If you are going to purchasing the NGFW-Engineer exam bootcamp online, you may pay more attention to the pass rate. With the pass rate more than 98%, our NGFW-Engineer exam materials have gained popularity in the international market. And we have received many good feedbacks from our customers. In addition, we offer you free demo to have a try before buying NGFW-Engineer Exam Braindumps, so that you can have a deeper understanding of what you are going to buy. You can also enjoy free update for one year, and the update version for NGFW-Engineer will be sent to your email automatically.

If you are interested in Soft test engine of NGFW-Engineer practice questions, you should know below information better. Soft test engine should be downloaded in personal computer first time online, and then install. After installment you can use NGFW-Engineer practice questions offline. You can also copy to other electronic products such as Phone, Ipad. On the hand, our exam questions can be used on more than 200 personal computers. If you purchase Soft test engine of NGFW-Engineer Practice Questions for your companies, it will be very useful.

New Palo Alto Networks NGFW-Engineer Test Discount, NGFW-Engineer Top Questions

As a responsible company, we don't ignore customers after the deal, but will keep an eye on your exam situation. Although we can assure you the passing rate of our NGFW-Engineer training guide nearly 100 %, we can also offer you a full refund if you still have concerns. So you have nothing to worry about, only to study with our NGFW-Engineer Exam Questions with full attention. And as we have been in this career for over ten years, our NGFW-Engineer learning materials have become famous as a pass guarantee.

Palo Alto Networks NGFW-Engineer Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Integration and Automation: This section measures the skills of Automation Engineers in deploying and managing Palo Alto Networks NGFWs across various environments. It includes the installation of PA-Series, VM-Series, CN-Series, and Cloud NGFWs. The use of APIs for automation, integration with third-party services like Kubernetes and Terraform, centralized management with Panorama templates and device groups, as well as building custom dashboards and reports in Application Command Center (ACC) are key topics.
Topic 2	<ul style="list-style-type: none"> • PAN-OS Networking Configuration: This section of the exam measures the skills of Network Engineers in configuring networking components within PAN-OS. It covers interface setup across Layer 2, Layer 3, virtual wire, tunnel interfaces, and aggregate Ethernet configurations. Additionally, it includes zone creation, high availability configurations (active • active and active • passive), routing protocols, and GlobalProtect setup for portals, gateways, authentication, and tunneling. The section also addresses IPSec, quantum-resistant cryptography, and GRE tunnels.
Topic 3	<ul style="list-style-type: none"> • PAN-OS Device Setting Configuration: This section evaluates the expertise of System Administrators in configuring device settings on PAN-OS. It includes implementing authentication roles and profiles, and configuring virtual systems with interfaces, zones, routers, and inter-VSYS security. Logging mechanisms such as Strata Logging Service and log forwarding are covered alongside software updates and certificate management for PKI integration and decryption. The section also focuses on configuring Cloud Identity Engine User-ID features and web proxy settings.

Palo Alto Networks Next-Generation Firewall Engineer Sample Questions (Q118-Q123):

NEW QUESTION # 118

A cloud security team wants to extend its existing Palo Alto Networks Security policies into the organization's Kubernetes environments. The team requires an NGFW solution that can be deployed natively as a container and managed by Panorama. Which firewall form factor meets these requirements?

- A. VM-Series
- B. PA-5400 Series
- C. Cloud NGFW
- **D. CN-Series**

Answer: D

Explanation:

The CN-Series firewall is a container-native NGFW designed specifically for Kubernetes environments, deployable as containers and fully manageable by Panorama, enabling consistent policy enforcement across cloud-native and traditional network environments.

NEW QUESTION # 119

What is a result of enabling split tunneling in the GlobalProtect portal configuration with the "Both Network Traffic and DNS" option?

- A. It specifies when the secondary DNS server is used for resolution to allow access to specific domains that are not managed by the VPN.
- **B. It specifies which domains are resolved by the VPN-assigned DNS servers and which domains are resolved by the local DNS servers.**
- C. It allows devices on a local network to access blocked websites by changing which DNS server resolves certain domain names.
- D. It allows users to access internal resources when connected locally and external resources when connected remotely using the same FQDN.

Answer: B

Explanation:

When split tunneling is enabled with the "Both Network Traffic and DNS" option in the GlobalProtect portal configuration, it allows the firewall to control which traffic is sent over the VPN tunnel and which is not.

Specifically, it determines which domains are resolved by the VPN-assigned DNS servers (for domains requiring VPN access) and which are resolved by local DNS servers (for domains that can be accessed without the VPN tunnel).

NEW QUESTION # 120

Which zone type allows traffic between zones in different virtual systems (VSYS), without the traffic leaving the firewall?

- A. Internal
- B. Transient
- C. Isolated
- D. External

Answer: D

Explanation:

External zones enable inter-VSYS communication internally on the firewall by associating with a specific VSYS and allowing traffic to traverse to visible external zones of other VSYS, requiring VSYS visibility configuration and security policies from internal zones to/from the external zone.

NEW QUESTION # 121

An enterprise uses GlobalProtect with both user- and machine-based certificate authentication and requires pre-logon, OCSP checks, and minimal user disruption. They manage multiple firewalls via Panorama and deploy domain-issued machine certificates via Group Policy.

Which approach ensures continuous, secure connectivity and consistent policy enforcement?

- A. Use a wildcard certificate from a public CA, disable all revocation checks to reduce latency, and manage certificate renewals manually on each firewall.
- B. Configure a single certificate profile for both user and machine certificates. Rely solely on CRLs for revocation to minimize complexity.
- C. Deploy self-signed certificates on each firewall, allow IP-based authentication to override certificate checks, and use default GlobalProtect settings for user / machine identification.
- D. Distribute root and intermediate CAs via Panorama template, use distinct certificate profiles for user versus machine certs, reference an internal OCSP responder, and automate certificate deployment with Group Policy.

Answer: D

Explanation:

To ensure continuous, secure connectivity and consistent policy enforcement with GlobalProtect in an enterprise environment that uses user- and machine-based certificate authentication, the approach should:

Distribute root and intermediate CAs via Panorama templates: This ensures that all firewalls managed by Panorama share the same trusted certificate authorities for consistency and security.

Use distinct certificate profiles for user vs. machine certificates: This enables separate handling of user and machine authentication, ensuring that both types of certificates are managed and validated appropriately.

Reference an internal OCSP responder: By integrating OCSP checks, the firewall can validate certificate revocation in real-time, meeting the security requirement while minimizing the overhead and latency associated with traditional CRLs (Certificate Revocation Lists).

Automate certificate deployment with Group Policy: This ensures that machine certificates are deployed in a consistent and scalable manner across the enterprise, reducing manual intervention and minimizing user disruption.

This approach supports the requirements for pre-logon, OCSP checks, and minimal user disruption, while maintaining a secure, automated, and consistent authentication process across all firewalls managed via Panorama.

NEW QUESTION # 122

An engineer is creating an automation workflow. The first step is to deploy a new VM-Series firewall into a VMware vSphere environment, including its virtual machine (VM) configuration and network interfaces. The second step is to connect to the firewall and configure a complex set of Security policies and objects. The team uses both Terraform and Ansible.

For which part of this workflow would Terraform typically be used?

- A. Deploying the VM and associated network interfaces
- B. Applying the detailed Security policies and objects
- C. Storing the credentials needed to access the vSphere environment
- D. Pushing threat intelligence updates to the new firewall

Answer: A

Explanation:

Terraform is designed for declarative provisioning of infrastructure resources, including virtual machines, virtual networks, and interfaces in environments like VMware vSphere, making it the appropriate tool for deploying the VM-Series firewall and its underlying infrastructure components.

NEW QUESTION # 123

.....

With severe competition going up these years, more and more people stay clear that getting a higher degree or holding some professional NGFW-Engineer certificates is of great importance. So instead of spending every waking hour wholly on leisure and entertaining stuff, try to get a NGFW-Engineer certificate is meaningful. This NGFW-Engineer exam guide is your chance to shine, and our NGFW-Engineer practice materials will help you succeed easily and smoothly. With numerous advantages in it, you will not regret.
