuals at a distributor.

Which scalable option give users in the partner manager role access to all case and container records for partner users at the same distributor?

- A. Create an ownership based sharing rule.
- B. Give Super User permission to the individual partner manager users.
- C. Create sharing sets.

**Answer: A**

#### NEW QUESTION # 44

Universal Containers (UC) implemented Sales Cloud and requested that only certain branch staff trained to sell high risk products can create opportunities for high risk products.

In which two ways can an Architect allow only specific branch staff to sell high risk products?

Choose 2 answers

- A. Share (High Risk) price book with the trained staff via manual sharing.
- B. Set Price Book Organization Wide Default to View Only and share the price book (High Risk) with the trained staff.
- C. Share (High Risk) price book with the trained staff via sharing rule.
- D. Configure Price Book Organization wide default to No Access.

**Answer: A,B**

Explanation:

Explanation

Price books are a way to store different prices for products that can be added to opportunities. Price books can have different organization-wide defaults (OWD) settings that control the baseline level of access for users. To allow only specific branch staff to sell high risk products, the architect can recommend setting the price book OWD to View Only and sharing the high risk price book with the trained staff via manual sharing or sharing rules. Manual sharing allows the owner or anyone with Full Access to a record to share it with another user or group of users. Sharing rules allow the admin to automatically grant access to records based on certain criteria.

Therefore, the answer A and C are correct and the other options are incorrect.

#### NEW QUESTION # 45

In order to allow community users to collaborate on Opportunities, which license type must the users be given?

- A. Customer Community Plus
- B. Customer Community
- C. Partner Community

**Answer: C**

Explanation:

To enable community users to collaborate on Opportunities, they must have access to the Opportunity object, which is included in the Partner Community license. This license type is specifically designed for partners and provides access to features like Opportunities, Campaigns, Leads, and other standard objects required for collaborative sales processes.

\* Option A: Customer Community Plus licenses do not grant access to Opportunities, as they are primarily focused on external customer engagement without sales collaboration.

\* Option B: Customer Community licenses are limited to basic interactions like viewing and updating cases or accessing content, and they exclude access to Opportunities.

\* Option C (Correct): Partner Community licenses include access to Opportunities, making them the appropriate choice for this use case.

**NEW QUESTION # 46**

The sales manager in Japan have asked the sales manager in Australia to assist them with closing their deals. How are these requirements achieved?

- A. Assign the sales manager View All on the opportunity object.
- **B. Create ownership-based sharing rule.**
- C. Use sharing set to give the sales manager access to the deals.
- D. Use opportunity teams to automatically add the sales manager as a team member.

**Answer: B**

**NEW QUESTION # 47**

.....
