Computers have made their appearance providing great speed and accuracy for our work. IT senior engine is very much in demand in all over the world. Now Salesforce Data-Architect latest dumps files will be helpful for your career. TrainingDump produces the best products with high quality and high passing rate. Our valid Data-Architect Latest Dumps Files help a lot of candidates pass exam and obtain certifications, so that we are famous and authoritative in this filed.

Salesforce Data-Architect Exam is a comprehensive assessment of a professional's knowledge and skills in the field of data architecture. Passing Data-Architect exam is a significant achievement and provides a certification that is highly valued in the industry. Data-Architect exam tests a candidate's ability to design and implement complex data solutions using Salesforce technologies and is intended for professionals who have significant experience in data architecture.

The Data-Architect Certification Exam is a challenging exam that requires a significant amount of preparation and study. Candidates must have an in-depth understanding of Salesforce data architecture, data modeling, and data governance. They must also have practical experience working with data integrations and data migration.

Data-Architect Latest Study Guide, Exam Data-Architect Cram Questions

By contrasting with other products in the industry, our Data-Architect test guide really has a higher pass rate, which has been verified by many users. As long as you use our Data-Architect exam training I believe you can pass the exam. If you fail to pass the exam, we will give a full refund. Data-Architect learning guide hopes to progress together with you and work together for their own future. The high passing rate of Salesforce Certified Data Architect exam training guide also requires your efforts. If you choose Data-Architect test guide, I believe we can together contribute to this high pass rate.

Salesforce Data-Architect Certification Exam covers a wide range of topics, including data modeling, data integration, data migration, data governance, and data security. Data-Architect exam consists of multiple-choice questions that test the candidate's ability to design and implement data solutions that meet business requirements. Data-Architect Exam is available in English, Japanese, and Spanish and can be taken at any Salesforce testing center or online.

Salesforce Certified Data Architect Sample Questions (Q80-Q85):

NEW QUESTION # 80

Cloud Kicks has the following requirements:

- * Their Shipment custom object must always relate to a Product, a Sender, and a Receiver (all separate custom objects).
- * If a Shipment is currently associated with a Product, Sender, or Receiver, deletion of those records should not be allowed.
- * Each custom object must have separate sharing models.

What should an Architect do to fulfill these requirements?

- A. Associate the Shipment to each parent record by using a VLOOKUP formula field.
- B. Create two Master-Detail and one Lookup relationship to the parent records.
- C. Create a Master-Detail relationship to each of the three parent records.
- **D. Create a required Lookup relationship to each of the three parent records.**

Answer: D

Explanation:

A required Lookup relationship ensures that the Shipment record must have a value for each of the three parent records, and also prevents the deletion of those parent records if they are referenced by a Shipment record. A Master-Detail relationship would not allow separate sharing models for each custom object, and a VLOOKUP formula field would not enforce the relationship or prevent deletion.

NEW QUESTION # 81

A casino is implementing Salesforce and is planning to build a customer 360 degree view for a customer who visits its resorts. The casino currently maintains the following systems that record customer activity: 1. Point-of-sale system: All purchases for a customer
2. Salesforce; All customer service activity and sales activities for a customer
3. Mobile app: All bookings, preferences, and browser activity for a customer
4. Marketing: All email, SMS, and social campaigns for a customer

Customer service agents using Salesforce would like to view the activities from all four systems to provide support to customers. The information has to be current and real time.

What strategy should the data architect implement to satisfy this requirement?

- A. Use a customer data mart to create the 360-degree view of the customer.
- B. Periodically upload summary information in Salesforce to build a 360-degree view.
- C. Migrate customer activities from all four systems into Salesforce.
- **D. Explore external data sources in Salesforce to build a 360-degree view of the customer.**

Answer: D

Explanation:

Exploring external data sources in Salesforce to build a 360 degree view of the customer (option A) is the best strategy to satisfy this requirement, as it allows customer service agents to view the activities from all four systems in real time without storing or replicating the data in Salesforce. Using a customer data mart to create the 360 degree view of the customer (option B) is not a good strategy, as it may introduce additional complexity and cost, and it does not leverage the native Salesforce features. Periodically uploading summary information in Salesforce to build a 360 degree view (option C) is also not a good strategy, as it may cause data latency and inconsistency, and it does not provide real-time information. Migrating customer activities from all four systems into Salesforce (option D) is also not a good strategy, as it may cause data redundancy and conflicts, and it does not scale well with large volumes of data.

NEW QUESTION # 82

Universal Containers (UC) owns several Salesforce orgs across a variety of business units. UC management has declared that it needs the ability to report on Accounts and Opportunities from each org in one place. Once the data is brought together into a global view, management would like to use advanced AI-driven analytics on the dataset.

Which tool should a data architect recommend to accomplish this reporting requirement?

- A. Write a Python script to aggregate and visualize the data.
- **B. Use Einstein Analytics for multi-org.**
- C. Install a third-party AppExchange tool for multi-org reporting.
- D. Run standard reports and dashboards.

Answer: B

NEW QUESTION # 83

Universal Container is using Salesforce for Opportunity management and enterprise resource planning (ERP) for order management. Sales reps do not have access to the ERP and have no visibility into order status.

What solution a data architect recommends to give the sales team visibility into order status?

- A. Build batch jobs to push order line items to salesforce.
- **B. leverage Salesforce Connect to bring the order line item from the legacy system to Salesforce.**
- C. Build real-time integration to pull order line items into Salesforce when viewing orders.
- D. Leverage Canvas to bring the order management UI in to the Salesforce tab.

Answer: B

Explanation:

The correct answer is C, leverage Salesforce Connect to bring the order line item from the legacy system to Salesforce. Salesforce Connect is a feature that allows you to integrate external data sources with Salesforce and access them in real time without copying or synchronizing the data. This way, the sales team can view the order status from the ERP system without having access to it. Leveraging Canvas, building batch jobs, or building real-time integration are also possible solutions, but they are more complex and costly than using Salesforce Connect.

NEW QUESTION # 84

Universal Containers keeps its Account data in Salesforce and its Invoice data in a third -party ERP system. They have connected the Invoice data through a Salesforce external object. They want data from both Accounts and Invoices visible in one report in one place. What two approaches should an architect suggest for achieving this solution? Choose 2 answers

- **A. Create a Visualforce page combining Salesforce Account data and Invoice external object data.**
- B. Create a report combining data from the Account standard object and the Invoices external object.
- **C. Create a report in an external system combining Salesforce Account data and Invoice data from the ERP.**
- D. Create a separate Salesforce report for Accounts and Invoices and combine them in a dashboard.

Answer: A,C

Explanation:

Creating a report in an external system combining Salesforce Account data and Invoice data from the ERP, and creating a Visualforce page combining Salesforce Account data and Invoice external object data are two approaches that an architect can suggest for achieving this solution. Both of these approaches can display data from both Accounts and Invoices in one place, using either an external reporting tool or a custom web page. Creating a report combining data from the Account standard object and the Invoices external object is not possible because Salesforce does not support reporting on external objects. Creating a separate Salesforce report for Accounts and Invoices and combining them in a dashboard is not ideal because it will not show the data in one report, but rather in two separate components.
