Valid 156-536 Learning Materials - Study 156-536 Dumps

What's more, part of that Fast2test 156-536 dumps now are free: https://drive.google.com/open?id=1V_xabM6_ag47kcfNSuKZ23tFcXA8dQUZ

Being anxious for the exam ahead of you? Have a look of our 156-536 practice materials please. Presiding over the line of 156-536 practice materials over ten years, our experts are proficient as elites who made our 156-536 practice materials, and it is their job to officiate the routines of offering help for you. All points are predominantly related with the exam ahead of you. Every page is full of well-turned words for your reference related wholly with the real exam.

As we all know, it is not easy to get promotion. For the fist thing, you must be good at finishing your work excellently. At the same time, you must accumulate much experience and knowledge. If you urgently want to stand out in your company, our 156-536 exam guide can help you realize your aims in the shortest time. For not only that our 156-536 Study Materials can help you know more knowledge on the subject and our 156-536 practice engine can help you get your according certification.

Study 156-536 Dumps | Pass Leader 156-536 Dumps

Our 156-536 practicing materials is aimed at promote the understanding for the exam. We have free domo for you to comprehend the format of 156-536 exam dumps. After you pay for the 156-536 exam dumps, we will send you the downloading linking and password within ten minutes, and if you have any other questions, please don't hesitate to contact us, we are very glad to help you solve the problems.

CheckPoint Check Point Certified Harmony Endpoint Specialist - R81.20

(CCES) Sample Questions (Q53-Q58):

NEW QUESTION # 53
What connection options does Connection Awareness support?

- A. Client and Server model based on LDAP model. The supported ports are 389 and 636
- B. There are two options: Connected and Disconnected
- C. Master and Slave Endpoint Security Management Server
- D. There are two options: Connected to Management and Connected to a List of Specified Targets

Answer: D

NEW QUESTION # 54
Full Disk Encryption (FDE) protects data at rest stored on a Hard Drive.

- A. NFS Share
- B. RAM Drive
- C. SMB Share
- D. Hard Drive

Answer: D

NEW QUESTION # 55
What connection options does Connection Awareness support?

- A. Client and Server model based on LDAP model. The supported ports are 389 and 636
- B. There are two options: Connected and Disconnected
- C. Master and Slave Endpoint Security Management Server
- D. There are two options: Connected to Management and Connected to a List of Specified Targets

Answer: D

Explanation:
Connection Awareness in Harmony Endpoint supports two specific connection options:Connected to ManagementandConnected to a List of Specified Targets. This is detailed in theCP_R81.
20_Harmony_Endpoint_Server_AdminGuide.pdfon page 27 under the "Client to Server Communication" section. The document explains that "The client is always the initiator of the connections," and it communicates with either the Endpoint Security Management Server or a list of defined Endpoint Policy Servers for operations such as policy downloads, heartbeats, and updates. It states, "Most communication is over HTTPS (TCP/443)" and highlights that clients can connect to the Management Server or specified Policy Servers, aligning with option D's description.
Option A ("Connected and Disconnected") is overly simplistic and does not reflect the specific connection targets outlined in the guide. Option B ("Master and Slave Endpoint Security Management Server") is incorrect; the documentation uses "Primary and Secondary Management Servers" for High Availability (page
24), not "Master and Slave." Option C ("Client and Server model based on LDAP model") misrepresents Connection Awareness, as LDAP ports (389 and 636) relate to Active Directory communication (page 124), not Connection Awareness. Option D accurately captures the two supported connection options as per the documentation, making it the correct answer.
References:
CP_R81.20_Harmony_Endpoint_Server_AdminGuide.pdf, Page 27: Client to Server Communication (describes client connections to Management or Policy Servers).

CP_R81.20_Harmony_Endpoint_Server_AdminGuide.pdf, Page 124: Active Directory Scanner (mentions LDAP ports, unrelated to Connection Awareness).

NEW QUESTION # 56
How many Endpoint Security Client Package types exist?

- A. There is only the initial package.
- B. There are two main package types. Initial Client Package and Endpoint Security Client Packages.
- C. The administrator has to download all the appropriate packages from the UserCenter.
- D. There are two packages. One for Windows and one for MacOS

Answer: B

NEW QUESTION # 57

If there are multiple EPS in an environment, what happens?

- A. Each Endpoint client automatically communicates with the EMS
- B. Each Endpoint client automatically communicates with the SMS
- C. Each Endpoint client does an analysis to find which EPS is "closest" and automatically communicates with that server.
- D. One Endpoint client automatically communicates with the server

Answer: C

Explanation:
In a Harmony Endpoint environment with multiple External Endpoint Policy Servers (EPS), the system is designed to optimize client-server communication by allowing Endpoint clients to select the most suitable EPS. This selection is based on a proximity analysis, typically determined by network latency, to ensure efficient performance and reduced latency.
The CP_R81.20_Harmony_Endpoint_Server_AdminGuide.pdf explicitly addresses this behavior on page 195, under "Endpoint Policy Server Proximity Analysis":
"Each Endpoint client does an analysis to find which EPS is 'closest' and automatically communicates with that server. This analysis is based on network latency and other factors to ensure optimal performance." This extract confirms that:
* Each Endpoint client performs an analysis: The client itself evaluates available EPS instances.
* Determines the "closest" EPS: "Closest" refers to network proximity, often measured by latency, though other factors may contribute.
* Automatically communicates with that server: Once identified, the client establishes communication with the selected EPS without manual intervention.
Option C precisely reflects this process, making it the correct answer. Let's review the other options:
* Option A ("One Endpoint client automatically communicates with the server"): This is vague and incorrect. It suggests only one client communicates, and "the server" is unspecified (EMS, EPS, or SMS?), failing to address the multi-EPS scenario.
* Option B ("Each Endpoint client automatically communicates with the EMS"): This contradicts the purpose of EPS, which is to offload communication from the EMS. Clients prioritize EPS when available, as per page 25.
* Option D ("Each Endpoint client automatically communicates with the SMS"): "SMS" likely refers to the Security Management Server, but Harmony Endpoint primarily uses the EMS (Endpoint Security Management Server). The documentation does not indicate clients defaulting to an SMS, making this incorrect.
Therefore, Option C is fully supported by the documentation, describing the intelligent, proximity-based behavior of clients in a multi-EPS environment.
