## Microsoft Information Protection Administrator Sample Questions (Q36-Q41):

### NEW QUESTION # 36

Case Study 1 - Fabrikam, Inc

Overview

Fabrikam, Inc. is a consulting company that has a main office in Montreal and six branch offices in New York, Seattle, Miami, Houston, Los Angeles, and Vancouver.

Existing Environment

Cloud Environment

Fabrikam has a Microsoft 365 tenant that contains the following resources:

An Azure Active Directory (Azure AD) tenant that syncs to an on-premises Active Directory domain named corp.fabrikam.com  
Microsoft Cloud App Security connectors configured for all supported cloud applications used by the company  
Some users have company Dropbox accounts.

Compliance Configuration

Fabrikam has the following in the Microsoft 365 compliance center:

A data loss prevention (DLP) policy is configured. The policy displays a tooltip to users. Users can provide a business justification to override a DLP policy violation.

The Azure Information Protection unified labeling scanner is installed and configured.

A sensitivity label named Fabrikam Confidential is configured.

An existing third-party records management system is managed by the compliance department.

Human Resources (HR) Management System

The HR department has an Azure SQL database that contains employee information. Each employee has a unique 12-character alphanumeric ID. The database contains confidential employee attributes including payroll information, date of birth, and personal contact details.

On-Premises Environment

You have an on-premises file server that runs Windows Server 2019 and stores Microsoft Office documents in a shared folder named Data.

All end-user computers are joined to the corp.fabrikam.com domain and run a third-party antimalware application.

Business Processes

Sales Contracts

Users in the sales department receive draft sales contracts from customers by email. The sales contracts are written by the customers and are not in a standard format.

Employment Applications

Employment applications and resumes are received by HR department managers and stored in either mailboxes, Microsoft SharePoint Online sites, OneDrive for Business folders, or Microsoft Teams channels.

The employment application form is downloaded from SharePoint Online and a serial number is assigned to each application.

The resumes are written by the applicants and are in any format.

Requirements

HR Requirements

You need to create a DLP policy that will notify the HR department of a DLP policy violation if a document that contains confidential employee attributes is shared externally. The DLP policy must use an Exact Data Match (EDM) classification derived from a CSV export of the HR department database.

The HR department identifies the following requirements for handling employment applications:

Resumes must be identified automatically based on similarities to other resumes received in the past.

Employment applications and resumes must be deleted automatically two years after the applications are received.

Documents and emails that contain an application serial number must be identified automatically and marked as an employment application.

Sales Requirements

A sensitivity label named Sales Contract must be applied automatically to all draft and finalized sales contracts.

Compliance Requirements

Fabrikam identifies the following compliance requirements:

All DLP policies must be applied to computers that run Windows 10, with the least possible changes to the computers.

Users in the compliance department must view the justification provided when a user receives a tooltip notification for a DLP violation.

If a document that has the Fabrikam Confidential sensitivity label applied is uploaded to Dropbox, the file must be deleted automatically.

The Fabrikam Confidential sensitivity label must be applied to existing Microsoft Word documents in the Data shared folder that have a document footer containing the following string: Company use only.

Users must be able to manually select that email messages are sent encrypted. The encryption will use Office 365 Message Encryption (OME) v2. Any email containing an attachment that has the Fabrikam Confidential sensitivity label applied must be encrypted automatically by using OME.

Existing policies configured in the third-party records management system must be replaced by using Records management in the Microsoft 365 compliance center. The compliance department plans to export the existing policies, and then produce a CSV file that contains matching labels and policies that are compatible with records management in Microsoft 365.

The CSV file must be used to configure records management in Microsoft 365.

Executive Requirements

You must be able to restore all email received by Fabrikam executives for up to three years after an email is received, even if the email was deleted permanently.

Hotspot Question

You need to recommend an information governance solution that meets the HR requirements for handling employment applications and resumes.

What is the minimum number of information governance solution components that you should create? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

You can apply the same retention label to both the application and resumes. So create one retention label and 2 auto-apply label policies.

### NEW QUESTION # 37

You create a sensitivity label as shown in the Sensitivity Label exhibit.

You create an auto-labeling policy as shown in the Auto Labeling Policy exhibit.

A user sends the following email:

From: user1@contoso.com

To: user2@fabrikam.com

Subject: Address List

Message Body:

Here are the lists that you requested.

Attachments:

<<File1.docx>>

<<File2.xml>>

Both attachments contain lists of IP addresses.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

### NEW QUESTION # 38

You have a Microsoft 365 E5 subscription that has data loss prevention (DLP) implemented.

You need to create a custom sensitive info type. The solution must meet the following requirements:

\* Match product serial numbers that contain a 10-character alphanumeric string.

\* Ensure that the abbreviation of SN appears within six characters of each product serial number.

\* Exclude a test serial number of 1111111111 from a match.

Which pattern settings should you configure for each requirement? To answer, drag the appropriate settings to the correct requirements. Each setting may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

### Answer:

Explanation:

Explanation:

### NEW QUESTION # 39

You have a Microsoft 365 tenant.

You have a Microsoft SharePoint Online site that contains employment contracts in a folder named EmploymentContracts. All the files in EmploymentContracts are marked as records.

You need to recommend a process to ensure that when a record is updated, the previous version of the record is kept as a version of the updated record.

What should you recommend?

- A. Create a new label policy associated to an event that will apply to the record.
- **B. Unlock the record, modify the record, and then lock the record.**
- C. Upload an updated file plan that contains the record definition.
- D. Create a copy of the record and enter a version in the file metadata.

### Answer: B

Explanation:

## NEW QUESTION # 40

Hotspot Question

You have a Microsoft 365 E5 subscription that contains the groups shown in the following table.

The subscription contains the resources shown in the following table.

You create a sensitivity label named Label 1.

You need to publish Label1 and have the label apply automatically.

To what can you publish Label1, and to what can Label1 be auto-applied? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

## NEW QUESTION # 41
