CTFL-AcT Reliable Exam Review - CTFL-AcT Upgrade Dumps

As we all know, looking at things on a computer for a long time can make your eyes wear out and even lead to the decline of vision. We are always thinking about the purpose for our customers. To help customers solve problems, we support printing of our CTFL-AcT exam torrent. Our CTFL-AcT quiz torrent can help you get out of trouble regain confidence and embrace a better life. Our CTFL-AcT Exam Question can help you learn effectively and ultimately obtain the authority certification of ISQI, which will fully prove your ability and let you stand out in the labor market. We have the confidence and ability to make you finally have rich rewards. Our CTFL-AcT learning materials provide you with a platform of knowledge to help you achieve your wishes.

ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q25-

Q30):

NEW QUESTION # 25

Which one of the following statements regarding ATDD / BDD is true?

- A. Behavior-Driven Development (BDD) considers acceptance test design as an activity to be handled by the test team after requirements have been finalized.
- **B. In both Acceptance-Test Driven Development (ATDD) and Behavior-Driven Development (BDD), test cases provide examples of product use.**
- C. In both Acceptance-Test Driven Development (ATDD) and Behavior-Driven Development (BDD), acceptance test cases are written by a test automation engineer as test automation code.
- D. In Acceptance-Test Driven Development (ATDD), test cases are written prior to the acceptance criteria.

Answer: B

NEW QUESTION # 26

Which of the following relations between business rule modeling and ATDD is correct?

- A. By writing business rules models, stakeholders commit to the ATDD approach
- B. Business rules are described using the Gherkin language also used in ATDD
- **C. Application workflow models facilitate the generation of ATDD acceptance test cases**
- D. In ATDD business rule models are defined prior to business process models

Answer: C

Explanation:

In Acceptance Test-Driven Development (ATDD), test cases are derived early and are based on business understanding. Application workflows modeled using BPMN or similar notations provide a clear, visual representation of how a user interacts with a system and which business rules are applied.

Option D is correct because these workflow models help define acceptance test cases by outlining the process paths, user interactions, and decision points. These visual models bridge the gap between business needs and testing.

Other options:

A is incorrect - business rule and process models are created based on need; one doesn't necessarily precede the other.

B is misleading - writing business rule models doesn't imply stakeholder commitment to ATDD.

C is incorrect - Gherkin is used for writing scenarios in BDD/ATDD, but business rules are typically modeled using DMN, not Gherkin.

D). Application workflow models facilitate the generation of ATDD acceptance test cases

NEW QUESTION # 27

Which of the following statements regarding defects is MOST correct?

- A. The tester should analyze the potential impact of a defect on system usage, before communicating it to the business analyst.
- **B. Testers should provide accurate information regarding the difference between the expected test result and the actual result.**
- C. If the defect turns out to be a bug, the tester writes a defect report and sends it to the business analyst for further investigation.
- D. Regular meetings between business analysts and testers are necessary to report discrepancies between actual and expected outcome.

Answer: B

NEW QUESTION # 28

Which one of the following statements describes the collaboration between business analysts and testers BEST?

- A. Business analysts usually cannot review acceptance tests, because they do not understand the technical details.
- B. Testers participate in identifying business needs of stakeholders to better understand the business needs and related requirements.
- **C. Business analysts collaborate on test planning and risk analysis to ensure that further on, appropriate test cases are**

developed and prioritized.

- D. Once the requirements and acceptance criteria have been defined, business analysts are no longer involved in testing activities.

Answer: C

Explanation:

The ISTQB CTFL Acceptance Testing Syllabus emphasizes the importance of collaboration between business analysts and testers throughout the testing lifecycle, especially during test planning and risk identification.

Business analysts contribute domain knowledge and business context, which is crucial in identifying business- critical areas, defining priorities, and ensuring that acceptance tests align with business goals.

Option A correctly identifies this collaboration. During test planning, business analysts help define acceptance criteria, identify risks from a business perspective, and support test prioritization to focus on high-value features. Their early involvement ensures that acceptance tests are meaningful and support stakeholder expectations.

Option B is incorrect as business analysts actively review acceptance tests to confirm alignment with business rules, regardless of technical complexity.

Option C is inaccurate because although testers seek to understand business needs, the responsibility for identifying those needs lies with business analysts.

Option D is incorrect; business analysts remain engaged throughout the project lifecycle, including test support and defect triage.

Exact Reference - ISTQB CTFL Acceptance Testing Syllabus (Section 1.4):

"Testers and business analysts collaborate during test planning and analysis activities to ensure the tests meet business needs and risk areas are adequately covered." Therefore, A provides the most accurate and comprehensive description.

NEW QUESTION # 29

Which tool is BEST for describing business processes and rules?

- A. Project management tool
- B. Defect tracking tool
- C. Test management tool
- **D. Process modelling tool**

Answer: D

Explanation:

To describe business processes and business rules in a structured, visual, and analyzable way, a process modeling tool is the most appropriate. These tools often support standards like BPMN (Business Process Model and Notation) for process workflows and DMN (Decision Model and Notation) for business rules.

Option D is correct because process modeling tools enable business analysts and stakeholders to capture, analyze, and communicate business operations and decision logic, which are foundational for acceptance test case generation in ATDD.

Other options:

A (Project management tools) manage schedules, resources, and scope, not business rules.

B (Test management tools) handle test cases and execution, not business modeling.

C (Defect tracking tools) track bugs but are not used for describing processes or rules.

D). Process modelling tool

NEW QUESTION # 30

.....

One of the reason for this popularity is our study material are accompanied by high quality and efficient services so that they can solve all your problems. We guarantee that after purchasing our CTFL-AcT test prep, we will deliver the product to you as soon as possible about 5-10 minutes. So you don't need to wait for a long time or worry about the delivery time has any delay. We will transfer our CTFL-AcT Test Prep to you online immediately, and this service is also the reason why our CTFL-AcT study torrent can win people's heart and mind.
