For candidates who preparing for the exam, knowing the latest information for the exam is quite necessary. Managing-Cloud-Security exam cram of us can offer free update for 365 days for you, and we have skilled professionals examine the update every day, once we have the update version, we will send you the first time. Managing-Cloud-Security training materials is not only high-quality, but also contain certain quantity, therefore they will be enough for you to pass the exam. We have a professional service team, and the service staffs have professional knowledge for Managing-Cloud-Security Exam Materials, if you have any questions, you can consult us.

our Managing-Cloud-Security exam prep is renowned for free renewal in the whole year. As you have experienced various kinds of exams, you must have realized that renewal is invaluable to study materials, especially to such important Managing-Cloud-Security exams. And there is no doubt that being acquainted with the latest trend of exams will, to a considerable extent, act as a driving force for you to pass the Managing-Cloud-Security Exams and realize your dream of living a totally different life.

Trustworthy Managing-Cloud-Security Exam Torrent | High Pass-Rate Managing-Cloud-Security: WGU Managing Cloud Security (JY02)

Take advantage of the Real4test's WGU training materials to prepare for the exam, let me feel that the exam have never so easy to pass. This is someone who passed the examination said to us. With Real4test WGU Managing-Cloud-Security Exam Certification training, you can sort out your messy thoughts, and no longer twitchy for the exam. Real4test have some questions and answers provided free of charge as a trial. If I just said, you may be not believe that. But as long as you use the trial version, you will believe what I say. You will know the effect of this exam materials.

WGU Managing Cloud Security (JY02) Sample Questions (Q153-Q158):

NEW QUESTION # 153

What is an appropriate countermeasure given the threat of a power outage of a cloud service provider?

- A. Web application firewalls
- B. Storage array replication
- C. Backup generators
- D. Database replication

Answer: C

Explanation:

Backup generators are an appropriate countermeasure for mitigating the risk of a power outage at a cloud service provider. Managing Cloud principles explain that ensuring continuous power supply is a core responsibility of the provider's physical infrastructure management.

Backup generators, along with redundant power feeds and uninterruptible power supplies, allow data centers to continue operating during power failures. This ensures availability, resilience, and continuity of cloud services.

Database replication and storage replication address data availability, while web application firewalls protect against application-layer attacks. They do not mitigate power loss. Therefore, backup generators are the correct countermeasure.

NEW QUESTION # 154

Which group should be notified for approval when a planned modification to an environment is scheduled?

- A. Executive management board
- **B. Change management board**
- C. Event management team
- D. Problem management team

Answer: B

Explanation:

The Change Management Board (CMB), also called the Change Advisory Board (CAB), is the formal authority responsible for reviewing, assessing, and approving planned modifications to IT environments. This group ensures that proposed changes align with business objectives, do not introduce unnecessary risks, and comply with security and regulatory requirements.

Event management teams focus on monitoring events, problem management teams handle root-cause analysis, and executive boards provide strategic direction but are not operational approval authorities. Only the CMB has the explicit role of validating technical and security implications before implementation.

By involving the CMB, organizations enforce structured governance, minimize disruptions, and establish accountability. This practice is central in ITIL and ISO/IEC 20000 standards, ensuring that operational integrity and security are preserved during change cycles.

NEW QUESTION # 155

An organization designing a data center wants the ability to quickly create and shut down virtual systems based on demand. Which concept describes this capability?

- A. Resource scheduling
- **B. Ephemeral computing**
- C. Maintenance mode
- D. High availability

Answer: B

Explanation:

The capability to rapidly create and destroy virtual systems as demand fluctuates is known as ephemeral computing. These short-lived resources are provisioned automatically when needed and decommissioned when demand subsides.

Resource scheduling helps allocate resources but does not imply temporary lifespans. High availability ensures continuous service, and maintenance mode is used for administrative tasks.

Ephemeral computing is central to elasticity in cloud environments, reducing costs and improving scalability.

For example, containers or serverless functions may run only while needed and then disappear. This model optimizes utilization, lowers expenses, and supports modern application architectures that demand agility.

NEW QUESTION # 156

Which data retention method is used for business continuity and disaster recovery (BC/DR) backups?

- A. Monitoring and enforcement
- **B. Archiving and retrieval procedures**
- C. Data classification
- D. Local agent checks

Answer: B

Explanation:

Archiving and retrieval procedures are the data retention method used for business continuity and disaster recovery (BC/DR) backups. Managing Cloud principles describe BC/DR as a critical operational function that ensures data can be restored following system failures, cyber incidents, or natural disasters.

Archiving involves securely storing backup data in a manner that preserves integrity and availability over time. Retrieval procedures define how quickly and effectively data can be accessed and restored when needed.

Together, these procedures ensure that organizations can resume operations with minimal disruption.

The other options do not support BC/DR directly. Data classification categorizes data by sensitivity, local agent checks focus on endpoint health, and monitoring and enforcement apply to security oversight rather than retention. Therefore, archiving and retrieval procedures are essential for BC/DR backups.

NEW QUESTION # 157

An organization is sharing personal information that is defined in its privacy policy with a trusted third party.

What else should the organization communicate to the trusted third party about the personal information?

- A. A notice of any contractual obligations that do not align with the privacy policy
- B. The results of the organization's most recent privacy audit
- C. The organization's privacy policy and handling practices
- D. A copy of federal privacy laws regarding unauthorized data disclosure

Answer: C

Explanation:

When sharing personal data with a trusted third party, organizations must ensure that the recipient understands and adheres to the organization's privacy policy and handling practices. This ensures consistent treatment of personal information across entities and aligns with consent provided by individuals.

Audit results and contractual notices are internal matters, while federal laws define obligations but do not substitute for organizational policies. By explicitly sharing policies and practices, organizations reinforce accountability and ensure compliance with privacy regulations such as GDPR, HIPAA, or CCPA.

This communication sets expectations for data use, retention, and disclosure. It also provides a defensible framework in case of regulatory inquiries, showing that due diligence was performed when transferring data to third parties.
