Quiz Unparalleled New C1000-185 Brindumps Free - IBM watsonx Generative AI Engineer - Associate Customizable Exam Mode

If you are having the same challenging problem, don't worry, IBM is here to help. Our direct and dependable IBM Treasury with IBM watsonx Generative AI Engineer - Associate Exam Questions in three formats will surely help you pass the IBM Treasury with C1000-185 certification exam. Because this is a defining moment in your career, do not undervalue the importance of our Treasury with IBM watsonx Generative AI Engineer - Associate (C1000-185) exam dumps. Profit from the opportunity to get these top-notch exam questions for the C1000-185 certification test.

IBM watsonx Generative AI Engineer - Associate Sample Questions (Q338-Q343):

NEW QUESTION # 338

You are deploying a new version of a generative AI model in IBM Watsonx, and you want to maintain the integrity of prompt versioning throughout the deployment lifecycle.

Which of the following methods is the most effective for ensuring that the correct prompt version is used with the corresponding model version in production?

- A. Use the latest available prompt version for every deployment, without specifying an exact version
- **B. Implement model registry tags that associate a specific prompt version with each model version during deployment.**
- C. Use semantic versioning for both the model and the associated prompts, and track them independently in separate systems.
- D. Hard-code the prompt within the model deployment script to ensure that the correct prompt is always used

Answer: B

NEW QUESTION # 339

When debating the drawbacks of soft prompts in a generative AI application, which of the following is the most significant challenge compared to hard prompts?

- **A. Soft prompts introduce more complexity during the training phase, as the model must learn embeddings that are not inherently interpretable by humans.**
- B. Soft prompts require more human intervention during generation because they depend on predefined patterns and rules for guidance.
- C. Soft prompts offer simpler debugging processes because the learned embeddings are directly linked to specific model behaviors and outputs.
- D. Soft prompts significantly limit the flexibility of the model because they are tied to specific tasks, unlike hard prompts which can generalize to various scenarios.

Answer: A

NEW QUESTION # 340

In the context of decoding methods in IBM Watsonx Generative AI, both top-k and top-p sampling are used to control the output of the model.

Which of the following statements correctly distinguishes between top-k and top-p sampling?

- **A. Top-p sampling allows for a more flexible token selection process based on cumulative probabilities, while top-k limits token selection to a fixed number of top choices.**
- B. Top-k sampling samples from a dynamic range of tokens, while top-p sampling restricts choices to a fixed number of tokens.
- C. Both top-k and top-p sampling ensure that no tokens are selected with a probability below the set threshold, regardless of their context.
- D. Top-p sampling ensures deterministic outputs, whereas top-k sampling guarantees random selection from the entire vocabulary.

Answer: A

NEW QUESTION # 341

You are fine-tuning a generative AI model in IBM Watsonx and need to define appropriate stopping criteria to ensure the generated text is relevant and coherent.

Which of the following would be an example of a valid stopping criterion for a text generation task?

- A. The model will stop generating text once it detects a repetitive sequence of words or phrases, automatically cutting off redundancy.
- B. The model will stop generating text once a predefined number of characters is reached, ensuring that the output does not exceed a set length.
- **C. The model will stop generating text when it encounters a special end-of-sequence token or punctuation such as a period or question mark.**
- D. The model will stop generating text once the average probability of each word in the output falls below a 50% threshold.

Answer: C

NEW QUESTION # 342

You are optimizing a generative AI prompt for creative content generation, but you want to ensure that outputs with the same prompt can vary slightly across multiple runs to maintain freshness in the responses.

Which parameter should you adjust to strike a balance between random variability and consistent quality?

- A. Temperature = 0.1, Random Seed unset
- B. Max Tokens = 300, Random Seed set to 42
- **C. Top-p = 0.9, Temperature = 1.0, Random Seed unset**
- D. Set a fixed Random Seed to zero

Answer: C

NEW QUESTION # 343
