Exam Sample ACA-100 Online - ACA-100 Valid Test Guide

With ACA-100 study materials, you will have more flexible learning time. With ACA-100 study materials, you can flexibly arrange your study time according to your own life. You don't need to be in a hurry to go to classes after work as the students who take part in a face-to-face class, and you also never have to disrupt your schedule for learning. ACA-100 Study Materials help you not only to avoid all the troubles of learning but also to provide you with higher learning quality than other students'.

Appian Certified Analyst Sample Questions (Q50-Q55):

NEW QUESTION # 50

You are part of an Agile team, and your responsibilities and attributes include:

A keen understanding of the business, the customer, and the market

The ability to clearly express product backlog items

The ability to prioritize the backlog to optimize the value of what the team will deliver The ability to order the items in the product backlog to best achieve goals and missions.

What is your role name?

- A. Product Owner
- B. Scrum Master
- C. Appian Analyst
- D. Sponsor

Answer: A

Explanation:

The responsibilities and attributes described are aligned with the role of a Product Owner in an Agile team. The Product Owner is responsible for maximizing the value of the product resulting from the work of the development team. They have a deep understanding of the business, customer needs, and market trends, and they use this knowledge to manage and prioritize the product backlog.

Role of Product Owner:

Understanding the Business: The Product Owner must understand the business context to prioritize work that delivers the most value.

Expressing Product Backlog Items: The Product Owner is responsible for defining and clearly expressing the items in the product backlog.

Prioritizing and Ordering the Backlog: The Product Owner prioritizes and orders the backlog items to optimize the team's output and ensure alignment with business goals.

Why Not Other Options?:

A . Appian Analyst: While an Appian Analyst may have some similar responsibilities, the specific role of managing the product backlog and optimizing the value delivered by the team is the core responsibility of the Product Owner.

B . Scrum Master: The Scrum Master facilitates the Scrum process but does not manage the product backlog.

D . Sponsor: The Sponsor typically provides financial support and strategic direction but does not manage day-to-day product backlog activities.

References:

Appian Community Success Guide: Roles in Agile Teams

The Product Owner role is crucial in ensuring that the development team is working on the most valuable features and that the product aligns with business and market needs.

NEW QUESTION # 51

Review this image:

AND, OR, XOR

What is this group of BPMN symbols called?

- A. Flows
- B. Gateways
- C. Activities
- D. Events

Answer: B

Explanation:

In BPMN (Business Process Model and Notation), the symbols AND, OR, XOR are categorized as Gateways. Gateways control the flow of processes by determining which path to follow based on certain conditions. They are essential in managing the decision points within a process, directing the flow based on the logic defined in the process model. Appian Documentation - BPMN Gateways

NEW QUESTION # 52

You are translating a user requirement into a user story and need to ensure that the desired functionality will be delivered as expected.

What needs to be written into the user story to ensure it will meet the requirement?

- A. Business value
- B. Estimation of effort to develop
- C. Test Script
- **D. Acceptance criteria**

Answer: D

Explanation:

When translating a user requirement into a user story, it is essential to include acceptance criteria to ensure that the desired functionality will be delivered as expected. Acceptance criteria provide clear, testable conditions that define when a user story is complete and meets the requirement. This ensures that the development team has a clear understanding of what needs to be built and how it will be validated, reducing the risk of miscommunication and ensuring the final product aligns with the user's needs. Appian Documentation - Writing Effective User Stories Note: While business value (B) and estimation of effort (A) are important elements of a user story, they do not directly ensure that the functionality will meet the requirement. The test script (C) is typically created after the user story is developed.

NEW QUESTION # 53

When writing a user story, which statement best represents the standard format?

- A. "As a marketing manager, I want reports on my client base so that I can access them via a dashboard."
- **B. "As an Investor, I want to see a summary of my investment accounts so that I can decide where to focus my attention."**
- C. "As a user, I want to delete a photo and upload a new one."
- D. "As a user, I want the application to integrate with 3rd party systems."

Answer: B

Explanation:

The standard format for writing user stories follows a specific structure: "As a [role], I want [goal] so that [benefit]." This format ensures that the user story captures who the user is, what they want to achieve, and why it is important.

User Story Format:

Role: The user role that is relevant to the story.

Goal: The specific action or feature the user desires.

Benefit: The reason why this feature or action is valuable to the user.

Example Explanation:

The correct example, "As an Investor, I want to see a summary of my investment accounts so that I can decide where to focus my attention," perfectly fits the standard format. It specifies the user role (Investor), the goal (seeing a summary of accounts), and the benefit (deciding where to focus attention).

Why Not Other Options?:

A and D lack clarity on the benefit or the user's role, making them less effective as user stories.

B is close but is more detailed than the standard format, making it less concise.

References:

Appian Agile Practices Guide: Writing Effective User Stories

Using the standard format for user stories helps ensure that the development team clearly understands the user's needs and the value of the feature being requested.

NEW QUESTION # 54

Which one of the following Appian object combinations allows you to directly access and use data from the Appian database?

- A. An expression rule with an integration call
- B. A process model that uses an Export to Excel smart service
- **C. An expression rule with a query**
- D. An interface object with an integration call

Answer: C

Explanation:

In Appian, the combination of an expression rule with a query allows you to directly access and use data from the Appian database. Expression rules are used to define business logic, while queries are used to retrieve data from the database.

Expression Rule with a Query:

An expression rule can be used to execute a query against the Appian database to retrieve data.

This combination allows you to filter, sort, and manipulate the data retrieved directly from the database within your application logic. The `!queryEntity()` function is commonly used within an expression rule to fetch data from a specific entity in the database.

Why Not Other Options?:

A . An expression rule with an integration call: This option is used for retrieving data from external systems, not directly from the Appian database.

C . A process model that uses an Export to Excel smart service: This is used for exporting data to Excel but does not directly access the database for querying purposes.

D . An interface object with an integration call: This combination is also used for interfacing with external systems rather than directly accessing the Appian database.

Implementation in Appian:

Define an expression rule that uses `!queryEntity()` to fetch data from a specific table or view in the Appian database.

The query can be customized with filters, sorting, and paging to retrieve the exact data needed for the application.
