WGU Web-Development-Applications Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Creating Adaptive Web Documents and Pages: This section of the exam measures skills of Front-End Designers and covers the techniques needed to make websites display correctly across traditional desktops and mobile devices. It emphasizes adaptive page layout, flexible formatting, and user-friendly presentation so that content remains readable and functional on screens of different sizes. Candidates are expected to show an understanding of how to create consistent designs that respond smoothly to device changes.
Topic 2	<ul style="list-style-type: none"> • Validation, Testing, and Form Development: This section of the exam measures skills of Web Developers and covers the ability to validate code, test web pages for accuracy, and build form components. It includes understanding how to detect errors, ensure compliance with standards, and implement form fields with inline validation to improve user experience. The focus is on creating forms that work reliably, meet usability expectations, and maintain proper data entry flow.
Topic 3	<ul style="list-style-type: none"> • Responsive Web Design (RWD) for Browsers and Apps: This section of the exam measures skills of Front-End Designers and covers concepts related to mobile-first layout planning, responsive frameworks, and techniques used to ensure compatibility with modern browsers and applications. Candidates must demonstrate how to adjust elements for better usability on mobile devices and apply responsive strategies that allow a single design to function seamlessly across various environments.
Topic 4	<ul style="list-style-type: none"> • HTML5, CSS3, and JavaScript Foundations: This section of the exam measures skills of Web Developers and covers the essential ability to manually code using HTML5, CSS3, and JavaScript to create structured, visually styled, and interactive web content. It focuses on building accurate page layouts, applying modern styling rules, and writing basic scripts that support user interaction. The aim is to ensure candidates can construct professional web documents using current standards and properly integrate all three technologies.

All the WGU Web Development Applications (Web-Development-Applications) questions given in the product are based on actual examination topics.

WGU Web Development Applications Sample Questions (Q69-Q74):

NEW QUESTION # 69

Given the following HTML code:

And given the following CSS selector:

Which elements will the CSS be applied to?

- A. All anchors (a element) and elements preceded by an unordered list (ul element)
- B. Any anchors (a. element) preceded by unordered lists (ul element)
- C. All anchors (a. element) and elements inside unordered lists (ul element)
- D. Any anchors (a element) followed by unordered lists (ul element)

Answer: C

Explanation:

Given the CSS selector a, ul, it targets all anchor (<a>) elements and all unordered list () elements independently. This means the CSS rule will be applied to each <a> and element in the HTML document.

* CSS Selector Analysis:

* a: This part of the selector targets all <a> elements in the document.

* ,: The comma is a selector separator, meaning that each part of the selector list is applied independently.

* ul: This part of the selector targets all elements in the document.

* Example:

* Given HTML:

```
<p>
<a href="http://example.com/link0">Link 0</a>
<a href="http://example.com/link1">Link 1</a>
</p>
<ul>
<li>Hello</li>
</ul>
<p>
<a href="http://example.com/link2">Link 2</a>
<a href="https://example.com/link3">Link 3</a>
</p>
<b>Sample</b>
```

* Given CSS:

```
a, ul {
color: red;
}
```

* Affected Elements: All <a> and elements will have the color set to red.

NEW QUESTION # 70

Which HTML segment should a developer use to enable the Offline AppCache application interface (API)?

- A.
- B.
- C.
- D.

Answer: B

Explanation:

The correct HTML segment to enable the Offline AppCache application interface (API) is by specifying the manifest attribute in the <html> tag.

* AppCache Manifest: The manifest attribute in the <html> tag is used to specify the URL of the AppCach

NEW QUESTION # 71

Given the following HTML code:

Which line of code should replace the first line to ensure that users can pause and restart the video?

- A.
- B.
- C.
- D.

Answer: C

Explanation:

To ensure that users can pause and restart the video, the controls attribute needs to be added to the <video> tag. This attribute provides the user with controls to play, pause, and adjust the volume of the video. The correct line of code that should replace the first line in the provided HTML to achieve this functionality is:

```
<video width="360" height="270" controls>
```

Here's the comprehensive explanation:

* controls Attribute: The controls attribute is a boolean attribute. When present, it specifies that video controls should be displayed, allowing the user to control video playback, including pausing, playing, and seeking.

* HTML Structure:

* Original Line:

```
<video width="360" height="270">
```

* Revised Line:

```
<video width="360" height="270" controls>
```

* Usage Example:

```
<video width="360" height="270" controls>
```

```
<source src="video.mp4" type="video/mp4">
```

Your browser does not support the HTML5 video element.

```
</video>
```

In this example, adding the controls attribute provides the user with play, pause, and volume controls.

NEW QUESTION # 72

A web page has a section that contains an <article> element. The element is always 10 pixels to the right of its position.

Which type of layout positioning should the <article> element use?

- A. Relative
- B. Static
- C. Absolute
- D. Fixed

Answer: A

Explanation:

Relative positioning in CSS positions an element relative to its normal position. Using position: relative; allows you to adjust the

element's position with the top, right, bottom, or left properties.

* CSS Relative Positioning:

* Syntax:

```
article {  
position: relative;  
left: 10px;  
}
```

* Description: Moves the element 10 pixels to the right from its normal position.

* Example:

* Given HTML:

```
<article>Content</article>
```

* Given CSS:

```
article {  
position: relative;  
left: 10px;  
}
```

* Explanation: The <article> element will be positioned 10 pixels to the right of where it would normally appear.

NEW QUESTION # 73

Which HTML element should a developer use to logically group a set of related HTML elements?

- A. Datalist
- **B. Fieldset**
- C. input
- D. Select

Answer: B

Explanation:

The <fieldset> element is used to group a set of related HTML elements in a form. It provides a way to logically group related controls and labels.

* Fieldset Element: The <fieldset> element can be used to create a group of form controls, along with an optional <legend> element that provides a caption for the group.

* Usage Example:

```
<fieldset>  
<legend>Personal Information</legend>  
<label for="name">Name:</label>  
<input type="text" id="name" name="name">  
<label for="email">Email:</label>  
<input type="email" id="email" name="email">  
</fieldset>
```

This groups the name and email input fields under the legend "Personal Information".
