DOWNLOAD the newest DumpsMaterials NCP-CN PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1I1tNzUZ3iR50CMZUwFsyLkoBKbPsC09g>

For candidate who wants a better job through obtaining a certificate, passing the exam becomes significant. Our NCP-CN Study Materials will offer you a chance like this. Our NCP-CN study guide is known for the high quality and high accuracy. We are pass guarantee and money back guarantee for our customers. If you can get the certificate, you will have a better competitive power in the job market and have more opportunity.

In fact, many candidates have the willing and ambition to pass the NCP-CN exam and achieve the certification for they want to challenge themselves to become better. The efficiency of going it alone is very low, and it is easy to go to a dead end. You really need a helper. Take a look at the development of NCP-CN Guide quiz and you will certainly be attracted to it. The advantages of NCP-CN study materials are numerous and they are all you need!

Training NCP-CN Materials | Exam NCP-CN Exercise

We have experienced education technicians and stable first-hand information to provide you with high quality & efficient NCP-CN training dumps. If you are still worried about your exam, our exam dumps may be your good choice. Our NCP-CN training dumps cover nearly 85% real test materials so that if you master our dumps questions and answers you can clear exams successfully. Don't worry over trifles. If you purchase our NCP-CN training dumps you can spend your time on more significant work.

Nutanix NCP-CN Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Conduct NKP Fleet Management: This section tests the abilities of platform administrators and cloud operations engineers in managing multiple clusters as a fleet. It focuses on configuring workspaces to organize clusters, deploying workload clusters within these workspaces, and attaching or detaching clusters as needed. Additionally, candidates must be able to configure projects for workload segmentation and manage platform applications that support the overall NKP environment.
Topic 2	<ul style="list-style-type: none"> • Prepare the Environment for an NKP Deployment: This section of the exam measures the skills of infrastructure engineers and cloud administrators and covers the initial setup tasks needed for NKP deployment. Candidates must demonstrate the ability to seed a private container registry, create a bootstrap Kubernetes cluster, and determine license tiers suitable for clusters. They also need to prepare a bastion host for secure access, build machine images or prepare nodes for deployment, and gather all necessary information to build a cluster on the target cloud or on-premises provider.

Topic 3	<ul style="list-style-type: none"> • Manage Building an NKP Cluster: This section evaluates the skills of Kubernetes administrators and platform engineers in customizing and deploying NKP clusters. Candidates must show proficiency in tailoring cluster configurations to meet specific requirements and deploying Kommander, the management platform, while applying the appropriate licenses to enable cluster features and management capabilities.
Topic 4	<ul style="list-style-type: none"> • Perform Day 2 Operations: This part assesses the expertise of site reliability engineers and cluster operators in ongoing cluster management tasks after deployment. It includes configuring authentication and authorization mechanisms, setting up logging systems, and implementing cluster backup and recovery procedures. Candidates also need to demonstrate skills in monitoring cluster performance and health, configuring autoscaling to handle workload changes, and performing lifecycle management functions such as upgrades and maintenance.

Nutanix Certified Professional - Cloud Native v6.10 Sample Questions (Q17-Q22):

NEW QUESTION # 17

A Platform Engineer works for a service provider and needs to establish access and authentication for multiple clients into an NKP cluster. Each client has their own LDAP source that should be used for authentication into the cluster. How would this be accomplished?

- A. An NKP project would be created for each client and an LDAP connector would be created for each NKP project. Users would provide the project name their company was assigned as part of their login.
- **B. An NKP workspace needs to be created for each client and an LDAP connector would be created for each NKP workspace.**
- C. A common LDAP source needs to be established and client specific groups and users need to be configured within this common LDAP provider. Then an LDAP connector would be created for this LDAP provider.
- D. The LDAP connector configuration would be modified to include an array for each client LDAP source to authenticate with. Users would provide the client name defined in the array as part of their login.

Answer: B

NEW QUESTION # 18

A Cloud Engineer is deploying an NKP management cluster and plans to deploy multiple NKP workload clusters from it. The management cluster will be on Nutanix infrastructure, but the NKP workload clusters may be deployed in multiple provisioning environments, such as:

Nutanix
AWS

Azure When the engineer deploys an NKP workload cluster in AWS, which two default behaviors will be performed by NKP on this newly-deployed cluster? (Choose two.)

- A. The NKP workload cluster will also be assigned to all of the NKP projects that have been created within the NKP workspace.
- **B. The NKP workload cluster will receive all of the GitOps sources that have been assigned to the NKP workspace.**
- C. The NKP workload cluster will receive all of the NKP RBAC policy that has been assigned to this NKP workspace.
- **D. The NKP workload cluster will be deployed all of the applications that have been enabled on this NKP workspace.**

Answer: B,D

NEW QUESTION # 19

Refer to the exhibit.

```
bovan01@Laptop-GMOCY558:~/nkp-v2.12.0/cli$ ./nkp create bootstrap
/ Creating a bootstrap cluster
Failed to create bootstrap cluster: failed to pull image "messaphaze/norvoy-bootstrap:v2.12.0": command "docker pull messaphaze/norvoy-bootstrap:v2.12.0" failed with
error: exit status 1
bovan01@Laptop-GMOCY558:~/nkp-v2.12.0/cli$ |
```

A Platform Engineer is preparing to deploy an NKP cluster in an air-gapped environment. The NKP cluster will be deployed on Nutanix infrastructure using the CAPI Nutanix provisioner (CAPX). The engineer has decided to create the bootstrap cluster first, then NIB-prepare an Ubuntu 22.04 OS image that the Linux engineering team has provided in Prism Central. After that, the engineer will deploy the NKP cluster. However, during the first step of creating a bootstrap cluster, the engineer received the error shown in the exhibit. What could be the reason?

- A. The bootstrap cluster image needs to be loaded prior to creating the bootstrap cluster.
- B. The Ubuntu 22.04 OS image needs to be NIB-prepped prior to creating the bootstrap.
- C. The nkp create bootstrap command needs to be executed as root.
- D. The CAPI provisioning method needs to be specified as part of the command nkp create bootstrap nutanix.

Answer: A

NEW QUESTION # 20

A Platform Engineer will be deploying an NKP cluster in a dark site with no Internet access. The Cloud Administrator has provided a Linux VM for this purpose, so the engineer needs to prepare this VM to be used as a bastion host. Which two actions should the engineer take to complete this task? (Choose two.)

- A. Install Docker.
- B. Install LDAP Server.
- C. Enable NTP Service.
- D. Get or create SSH Keys.

Answer: C,D

Explanation:

A bastion host in a dark site environment serves as a secure entry point for managing the NKP deployment, providing access to the cluster infrastructure without direct Internet connectivity. The NKPA course outlines the prerequisites for preparing a Linux VM as a bastion host, focusing on secure access and time synchronization, which are critical for air-gapped Kubernetes deployments.

* Get or create SSH Keys (Option B): The bastion host requires SSH keys to enable secure, passwordless access to the NKP cluster nodes and other infrastructure components (e.g., Nutanix AHV hosts). The NKPA course specifies that SSH keys must be generated or obtained and configured on the bastion host to facilitate secure communication during deployment and management tasks. The Nutanix Cloud Native (NCP-CN) 6.10 Study Guide states: "For a bastion host in an NKP dark site deployment, ensure SSH keys are created or obtained to enable secure access to cluster nodes and infrastructure." The engineer can generate SSH keys using `ssh-keygen` and distribute the public key to the target systems.

* Enable NTP Service (Option D): Time synchronization is essential in Kubernetes clusters to ensure consistent logging, certificate management, and scheduling. In a dark site with no Internet access, the bastion host must be configured to synchronize time with an internal NTP (Network Time Protocol) server or act as an NTP server itself. The NKPA course emphasizes enabling the NTP service on the bastion host to maintain accurate time across the air-gapped environment. The NCP-CN 6.10 Study Guide notes: "Enable the NTP service on the bastion host to ensure time synchronization in a dark site NKP deployment, as Kubernetes requires accurate time for proper operation." The engineer can enable NTP using commands like `systemctl enable ntpd` and configure it to use an internal time source.

Incorrect Options:

* A. Install LDAP Server: LDAP is used for centralized authentication, but it is not a requirement for a bastion host in an NKP dark site deployment. The course focuses on SSH access instead.

* C. Install Docker: While Docker is needed on Kubernetes nodes for container runtimes, the bastion host's role is to provide secure access and management, not to run containers.

NEW QUESTION # 21

NKP cluster nodes require a disk for some of its deployed components, outside of an application's persistent volume requirements. What are these components and where are they deployed?

- A. kubectl and kubelet in /var/nkp
- B. kubelet and containerd, in /opt/nkp
- C. kubectl and kubelet in /opt/nkp
- **D. kubelet and containerd in /var/lib**

Answer: D

Explanation:

According to the NKPA 6.10 documentation, the critical system components for NKP nodes are:

* kubelet

* containerd These components are deployed in the standard Linux path: /var/lib.

Exact extract from the documentation:

"The kubelet and containerd services require disk space in /var/lib on the host operating system. It's essential to allocate sufficient storage in /var/lib to accommodate these core Kubernetes components." Reference:
