AZ-305 Test Engine, AZ-305 Reliable Exam Questions

IT certification exam materials providers are increasing recently years so that you will feel confused while choosing Microsoft AZ-305 latest exam questions vce. Here is good news that PracticeVCE dumps are updated and it is valid and latest. If you purchase dumps right now you can get the best discount and price. AZ-305 Latest Exam Questions vce will be your best choice for your test. Wish you pass exam successfully with our products.

Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q285-Q290):

NEW QUESTION # 285

You need to deploy an instance of SQL Server on Azure Virtual Machines. The solution must meet the following requirements:

- * Support 15,000 disk IOPS.
- * Support SR-IOV.
- * Minimize costs.

What should you include in the solution? To answer, select the appropriate options in the answer area. NOTE:

Each correct selection is worth one point.

Answer:

Explanation:
Answer Area

Explanation:
Answer Area

NEW QUESTION # 286

You have an on-premises Microsoft SQL Server database named SQL1.

You plan to migrate SQL 1 to Azure.

You need to recommend a hosting solution for SQL1. The solution must meet the following requirements:

- * Support the deployment of multiple secondary, read-only replicas.
- * Support automatic replication between primary and secondary replicas.
- * Support failover between primary and secondary replicas within a 15-minute recovery time objective (RTO).

Answer Area

Answer:

Explanation:

Explanation

NEW QUESTION # 287

You plan to deploy an Azure BareMetal Infrastructure instance that will host the data tier of a business-critical workload. The application tier of the workload will be hosted on Azure virtual machines. You need to configure the virtual machines to minimize network latency between the application tier and the data tier. What should you use?

- A. ExpressRoute FastPath
- B. a proximity placement group
- C. an availability zone
- D. an availability set

Answer: B

Explanation:

Proximity placement groups enable the grouping of different VM types under a single network spine, ensuring optimal low network latency between them. When the first VM is deployed in proximity placement group, that VM gets bound to a specific network spine. As all the other VMs that are going to be deployed into the same proximity placement group, those VMs get grouped under the same network spine.

NEW QUESTION # 288

You have an on-premises datacenter named Site1. Site1 contains a VMware vSphere cluster named Cluster1 that hosts 100 virtual machines. Cluster1 is managed by using VMware vCenter.

You have an Azure subscription named Sub1.

You plan to migrate the virtual machines from Cluster1 to Sub1.

You need to identify which resources are required to run the virtual machines in Azure. The solution must minimize administrative effort.

What should you configure? To answer, drag the appropriate resources to the correct targets. Each resource may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Answer Area

Sub1: An Azure Migrate appliance

Cluster1: An Azure Migrate project

Explanation:

NEW QUESTION # 289

You plan to archive 10 TB of on-premises data files to Azure.

You need to recommend a data archival solution. The solution must minimize the cost of storing the data files.

Which Azure Storage account type should you include in the recommendation?

- A. Standard Storage (general purpose v1)
- **B. Standard StorageV2 (general purpose v2)**
- C. Premium StorageV2 (general purpose v2)
- D. Premium Storage (general purpose v1)

Answer: B

Explanation:

Explanation

Standard StorageV2 supports the Archive access tier, which would be the cheapest solution.
