Juniper Mist AI Wireless, Specialist (JNCIS-MistAI-Wireless) Sample Questions (Q77-Q82):

NEW QUESTION # 77

Which signal modulation scheme provides the highest data rate level for 802.11ax devices?

- A. 256 QAM
- B. 64 QAM
- C. 4096 QAM
- D. 1024 QAM

Answer: D

Explanation:

In Juniper Networks Mist AI Wireless, understanding modulation schemes is essential for designing and operating high-performance

Wi-Fi 6 (802.11ax) networks. Modulation directly affects how much data can be transmitted per symbol, and therefore determines the maximum achievable data rates under optimal RF conditions.

802.11ax introduces 1024-QAM (Quadrature Amplitude Modulation) as its highest supported modulation scheme. With 1024-QAM, each symbol encodes 10 bits of data, which represents a significant increase compared to earlier standards. For reference:

- * 64-QAM (used in earlier standards) carries 6 bits per symbol

- * 256-QAM (introduced in 802.11ac) carries 8 bits per symbol

- * 1024-QAM increases this to 10 bits per symbol

This higher bit density allows Wi-Fi 6 devices to achieve higher peak throughput, especially in environments with excellent signal quality. However, 1024-QAM requires very high Signal-to-Noise Ratio (SNR) and low interference to function reliably. As a result, it is typically achieved only when clients are close to the access point and RF conditions are clean.

Mist AI Wireless continuously monitors client RSSI, SNR, retransmissions, and modulation rates through advanced telemetry. Using this data, Mist can determine whether clients are successfully operating at higher modulation levels like 1024-QAM or are falling back to lower schemes due to RF impairments. This insight directly feeds into SLEs and AI-driven recommendations for RF tuning, AP placement, and channel planning.

The incorrect options are explained as follows:

- * 64-QAM and 256-QAM are valid modulation schemes but do not provide the highest data rates in 802.11ax.

- * 4096-QAM is not supported by the 802.11ax standard and is therefore invalid.

Thus, 1024-QAM is the modulation scheme that provides the highest data rate level for 802.11ax devices.
