1Z0-1067-25試験関連赤本 & 1Z0-1067-25合格体験談

優秀な資料を利用すれば、短時間の準備をしても、高得点で試験に合格することができます。1Z0-1067-25試験の準備もそのとおりです。資料を探しているとき、資料の品質は大切だと思います。我々JPNTestの1Z0-1067-25資料はIT認定試験の改革によって更新していますから、お客様は試験の改革に心配する必要がありません。お客様は購入した前に、我々のウェブサイトでは1Z0-1067-25問題集のサンプルを無料でダウンロードして自分の要求と一致するかどうか確認することができます。

Oracle 1Z0-1067-25 認定試験の出題範囲:

トピック	出題範囲
トピック 1	Utilizing Configuration Management Tools: This section of the exam measures the skills of the target audience] and focuses on configuring cloud resources efficiently. It covers the use of configuration management tools for automating resource setup and cloud-init for initializing compute instances, ensuring proper configuration from the start.

トピック 2	Deploying and Managing Resources: This section of the exam covers the deployment and management of core OCI services. It focuses on manual provisioning, using the OCI Command Line Interface (CLI) for managing resources, and utilizing infrastructure as code to create consistent and repeatable deployments.
トピック 3	Implementing Observability: This section of the exam focuses on monitoring and maintaining cloud infrastructure. It covers implementing Metric Query Language (MQL) for analyzing performance data, setting up alarms and notifications for system events, and performing health checks to ensure the stability of cloud services.
トピック 4	Implementing Reliability and Business Continuity: This section of the exam focuses on ensuring system reliability and continuity. It covers implementing scalability and elasticity for handling workload demands, automating failover mechanisms for high availability, and applying data retention strategies for long-term storage and recovery.
トピック 5	Optimizing Cost and Performance: This section of the exam covers strategies for optimizing cost and performance in OCI. It includes implementing cost-saving measures, improving resource efficiency, and setting budgets and compartment quotas to manage cloud expenditures effectively.

Oracle Cloud Infrastructure 2025 Cloud Ops Professional 認定 1Z0-1067-25 試験問題 (Q77-Q82):

質問 # 77

Your application is using an Object Storage bucket named app-data in the namespace vision, to store both persistent and temporary data. Every week all the temporary data should be deleted to limit the storage consumption. Currently you need to navigate to the Object Storage page using the web console, select the appropriate bucket to view all the objects and delete the temporary ones. To simplify the task you have configured the application to save all the temporary data with /temp prefix. You have also decided to use the Command Line Interface (CLI) to perform this operation. What is the command you should use to speed up the data cleanup? (Choose the best answer.)

- A. `oci os object delete app-data in vision where prefix = /temp`
- B. `oci objectstorage bulk-delete -ns vision -bn app-data --prefix /temp -force`
- C. `oci os object bulk-delete -ns vision -bn app-data --prefix /temp --force`
- D. `oci os object delete -ns vision -bn app-data --prefix /temp`

正解: C

質問 # 78

You launched a Linux compute instance to host the new version of your company website via Apache Httpd server on HTTPS (port 443). The instance is created in a public subnet along with other instances. The default security list associated to the subnet is:

Ingress					Egress				
CIDR	IP Protocol	Source Port	Destination Port	State	CIDR	IP Protocol	Source Port	Destination Port	State
0.0.0.0/0	TCP	All	22	Stateful	0.0.0.0/0	All			Stateful
0.0.0.0/0	ICMP			Stateful					

- A. Create a Network Security Group (NSG), add a stateful rule to allow ingress access on port 443, and associate it with the instance that hosts the company website.
- B. Create an NSG, add a stateful rule to allow ingress access on port 443, and associate it with the public subnet that hosts the company website.
- C. You want to allow access to the company website from public internet without exposing websites eventually hosted on the other instances in the public subnet. Which action would you take to accomplish the task? (Choose the best answer.)
- D. In the default security list, add a stateful rule to allow ingress access on port 443.

正解: A

解説:

Create a new security list with a stateful rule to allow ingress access on port 443 and associate it with the public subnet.

質問 # 79

(CHK) You are launching a Windows server in your Oracle Cloud Infrastructure (OCI) tenancy. You provided a startup script during instance initialization, but it was not executed successfully. What is a possible reason for this error? (Choose the best answer.)

- A. Wrote a custom script which tried to install GPU drivers.
- B. Didn't include anything in user_data.
- **C. Ran a cloudbase-init script instead of cloud-init.**
- D. Specified a #directive on the first line of your script.

正解: C

質問 # 80

You use a bucket in Object Storage to store backups of a database. Versioning is enabled on these objects, so that every time you take a new backup, it creates a new version. You add the following life-cycle policy rule: { "action": "DELETE", "is-enabled": true, "name": "Delete-Rule", "object-name-filter": null, "target": "objects", "time-amount": 60, "time-unit": "DAYS" } Which option is true regarding this rule?

- A. 60 days after the initial creation, any object will be deleted. Deletion marks the latest version as deleted but does not physically delete it.
- B. 60 days after the initial creation, any object will be deleted. Deletion will physically delete all versions of the object.
- C. Once any specific version is 60 days old, it will be deleted. Deletion will physically delete the data.
- **D. If 60 days passes for an object without a new version being created, it will be deleted. Deletion marks the latest version as deleted but does not physically delete it.**

正解: D

質問 # 81

You have received an email from your manager to provision new resources on Oracle Cloud Infrastructure (OCI). When researching OCI, you determined that you should use OCI Resource Manager. Since this is a task that will be done multiple times for development, test, and production. You will need to create a command that can be re-used. Which CLI command can be used in this situation? (Choose the best answer.)

- A. oci resource-manager stack update --compartment-id <compartment_OCID> \ --config-source prod.zip --variables file://variables.json \ --display-name "Production stack build" \ --description Creating new Production environment
- **B. oci resource-manager stack create --compartment-id <compartment_OCID> \ --config-source prod.zip --variables file://variables.json \ --display-name "Production stack build" \ --description Creating new Production environment**
- C. oci resource-manager stack update --tenancy-id <tenancy_OCID> \ --config-source prod.zip --variables file://variables.json \ --display-name "Production stack build" \ --description Creating new Production environment
- D. oci resource-manager stack create --tenancy-id <tenancy_OCID> \ --config-source prod.zip --variables file://variables.json \ --display-name Production stack build \ --description Creating new Production environment

正解: B
