A network engineer is configuring customer edge routers to finalize a L2VPN over MPLS deployment Assume that the AToM L2VPN service that connects the two CEs is configured correctly on the service provider network Which action causes the solution to fail?

- A. A loopback with a /32 IP address has not been used
- B. The routing protocol network types are not compatible
- C. OSPF does not work with L2VPN services
- D. The xconnect statement has not been defined

Answer: D

Explanation:
In the context of configuring L2VPN over MPLS, the xconnect statement is essential. It specifies the peer router and virtual circuit ID, creating the connection between two customer edge routers over the service provider's MPLS network. Without the xconnect statement, there's no association between the attachment circuits and pseudowire, leading to the failure of the L2VPN service.
