USGBC LEED-Green-Associate Detailed Study Plan | LEED-Green-Associate Certification Training

This is how not only you can make your success certain in the LEED Green Associate Exam exam in a single attempt but you can also score high marks by properly following USGBC LEED-Green-Associate Dumps provided. Now you don't need to collect outdated and irrelevant USGBC LEED-Green-Associate dumps from several sources and spend money on expensive books.

Because the ITexamReview follows every bit of the official LEED Green Associate Exam exam syllabus to compile the most relevant USGBC LEED-Green-Associate Pdf Dumps questions and answers with 100% chance of appearing in the actual exam. The USGBC LEED-Green-Associate PDF dumps file does not require any installation and is equally suitable for PCs, mobile devices, and tablets.

USGBC LEED-Green-Associate Exam Syllabus Topics:

| Topic | Details |
|---------|---|
| Topic 1 | <ul style="list-style-type: none"> Materials and Resources: This section of the exam measures the skills of sustainable materials specialists and focuses on reuse, life-cycle impacts, waste management, and environmentally preferable purchasing practices. It highlights the importance of material selection in reducing environmental impacts. |
| Topic 2 | <ul style="list-style-type: none"> Integrative Strategies: This section of the exam measures the skills of project managers and focuses on the integrative process in LEED projects. It includes understanding the roles of various team members and standards that support LEED, such as ASHRAE and ENERGY STAR guidelines. This section highlights the importance of collaboration and systems thinking in achieving sustainable design. |
| Topic 3 | <ul style="list-style-type: none"> Energy and Atmosphere: This section of the exam measures the skills of energy efficiency engineers and covers building loads, energy efficiency measures, and alternative energy practices. It emphasizes commissioning, energy auditing, and the use of renewable energy sources. |
| Topic 4 | <ul style="list-style-type: none"> LEED Process: This section of the exam measures the skills of sustainability consultants and covers the foundational aspects of LEED, including organization fundamentals, the structure of LEED rating systems, and the LEED certification process. It emphasizes understanding the goals and objectives of each credit category and how they contribute to sustainable building practices. |

USGBC LEED Green Associate Exam Sample Questions (Q86-Q91):

NEW QUESTION # 86

Which of the following has the highest energy consumption in a typical U.S. office building?

- A. Space Heating
- B. Cooling
- C. Lighting
- D. Water Heating

Answer: A

Explanation:

According to the U.S. Energy Information Administration, space heating accounted for about 32% of energy use for all U.S. commercial buildings in 2018, followed by ventilation and lighting, each at about 10%. Space heating is the largest single energy end use in U.S. office buildings as well.

Use of energy in commercial buildings - U.S. Energy Information Administration (EIA)1 DataTrends: Energy Use in Office Buildings | ENERGY STAR2

NEW QUESTION # 87

To reduce the use of potable water for irrigation, which of the following factors should be taken into consideration?

- A. Minimize pervious areas
- B. Minimize green roof area
- C. Maximize use of native species
- D. Maximize use of pervious pavement

Answer: C

Explanation:

Native species are plants that are adapted to the local climate and soil conditions, and therefore require less water and maintenance than non-native species. By maximizing the use of native species in the landscaping design, the project can reduce the need for potable water for irrigation and achieve the Outdoor Water Use Reduction credit under LEED v4 Water Efficiency category1.

NEW QUESTION # 88

To reduce the use of potable water for irrigation, which of the following factors should be taken into consideration?

- A. Minimize pervious areas
- B. Minimize green roof area
- C. Maximize use of native species
- D. Maximize use of pervious pavement

Answer: C

Explanation:

Native species are plants that are adapted to the local climate and soil conditions, and therefore require less water and maintenance than non-native species. By maximizing the use of native species in the landscaping design, the project can reduce the need for potable water for irrigation and achieve the Outdoor Water Use Reduction credit under LEED v4 Water Efficiency category1.

NEW QUESTION # 89

What organization reviews and provides final LEED certification report to projects?

- A. Green Building Initiative (GBI)
- B. ASHRAE
- C. U.S. Green Building Council
- D. Green Business Certification Inc.

Answer: D

Explanation:

Explanation

The Green Business Certification Inc. (GBCI) reviews and provides the final LEED certification report to projects. GBCI was established in 2008 as a separately incorporated entity with the support of the U.S. Green Building Council (USGBC). GBCI administers project certifications for LEED and other green business certification programs. References: LEED Green Associate Candidate Handbook, U.S. Green Building Council resources

NEW QUESTION # 90

The LEED Project team performs an initial review that indicates 34 credit points can be achieved from the credit categories. How many additional points would result in the project achieving LEED Silver?

- A. 20 additional points
- B. 15 additional points
- C. 30 additional points
- D. 10 additional points

Answer: A

Explanation:

LEED certification is awarded based on the number of points a project earns across several categories of green building performance. The range of points required to achieve LEED Silver is 50-59, out of a possible 110 points. The other levels of LEED certification are: Certified (40-49 points), Gold (60-79 points), and Platinum (80 or more points)12. Therefore, if a project initially has 34 credit points, it would need 20 additional points to reach the minimum threshold for LEED Silver.
