

Reliable Analytics-Admn-201 Exam Preparation | Analytics-Admn-201 Study Group

P.S. Free 2026 Salesforce Analytics-Admn-201 dumps are available on Google Drive shared by PassSureExam: <https://drive.google.com/open?id=1KWtJvbrVVFZEUz120f9hCkwpjimTffqo>

If you're still learning from the traditional old ways and silently waiting for the test to come, you should be awake and ready to take the exam in a different way. Study our Analytics-Admn-201 training materials to write "test data" is the most suitable for your choice, after recent years show that the effect of our Analytics-Admn-201 guide dump has become a secret weapon of the examinee through qualification examination, a lot of the users of our Analytics-Admn-201 guide dump can get unexpected results in the examination. It can be said that our Analytics-Admn-201 study questions are the most powerful in the market at present, not only because our company is leader of other companies, but also because we have loyal users. Analytics-Admn-201 training materials are not only the domestic market, but also the international high-end market. We are studying some learning models suitable for high-end users. Our research materials have many advantages.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.
Topic 2	<ul style="list-style-type: none"> Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.
Topic 3	<ul style="list-style-type: none"> Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.
Topic 4	<ul style="list-style-type: none"> Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.

Topic 5	<ul style="list-style-type: none"> • Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.

Salesforce Analytics-Admn-201 Study Group & Analytics-Admn-201 Test Simulator Online

We are committed to provide you the best and the latest Analytics-Admn-201 training materials for you. Quality of the Analytics-Admn-201 exam dumps has get high evaluation among our customers, they think highly of it, since we help them pass the exam easily. Furthermore if we have the updated version, our system will send the Latest Analytics-Admn-201 Exam Dumps to your email address automatically, you don't need to worry about missing the latest version, you just need to concentrate your attention on practicing, and we will do the rest for you.

Salesforce Certified Tableau Server Administrator Sample Questions (Q54-Q59):

NEW QUESTION # 54

You have an existing group subscription. You add a user to the group. What statement correctly describes the result?

- A. The subscription will continue to include only the members of the group at the time the subscription was made
- **B. The subscription updates automatically to include the new user**
- C. The creator of the subscription receives notice of the change and must manually edit the subscription to reflect the new group membership
- D. The administrator receives a notice to approve or deny adding the user to the subscription

Answer: B

Explanation:

Subscriptions in Tableau Server deliver workbook views to users via email on a schedule. Group subscriptions apply to all group members-let's unpack this:

* Group Subscription Mechanics:

* Created via Workbooks > Actions > Subscribe > Select Group.

* Delivers content to all users in the group at the time the subscription runs (e.g., daily PDF).

* Dynamic: Membership updates (additions/removals) are reflected automatically on the next run.

* Option C (The subscription updates automatically to include the new user): Correct.

* Details: When you add a user to the group (e.g., via Users > Groups > Add Users), Tableau Server's subscription process queries the group's current membership at runtime. The new user receives the subscription on the next scheduled delivery-no manual action needed.

* Example: Group "Sales" has a 9 AM subscription. Add a user at 8 AM-they get the email tomorrow at 9 AM.

* Option A (Admin receives notice to approve/deny): Incorrect.

* Why: No approval workflow exists for group membership changes in subscriptions-it's automatic.

* Option B (Creator must manually edit): Incorrect.

* Why: Subscriptions are tied to the group, not a static user list-manual edits aren't required for membership changes.

* Option D (Only members at creation time): Incorrect.

* Why: This would be true for individual subscriptions (static list), but group subscriptions are dynamic.

Why This Matters: Dynamic group subscriptions streamline content delivery as teams evolve, reducing admin overhead.

Reference: Tableau Server Documentation - "Manage Subscriptions" (<https://help.tableau.com/current/server/en-us/subscribe.htm>).

NEW QUESTION # 55

A user reports that a newly-published workbook runs slowly. What should you ask the user first to investigate the problem?

- A. Did you enable caching on the workbook?
- B. Does the workbook always run slowly or does performance vary?
- C. How many times have you opened the workbook in Tableau Server?
- **D. Does it run any faster in Tableau Desktop?**

Answer: D

Explanation:

When a user reports slow performance for a newly-published workbook on Tableau Server, troubleshooting requires isolating the cause-e.g., data source issues, server load, workbook design, or caching. The first question should establish a baseline to narrow the scope. Let's analyze this step-by-step with depth:

* Performance Context:

* A workbook's speed depends on:

* Data Source: Query complexity, size, network latency (e.g., database vs. extract).

* Workbook Design: Filters, calculations, dashboard complexity.

* Server Resources: VizQL rendering, Backgrounder load, caching

* "Newly-published" implies it's not yet optimized or cached on the server.

* Option A (Does it run any faster in Tableau Desktop?): Correct.

* Why First: Comparing Desktop vs. Server performance is the most foundational diagnostic step:

* Desktop Baseline: If it's slow in Desktop (local machine), the issue likely lies in the workbook (e.g., complex queries, large data) or data source (e.g., slow database)-not Server-specific.

* Server Difference: If it's fast in Desktop but slow on Server, the problem could be server-side (e.g., resource contention, network latency to the data source from Server).

* Practical Next Steps:

* Slow in Desktop: Optimize workbook (e.g., simplify calcs, use extracts).

* Fast in Desktop: Check Server (e.g., caching, VizQL load).

* Why Critical: Establishes whether the issue is inherent to the workbook/data or introduced by Server-guides all further investigation.

* Option B (Does the workbook always run slowly or does performance vary?): Useful but secondary.

* Why Not First: Variability (e.g., slow at peak times) points to server load, but without a Desktop baseline, you can't rule out workbook design. It's a follow-up question after A.

* Detail: Variability might suggest caching or concurrent user impact, but it assumes Server-side causation prematurely.

* Option C (How many times have you opened the workbook in Tableau Server?): Less relevant initially.

* Why Not First: Frequency of access might affect caching (first load is slower, subsequent loads faster), but it's too specific and doesn't isolate Desktop vs. Server. It's a niche follow-up.

* Option D (Did you enable caching on the workbook?): Misleading and incorrect.

* Why Not First: Caching is server-managed (e.g., VizQL cache settings via tsm data-access caching set), not a user-toggle per workbook. Users don't "enable" it-admins do. Plus, it's premature without a baseline.

Why This Matters: Starting with Desktop performance cuts through assumptions, pinpointing whether the root cause is client-side (workbook/data) or server-side-essential for efficient resolution in production.

NEW QUESTION # 56

You activate the same Tableau Server product key on three installations for Dev, Test, and Production. You plan to move the Test environment to new hardware. What is the recommended workflow for managing the product key?

- A. Install and activate Tableau Server on the new hardware, and then deactivate it on the old hardware
- **B. Deactivate the product key on the existing Test environment, and then install and activate Tableau Server on the new hardware**
- C. Install and activate Tableau Server on the new hardware and keep the existing Test environment as a backup
- D. Install and activate Tableau Server on the new hardware, and then run the following script in the old environment: `tableau-server-obliterate.cmd -y -y -y`

Answer: B

Explanation:

Tableau Server's licensing ties product keys to specific machines. Moving an environment requires managing activations to stay compliant. Let's break this down:

* Licensing Rules:

* A product key can be activated on multiple machines (e.g., Dev, Test, Prod), but only up to the licensed limit (typically 3 for such setups).

* Deactivation frees the key for reuse elsewhere.

* Recommended Workflow:

* Deactivate first: Use tsm licenses deactivate on the old Test machine to release the key.

* Then activate: Install on the new hardware and activate with tsm licenses activate -k <key>.

* Why: Ensures compliance and avoids activation conflicts (e.g., exceeding the key's limit).

* Option B (Deactivate on Test, then install/activate on new hardware): Correct.

* Steps:

* On old Test: tsm licenses deactivate.

* Install Tableau Server on new hardware.

* On new Test: tsm licenses activate -k <key>.

* Benefit: Clean, compliant transfer-preserves license integrity.

* Option A (Activate new, then deactivate old): Incorrect.

* Risk: If the key's limit is reached (e.g., 3 activations), the new activation fails until deactivation occurs. Order matters.

* Option C (Activate new, keep old as backup): Incorrect.

* Issue: Exceeds license limit (4 activations) and risks non-compliance. Backup requires deactivation or a separate key.

* Option D (Activate new, obliterate old): Incorrect.

* Details: tableau-server-obliterate.cmd wipes the entire install (data, config)-overkill and doesn't formally deactivate the key via TSM, potentially leaving licensing inconsistent.

Why This Matters: Proper license management prevents activation errors and ensures legal use across environments.

Reference: Tableau Server Documentation - "Manage Product Keys" (https://help.tableau.com/current/server/en-us/license_manage.htm).

NEW QUESTION # 57

Which two commands are valid and complete commands? (Choose two.)

- A. tsm maintenance ziplogs
- B. tsm maintenance backup
- C. tsm maintenance cleanup
- D. tsm maintenance restore

Answer: A,C

Explanation:

TSM commands manage Tableau Server maintenance-let's validate their syntax:

* Command Requirements:

* Some need arguments (e.g., file paths); others are standalone.

* Valid and Complete: Must work as-is without errors.

* Option C (tsm maintenance cleanup): Correct.

* Details: Removes temporary files and old logs-no arguments required (optional flags like -l exist).

* Use: tsm maintenance cleanup-runs fully.

* Option D (tsm maintenance ziplogs): Correct.

* Details: Creates a zip of logs (e.g., tsm-logs.zip)-no arguments needed (optional -d for date range).

* Use: tsm maintenance ziplogs-complete and valid.

* Option A (tsm maintenance backup): Incorrect.

* Why: Requires -f <filename>.tsbak (e.g., tsm maintenance backup -f backup.tsbak)-incomplete without it.

* Option B (tsm maintenance restore): Incorrect.

* Why: Needs -f <filename>.tsbak (e.g., tsm maintenance restore -f backup.tsbak)-not standalone.

Why This Matters: Correct syntax ensures maintenance tasks execute without errors-critical for server health.

Reference: Tableau Server Documentation - "TSM Maintenance Commands" (https://help.tableau.com/current/server/en-us/cli_maintenance_tsm.htm).

NEW QUESTION # 58

What are two features of the Tableau Server user-based license? (Choose two.)

- A. A subscription license
- B. Enables distinct user roles
- C. A perpetual license
- D. Restricts the number of machine cores you can deploy

Answer: A,B

Explanation:

Tableau Server's user-based licensing model assigns licenses to individual users (Creator, Explorer, Viewer) rather than machines or cores. Key features include:

- * Subscription license: Licenses are typically subscription-based, renewed annually or monthly, aligning with Tableau's pricing model.
- * Distinct user roles: It supports three roles (Creator, Explorer, Viewer), each with specific capabilities, enabling granular access control.
- * Option A (A subscription license): Correct. User-based licenses are subscription-based by default.
- * Option B (Enables distinct user roles): Correct. The model defines Creator, Explorer, and Viewer roles.
- * Option C (Restricts the number of machine cores): Incorrect. This applies to core-based licensing, not user-based.
- * Option D (A perpetual license): Incorrect. Perpetual licenses were phased out; user-based licenses are subscription-based as of recent models.

Reference: Tableau Server Documentation - "Licensing Overview" (https://help.tableau.com/current/server/en-us/license_usage.htm).

NEW QUESTION # 59

.....

PassSureExam makes your Analytics-Admn-201 exam preparation easy with its various quality features. Our Analytics-Admn-201 exam braindumps come with 100% passing and refund guarantee. PassSureExam is dedicated to your accomplishment, hence assures you successful in Analytics-Admn-201 Certification exam on the first try. If for any reason, a candidate fails in Analytics-Admn-201 exam then he will be refunded his money after the refund process. Also, we offer 1 year free updates to our Analytics-Admn-201 Exam esteemed user, these updates are applicable to your account right from the date of purchase. 24/7 customer support is favorable to candidates who can email us if they find any ambiguity in the Analytics-Admn-201 exam dumps, our support will merely reply to your all Analytics-Admn-201 exam product related queries.
