

# 1Z0-1127-25–100% Free Test Practice | 1Z0-1127-25 Valid Exam Pattern

$e + a = 31$  แล้วค่าของ  $b + c + d$  ตรงกับข้อใด

ก. 45

ข. 48

ค. 51

ง. 54

$$\begin{aligned}
 &(a+b) + (b+c) + (c+d) + (d+e) + \\
 &(e+a) = 29 + 30 + 28 + 34 + 31 \\
 &2a + 2b + 2c + 2d + 2e = 152 \\
 &2(b+c+d) + 2(a+e) = 152 \\
 &2(b+c+d) + 2(31) = 152 \\
 &2(b+c+d) = 152 - 62 = 90 \\
 &\therefore b+c+d = \frac{90}{2} = 45
 \end{aligned}$$

P.S. Free & New 1Z0-1127-25 dumps are available on Google Drive shared by Test4Cram: [https://drive.google.com/open?id=1Z0EX2TvDgKvkA890eDWFQ3TjrMV1Ovz\\_](https://drive.google.com/open?id=1Z0EX2TvDgKvkA890eDWFQ3TjrMV1Ovz_)

We have been developing our 1Z0-1127-25 practice engine for many years. We have no doubt about our quality. Our experience is definitely what you need. To combine many factors, our 1Z0-1127-25 real exam must be your best choice. And our 1Z0-1127-25 Exam Questions have been tested by many of our loyal customers, as you can find that the 98% of them all passed their 1Z0-1127-25 exam and a lot of them left their warm feedbacks on the website.

## Oracle 1Z0-1127-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Using OCI Generative AI Service: This section evaluates the expertise of Cloud AI Specialists and Solution Architects in utilizing Oracle Cloud Infrastructure (OCI) Generative AI services. It includes understanding pre-trained foundational models for chat and embedding, creating dedicated AI clusters for fine-tuning and inference, and deploying model endpoints for real-time inference. The section also explores OCI's security architecture for generative AI and emphasizes responsible AI practices.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Implement RAG Using OCI Generative AI Service: This section tests the knowledge of Knowledge Engineers and Database Specialists in implementing Retrieval-Augmented Generation (RAG) workflows using OCI Generative AI services. It covers integrating LangChain with Oracle Database 23ai, document processing techniques like chunking and embedding, storing indexed chunks in Oracle Database 23ai, performing similarity searches, and generating responses using OCI Generative AI.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Using OCI Generative AI RAG Agents Service: This domain measures the skills of Conversational AI Developers and AI Application Architects in creating and managing RAG agents using OCI Generative AI services. It includes building knowledge bases, deploying agents as chatbots, and invoking deployed RAG agents for interactive use cases. The focus is on leveraging generative AI to create intelligent conversational systems.</li> </ul>

Topic 4	<ul style="list-style-type: none"><li>• <b>Fundamentals of Large Language Models (LLMs):</b> This section of the exam measures the skills of AI Engineers and Data Scientists in understanding the core principles of large language models. It covers LLM architectures, including transformer-based models, and explains how to design and use prompts effectively. The section also focuses on fine-tuning LLMs for specific tasks and introduces concepts related to code models, multi-modal capabilities, and language agents.</li></ul>

## Oracle 1Z0-1127-25 Valid Exam Pattern & 1Z0-1127-25 Valuable Feedback

For candidates who have little time to prepare for the exam, buying high-quality 1Z0-1127-25 exam materials is quite necessary. With the experienced professionals to edit, 1Z0-1127-25 exam materials of us are high-quality, and they will help you pass the exam and get the certificate just one time. You just need to spend about 48 to 72 hours on practicing, and you can pass the exam. We also pass guarantee and money back guarantee if you fail to pass the exam. We provide you with free update for 365 days if you purchase 1Z0-1127-25 Exam Materials from us.

## Oracle Cloud Infrastructure 2025 Generative AI Professional Sample Questions (Q59-Q64):

### NEW QUESTION # 59

What is the function of "Prompts" in the chatbot system?

- A. They are responsible for the underlying mechanics of the chatbot.
- **B. They are used to initiate and guide the chatbot's responses.**
- C. They store the chatbot's linguistic knowledge.
- D. They handle the chatbot's memory and recall abilities.

**Answer: B**

Explanation:

Comprehensive and Detailed In-Depth Explanation=

Prompts in a chatbot system are inputs provided to the LLM to initiate and steer its responses, often including instructions, context, or examples. They shape the chatbot's behavior without altering its core mechanics, making Option B correct. Option A is false, as knowledge is stored in the model's parameters. Option C relates to the model's architecture, not prompts. Option D pertains to memory systems, not prompts directly. Prompts are key for effective interaction.

OCI 2025 Generative AI documentation likely covers prompts under chatbot design or inference sections.

### NEW QUESTION # 60

What differentiates Semantic search from traditional keyword search?

- **A. It involves understanding the intent and context of the search.**
- B. It depends on the number of times keywords appear in the content.
- C. It relies solely on matching exact keywords in the content.
- D. It is based on the date and author of the content.

**Answer: A**

Explanation:

Comprehensive and Detailed In-Depth Explanation=

Semantic search uses embeddings and NLP to understand the meaning, intent, and context behind a query, rather than just matching exact keywords (as in traditional search). This enables more relevant results, even if exact terms aren't present, making Option C correct. Options A and B describe traditional keyword search mechanics. Option D is unrelated, as metadata like date or author isn't the primary focus of semantic search. Semantic search leverages vector representations for deeper understanding.

OCI 2025 Generative AI documentation likely contrasts semantic and keyword search under search or retrieval sections.

### NEW QUESTION # 61

What is the purpose of Retrievers in LangChain?

- A. To train Large Language Models
- B. To combine multiple components into a single pipeline
- C. To retrieve relevant information from knowledge bases
- D. To break down complex tasks into smaller steps

**Answer: C**

Explanation:

Comprehensive and Detailed In-Depth Explanation=

Retrievers in LangChain fetch relevant information (e.g., documents, embeddings) from external knowledge bases (like vector stores) to provide context for LLM responses, especially in RAG setups. This makes Option B correct. Option A (training) is unrelated-Retrievers operate at inference. Option C (task breakdown) pertains to prompting techniques, not retrieval. Option D (pipeline combination) describes chains, not Retrievers specifically. Retrievers enhance context awareness.

OCI 2025 Generative AI documentation likely defines Retrievers under LangChain components.

### NEW QUESTION # 62

How does the structure of vector databases differ from traditional relational databases?

- A. It uses simple row-based data storage.
- B. A vector database stores data in a linear or tabular format.
- C. It is not optimized for high-dimensional spaces.
- D. It is based on distances and similarities in a vector space.

**Answer: D**

Explanation:

Comprehensive and Detailed In-Depth Explanation=

Vector databases store data as high-dimensional vectors, optimized for similarity searches (e.g., cosine distance), unlike relational databases' tabular, row-column structure. This makes Option C correct. Option A and D describe relational databases. Option B is false-vector databases excel in high-dimensional spaces. Vector databases support semantic queries critical for LLMs.

OCI 2025 Generative AI documentation likely contrasts these under data storage options.

### NEW QUESTION # 63

How do Dot Product and Cosine Distance differ in their application to comparing text embeddings in natural language processing?

- A. Dot Product measures the magnitude and direction of vectors, whereas Cosine Distance focuses on the orientation regardless of magnitude.
- B. Dot Product is used for semantic analysis, whereas Cosine Distance is used for syntactic comparisons.
- C. Dot Product assesses the overall similarity in content, whereas Cosine Distance measures topical relevance.
- D. Dot Product calculates the literal overlap of words, whereas Cosine Distance evaluates the stylistic similarity.

**Answer: A**

Explanation:

Comprehensive and Detailed In-Depth Explanation=

Dot Product computes the raw similarity between two vectors, factoring in both magnitude and direction, while Cosine Distance (or similarity) normalizes for magnitude, focusing solely on directional alignment (angle), making Option C correct. Option A is vague-both measure similarity, not distinct content vs. topicality. Option B is false-both address semantics, not syntax. Option D is incorrect-neither measures word overlap or style directly; they operate on embeddings. Cosine is preferred for normalized semantic comparison.

OCI 2025 Generative AI documentation likely explains these metrics under vector similarity in embeddings.

### NEW QUESTION # 64

.....

Are you looking for the best way to get Oracle 1Z0-1127-25 certified and advance your career? The 1Z0-1127-25 Dumps PDF of the Test4Cram is the perfect choice for you. Cracking the 1Z0-1127-25 test for the Oracle 1Z0-1127-25 Certification can be a daunting process, but with the help of our 1Z0-1127-25 preparation material, you'll be able to achieve the Oracle 1Z0-1127-25 certification you're looking for.
