Free PDF Adobe - Useful Accurate AD0-E725 Answers

We have a professional team to collect the first-hand information for the AD0-E725 study materials. We can ensure you that what you receive is the latest version for the AD0-E725 exam dumps. We are strict with quality and answers of exam dumps. Besides, we offer you free update for one year, and you can get the latest information about AD0-E725 Exam Dumps. We also have online and offline chat service stuff to answer all the questions. If you have any questions about AD0-E725 exam materials, just contact us, we will give you reply as soon as we can.

Adobe AD0-E725 Exam Syllabus Topics:

Topic	Details
Topic 1	Cloud: This section of the exam measures the skills of Cloud Architects and covers the deployment and management of Adobe Commerce on cloud infrastructure. It requires explaining the fundamental cloud architecture, performing setup and configuration tasks, and utilizing the Adobe Commerce Cloud CLI tool to manage the environment effectively.
Topic 2	Section 1: Architecture: This section of the exam measures the skills of Backend Developers and covers the core structural concepts of Adobe Commerce. It involves demonstrating effective cache implementation, understanding key code components like plugins and observers, and managing multi-site configurations on a single instance. The domain also includes explaining the use of Git patches, critical security features, the CRON scheduling system, and how indexing functions within the platform.
Topic 3	- External Integrations: This section of the exam measures the skills of Integration Specialists and focuses on connecting Adobe Commerce with external SaaS services. It encompasses the skills needed to customize data flows, utilize Adobe App Builder for extensibility, and implement Adobe I - O events and webhooks to create automated and connected business processes.
Topic 4	Customizations: This section of the exam measures the skills of Solutions Engineers and involves modifying and extending platform functionality. This includes customizing core areas like the product catalog, checkout process, and admin panel, as well as manipulating data entities, customizing APIs, working with message queues, and writing integration tests to ensure code quality and functionality.

Adobe Commerce Developer Expert Sample Questions (Q42-Q47):

NEW QUESTION # 42

An Adobe Commerce Developer is tasked with adding a custom tax calculation to the checkout process. In addition to core tax calculations, a legacy code extending core tax calculation classes is also found. The Developer wants to utilize Magento's dependency injection system effectively to meet requirements, ensuring the solution works without modifying the existing core and legacy classes.

What should the Developer implement to achieve this?

- A. Constructor arguments
- B. Preferences
- **C. Virtual types**

Answer: C

Explanation:

The correct approach is Virtual types.

Virtual types allow developers to configure existing classes with different constructor arguments and create multiple variations of the same class without modifying the core or legacy code.

Preferences (C) would replace one class with another entirely, which could break the legacy functionality.

Constructor arguments (A) are part of DI but don't allow multiple variants of the same class like virtual types do.

Reference:

Adobe Commerce DevDocs - Virtual types

NEW QUESTION # 43

A Developer needs to subscribe to the customer_register_success event.

How should the observer be declared in the module?

- **A. Declare in etc/events.xml:**

```
<event name="customer_register_success">  
  <observer name="vendor_module_customer_register_observer" instance="Vendor\Module\Observer\CustomerRegisterSuccess"/>  
</event>
```

- B. Declare in etc/observer.xml:
`<observer name="\vendor_module_customer_register_observer">`
`<event name="customer_register_success" instance="`
`Vendor\Module\Observer\CustomerRegisterSuccess" />`
`</observer>`
- C. Declare in etc/events.xml:
`<observer name="customer_register_success">`
`<event name="\vendor_module_customer_register_observer" instance="`
`Vendor\Module\Observer\CustomerRegisterSuccess" />`
`</observer>`

Answer: A

NEW QUESTION # 44

An Adobe Commerce Developer is tasked with adding additional data to an order entity in REST API. Remembering upgradability, which solution should the developer implement?

- A. Use API events.
- **B. Use extension attributes.**
- C. Use interceptor plugins.

Answer: B

Explanation:

The correct way to expose additional data for service contracts (such as REST or GraphQL APIs) is via Extension Attributes.

A (plugins): Not intended for exposing new data in APIs.

C (events): Cannot modify service contract data structures.

B is correct: Extension Attributes allow adding new fields to API entities while maintaining backward compatibility and upgradability.

Reference:

Adobe Commerce DevDocs - Extension attributes

NEW QUESTION # 45

A recent client-reported bug is fixed by the Adobe Commerce community. The Adobe engineering team has not yet released the patch or committed the bug fix to GitHub. A Developer acquires the custom patch and releases it to their Adobe Commerce environments.

What are the recommended steps the Developer should follow to implement the custom patch for the bug fix?

- **A. Install the cweagans/composer-patches module and edit the composer.json file to apply the custom patch.**
- B. Update the quality-patches module and list the required patch in the magento-ce-patch.yaml file.
- C. Install only official patches supplied by them to maintain upgradability.

Answer: A

NEW QUESTION # 46

A Developer working on an Adobe Commerce Cloud project encounters an issue with the database service that requires investigation. To troubleshoot the issue, the Developer decides to securely access the cloud services from the local machine to directly interact with the services and run diagnostic commands.

Which command step is required to achieve this?

- **A. Use the magento-cloud tunnelopen command to access the cloud services.**
- B. Use the php bin/magento cloud:tunnel:connect command to access the cloud services.
- C. Use the magento-cloud service:connect command to access the cloud services.

Answer: A

Explanation:

To securely access services (such as MySQL, Redis, Elasticsearch) running in Adobe Commerce Cloud, developers must use the tunnel feature. The correct command is:

Adobe Commerce Cloud CLI - Tunnel to services
