We guarantee that if you study our 010-160 guide materials with dedication and enthusiasm step by step, you will desperately pass the exam without doubt. As the authoritative provider of study materials, we are always in pursuit of high pass rate of 010-160

Practice Test compared with our counterparts to gain more attention from potential customers. We believe in the future, our 010-160 study torrent will be more attractive and marvelous with high pass rate.

Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q43-Q48):

NEW QUESTION # 43

Running the command `rm Downloads` leads to the following error:

`rm: cannot remove 'Downloads/': Is a directory`

Which of the following commands can be used instead to remove `Downloads`, assuming `Downloads` is empty? (Choose two correct answers.)

- A. `dir -r Downloads`
- B. `rm -r Downloads`
- C. `rmdir Downloads`
- D. `undir Downloads`
- E. `rem Downloads`

Answer: B,C

NEW QUESTION # 44

Which of the following are typical services offered by public cloud providers? (Choose three.)

- A. Software as a Service (SaaS)
- B. Infrastructure as a Service (IaaS)
- C. Platform as a Service (PaaS)
- D. Internet as a Service (IaaS)
- E. Graphics as a Service (GaaS)

Answer: A,B,C

NEW QUESTION # 45

What is true about a recursive directory listing?

- A. It includes ownership information for the files.
- B. It includes a preview of content for each file in the directory.
- C. It includes the content of sub-directories.
- D. It includes the permissions of the directory listed.
- E. It includes details of file system internals, such as inodes.

Answer: C

NEW QUESTION # 46

A directory contains the following files:

```
□ What would be the output of the following shell script?  
for file in *.txt  
□
```

- A. c.cav
- B. *.txt
- C. A.txt
- D. txt
- E. a b
- F. A.txt

Answer: C

Explanation:

Explanation

The shell script uses a for loop to iterate over the files that match the pattern *.txt in the current directory. The pattern *.txt means any file name that ends with .txt, regardless of the case. The loop body simply prints the value of the variable file, which holds the name of the current file in each iteration. Therefore, the output of the shell script would be the names of the files that end with .txt, one per line. In this case, the files are A.txt and b.txt, so the output would be:

a.txt b.txt

This corresponds to option E. The other options are incorrect for the following reasons:

* Option A: *.txt is not the output of the shell script, but the pattern that the loop uses to match the files.

The shell expands the pattern to the actual file names before executing the loop.

* Option B: a and b are not the names of the files, but the first characters of the file names. The loop prints the whole file name, including the extension.

* Option C: c.cav is not a file that matches the pattern *.txt, because it has a different extension. The loop ignores files that do not end with .txt.

* Option D: A.txt is only one of the files that matches the pattern *.txt, but not the only one. The loop prints both A.txt and b.txt.

NEW QUESTION # 47

A new server needs to be installed to host services for a period of several years. Throughout this time, the server should receive important security updates from its Linux distribution.

Which of the following Linux distributions meet these requirements? (Choose two.)

- A. Red Hat Enterprise Linux
- B. Ubuntu Linux LTS
- C. Ubuntu Linux non-LTS
- D. Fedora Linux
- E. Debian GNU/Linux Unstable

Answer: A,B

Explanation:

Explanation

Ubuntu Linux LTS and Red Hat Enterprise Linux are two Linux distributions that meet the requirements of hosting services for a period of several years and receiving important security updates from their Linux distribution. LTS stands for Long Term Support, which means that these versions of Ubuntu Linux are supported by Canonical, the company behind Ubuntu, for five years with security patches, bug fixes, and software updates¹. Red Hat Enterprise Linux is a commercial Linux distribution that offers a stable and secure platform for enterprise applications, with a 10-year life cycle and regular security updates from Red Hat, the company behind RHEL². Fedora Linux, Debian GNU/Linux Unstable, and Ubuntu Linux non-LTS are not suitable for the requirements, because they have shorter support cycles and are more focused on providing the latest features and software versions, rather than stability and security. Fedora Linux releases a new version every six months and each version is supported for 13 months³. Debian GNU/Linux Unstable is the development branch of Debian, which is constantly updated with new packages and changes, but is not intended for production use⁴. Ubuntu Linux non-LTS releases a new version every six months and each version is supported for nine months¹. References:
