

Unparalleled Data-Con-101 Boot Camp for Real Exam

P.S. Free 2026 Salesforce Data-Con-101 dumps are available on Google Drive shared by TestPDF:
<https://drive.google.com/open?id=15hYNUWDHhXLZipAqcnymomXUBpbkL4d>

If you are going to buy Data-Con-101 training materials online, the security of the website is important. We have technicians to examine the website every day, if you chose us, we provide you with a clean and safe online shopping environment. In addition, Data-Con-101 exam materials are compiled by professional experts, and therefore the quality can be guaranteed. We offer you free demo to have a try before buying, so that you can have a deeper understanding of what you are going to buy. Data-Con-101 Training Materials contain also have certain number of questions, and if will be enough for you to pass the exam. We have online and offline chat service stuff, if you have any questions, you can consult us.

Salesforce Data-Con-101 Exam Syllabus Topics:

Topic	Details
Topic 1	Identity Resolution: This domain explores creating unified customer profiles through matching and reconciliation processes. It covers how rule sets determine when records link together, how conflicting data is resolved, and understanding the outcomes and use cases of unified identities.
Topic 2	Data Cloud Overview: This domain covers the foundational understanding of Data Cloud including its core purpose, terminology, business value, and technical architecture. It also addresses typical use cases and the essential principles of ethical data handling when working with customer data.
Topic 3	Data Cloud Setup and Administration: This domain focuses on configuring and managing Data Cloud environments through permissions, data streams, data bundles, and data spaces. It also covers administrative tools and techniques for diagnosing and exploring data using reports, dashboards, flows, APIs, and explorer tools.

PDF Salesforce Data-Con-101 VCE - Real Data-Con-101 Testing Environment

We TestPDF are growing faster and faster owing to our high-quality latest Data-Con-101 certification guide materials with high pass rate. Based on our past data, our pass rate of Data-Con-101 training guide is high up to 99% to 100% recently years. Many customer will become regular customer and think of us once they have exams to clear after choosing our Data-Con-101 Exam Guide one time. So we have no need to spend much spirits to advertise but only put most into researching and after-sale service. As long as you study with our Data-Con-101 learning questions, you will find that it is a right choice.

Salesforce Certified Data Cloud Consultant Sample Questions (Q13-Q18):

NEW QUESTION # 13

Northern Trail Outfitters (NTO) wants to send a promotional campaign for customers that have purchased within the past 6 months. The consultant created a segment to meet this requirement.

Now, NTO brings an additional requirement to suppress customers who have made purchases within the last week.

What should the consultant use to remove the recent customers?

- A. Streaming insight
- **B. Segmentation exclude rules**
- C. Related attributes
- D. Batch transforms

Answer: B

Explanation:

The consultant should use B. Segmentation exclude rules to remove the recent customers. Segmentation exclude rules are filters that can be applied to a segment to exclude records that meet certain criteria. The consultant can use segmentation exclude rules to exclude customers who have made purchases within the last week from the segment that contains customers who have purchased within the past 6 months. This way, the segment will only include customers who are eligible for the promotional campaign.

The other options are not correct. Option A is incorrect because batch transforms are data processing tasks that can be applied to data streams or data lake objects to modify or enrich the data. Batch transforms are not used for segmentation or activation. Option

C is incorrect because related attributes are attributes that are derived from the relationships between data model objects. Related attributes are not used for excluding records from a segment. Option D is incorrect because streaming insights are derived attributes that are calculated at the time of data ingestion. Streaming insights are not used for excluding records from a segment. NEW QUESTION # 14

Which two dependencies prevent a data stream from being deleted?

Choose 2 answers

- A. The underlying data lake object is used in a data transform.
- B. The underlying data lake object is used in activation.
- C. The underlying data lake object is mapped to a data model object.
- D. The underlying data lake object is used in segmentation.

Answer: A,C

Explanation:

To delete a data stream in Data Cloud, the underlying data lake object (DLO) must not have any dependencies or references to other objects or processes. The following two dependencies prevent a data stream from being deleted¹:

Data transform: This is a process that transforms the ingested data into a standardized format and structure for the data model. A data transform can use one or more DLOs as input or output. If a DLO is used in a data transform, it cannot be deleted until the data transform is removed or modified².

Data model object: This is an object that represents a type of entity or relationship in the data model. A data model object can be mapped to one or more DLOs to define its attributes and values. If a DLO is mapped to a data model object, it cannot be deleted until the mapping is removed or changed³.

1: Delete a Data Stream article on Salesforce Help

2: [Data Transforms in Data Cloud] unit on Trailhead

3: [Data Model in Data Cloud] unit on Trailhead

NEW QUESTION # 15

What is Data Cloud's primary value to customers?

- A. To create personalized campaigns by listening, understanding, and acting on customer behavior
- B. To provide a unified view of a customer and their related data
- C. To create a single source of truth for all anonymous data
- D. To connect all systems with a golden record

Answer: B

Explanation:

Data Cloud is a platform that enables you to activate all your customer data across Salesforce applications and other systems. Data Cloud allows you to create a unified profile of each customer by ingesting, transforming, and linking data from various sources, such as CRM, marketing, commerce, service, and external data providers. Data Cloud also provides insights and analytics on customer behavior, preferences, and needs, as well as tools to segment, target, and personalize customer interactions. Data Cloud's primary value to customers is to provide a unified view of a customer and their related data, which can help you deliver better customer experiences, increase loyalty, and drive growth. NEW QUESTION # 16

Cloud Kicks wants to be able to build a segment of customers who have visited its website within the previous 7 days.

Which filter operator on the Engagement Date field fits this use case?

- A. Last Number of Days
- B. Greater than Last Number of
- C. Is Between
- D. Next Number of Days

Answer: A

Explanation:

The filter operator Last Number of Days allows you to filter on date fields using a relative date range that specifies the number of days before today. For example, you can use this operator to filter on customers who have visited your website in the last 7 days, or the last 30 days, or any number of days you want. This operator is useful for creating dynamic segments that update automatically based on the current date¹². References:

Relative Date Filter Reference

Create Filtered Segments

NEW QUESTION # 17

What does the Source Sequence reconciliation rule do in identity resolution?

- A. Identifies which individual records should be merged into a unified profile by setting a priority for specific data sources
- B. Identifies which data sources should be used in the process of reconciliation by prioritizing the most recently updated data source
- C. Sets the priority of specific data sources when building attributes in a unified profile, such as a first or last name
- D. Includes data from sources where the data is most frequently occurring

Answer: C

Explanation:

The Source Sequence reconciliation rule sets the priority of specific data sources when building attributes in a unified profile, such as a first or last name. This rule allows you to define which data source should be used as the primary source of truth for each attribute, and which data sources should be used as fallbacks in case the primary source is missing or invalid. For example, you can set the Source Sequence rule to use data from Salesforce CRM as the first priority, data from Marketing Cloud as the second priority, and data from Google Analytics as the third priority for the first name attribute. This way, the unified profile will use the first name value from Salesforce CRM if it exists, otherwise it will use the value from Marketing Cloud, and so on. This rule helps you to ensure the accuracy and consistency of the unified profile attributes across different data sources.
