## Quiz 2026 Salesforce Mule-Dev-301: Fantastic Latest Salesforce Certified MuleSoft Developer II Test Dumps

It is widely accepted that where there is a will, there is a way; so to speak, a man who has a settled purpose will surely succeed. To obtain the Mule-Dev-301 certificate is a wonderful and rapid way to advance your position in your career. In order to reach this goal of passing the Mule-Dev-301 exam, you need more external assistance to help yourself. We have engaged in this career for more than ten years and with our Mule-Dev-301 Exam Questions, you will not only get aid to gain your dreaming Mule-Dev-301 certification, but also you can enjoy the first-class service online.

### Salesforce Certified MuleSoft Developer II Sample Questions (Q15-Q20):

#### NEW QUESTION # 15

The flow is invoicing a target API. The API's protocol is HTTPS. The TLS configuration in the HTTP Request Configuration global element is set to None. A web client submits a request to `http://localhost:8081/vehicles`.

If the certificate of the target API is signed by a certificate authority (CA), what is true about the HTTP Request operation when the flow executes?

- A. The HTTP Request operation will always fail regardless of the CA
- B. The HTTP Request operation will succeed if the CA's certificate is present in the JRE's default keystore
- **C. The HTTP Request operation will succeed if the CA's certificate is present in the JRE's default truststore.**
- D. The HTTP Request operation will always succeed regardless of the CA

**Answer: C**

Explanation:

The HTTP Request operation will use the default truststore of the JRE to validate the certificate of the target API. If the CA's certificate is present in the truststore, the operation will succeed. Otherwise, it will fail with a handshake exception. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/tls-configuration#tls-default>

#### NEW QUESTION # 16

When implementing a synchronous API where the event source is an HTTP Listener, a developer needs to return the same correlation ID back to the caller in the HTTP response header.

How can this be achieved?

- A. Configure a custom correlation policy
- B. Enable the CorrelationID checkbox in the HTTP Listener configuration
- C. Enable the auto-generate CorrelationID option when scaffolding the flow
- **D. NO action is needed as the correlation ID is returned to the caller in the response header by default**

**Answer: D**

Explanation:

When implementing a synchronous API where the event source is an HTTP Listener, Mule automatically propagates some message attributes between flows via outbound and inbound properties. One of these attributes is correlation ID, which is returned to the caller in the response header by default as MULE\_CORRELATION\_ID. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/about-mule-message#message-attributes>

#### NEW QUESTION # 17

Which properties are mandatory on the HTTP Connector configuration in order to use the OAuth 2.0 Authorization Code grant type for authentication?

- A. External callback URL, access token URL, client ID, response refresh token
- B. Token URL, authorization URL, client ID, client secret local callback URL
- **C. External callback URL, access token URL, local authorization URL, authorization URL, client ID, client secret**
- D. External callback URL, access token URL, client ID response access token

**Answer: C**

Explanation:

To use the OAuth 2.0 Authorization Code grant type for authentication, the HTTP Connector configuration requires the following properties: token URL, authorization URL, client ID, client secret, and local callback URL. The token URL is the endpoint of the authorization server that provides access tokens. The authorization URL is the endpoint of the authorization server that initiates the user consent flow. The client ID and client secret are the credentials of the Mule application registered with the authorization server. The local callback URL is the endpoint of the Mule application that receives the authorization code from the authorization server. Reference: <https://docs.mulesoft.com/http-connector/1.6/http-authentication#oauth-2-0>

#### NEW QUESTION # 18

A new Mule project has been created in Anypoint Studio with the default settings.

Which file inside the Mule project must be modified before using Maven to successfully deploy the application?

- A. Settings.xml
- B. Mule.artifact.json
- **C. Pom.xml**
- D. Config.yaml

**Answer: C**

Explanation:

To use Maven to successfully deploy the application, the developer needs to modify the pom.xml file inside the Mule project. The pom.xml file contains the configuration and dependencies of the Mule application, as well as the deployment information such as the CloudHub region, environment, and worker size. The developer needs to specify these properties in the pom.xml file before using Maven to deploy the application. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/mmp-concept#application-deployment-descriptor>

### NEW QUESTION # 19

The HTTP Request operation raises an HTTP CONNECTIVITY error.  
Which HTTP status code and body are returned to the web client?

- A. HTTP Status Code:500.  
Body 'Error in processing your request'
- B. HTTP Status Code:500.  
Body 'Error in processing your request'
- C. HTTP Status Code:200.  
Body 'Error in processing your request'
- D. HTTP Status Code:500.  
Body 'The HTTP CONNECTIVITY Error description'

**Answer: A**

Explanation:

When the HTTP Request operation raises an HTTP CONNECTIVITY error, it triggers an on-error-continue handler that sets a payload with 'Error in processing your request'. Since no status code is explicitly set in this handler, it defaults to 500 (INTERNAL SERVER ERROR). Therefore, the web client receives an HTTP response with status code 500 and body 'Error in processing your request'. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/error-handling#on-error-continue>

### NEW QUESTION # 20

.....

Before making a final purchase decision, customers of Itcertkey can download a free demo to test the validity of the Salesforce Certified MuleSoft Developer II (Mule-Dev-301) exam questions we offer.
