# CAS-005 Free Download Pdf - CAS-005 Latest Exam Simulator

P.S. Free & New CAS-005 dumps are available on Google Drive shared by BraindumpsVCE: https://drive.google.com/open?id=16jfxeAvmKFp4U4YCNrk9XdDq-K24IHHf

Furthermore, after acquiring our CompTIA SecurityX Certification Exam CAS-005 Exam Questions preparation material, you will receive free updates for 365 days. BraindumpsVCE provides up-to-date CompTIA SecurityX Certification Exam exam questions, latest test dumps demo and latest test experience will make you success in your career. And price is affordable.

CompTIA CAS-005 Exam Syllabus Topics:

Topic	Details
Topic 1	• Security Operations: This domain is designed for CompTIA security architects and covers analyzing data to support monitoring and response activities, as well as assessing vulnerabilities and recommending solutions to reduce attack surfaces. Candidates will apply threat-hunting techniques and utilize threat intelligence concepts to enhance operational security.
Topic 2	• Security Architecture: This domain focuses on analyzing requirements to design resilient systems, including the configuration of firewalls and intrusion detection systems.
Topic 3	• Security Engineering: This section measures the skills of CompTIA security architects that involve troubleshooting common issues related to identity and access management (IAM) components within an enterprise environment. Candidates will analyze requirements to enhance endpoint and server security while implementing hardware security technologies. This domain also emphasizes the importance of advanced cryptographic concepts in securing systems.
Topic 4	• Governance, Risk, and Compliance: This section of the exam measures the skills of CompTIA security architects that cover the implementation of governance components based on organizational security requirements, including developing policies, procedures, and standards. Candidates will learn about managing security programs, including awareness training on phishing and social engineering.

CAS-005 Latest Exam Simulator, CAS-005 Test Topics Pdf

Successful people are those who are willing to make efforts. If you have never experienced the wind and rain, you will never see the rainbow. Giving is proportional to the reward. Now, our CAS-005 study materials just need you spend less time, then your life will take place great changes. Maybe you think that our CAS-005 study materials cannot make a difference. But you must know that if you do not have a try, your life will never be improved. It is useless that you speak boast yourself but never act. Please muster up all

your courage. No one will laugh at a hardworking person. Our CAS-005 Study Materials are your good study partner.

CompTIA SecurityX Certification Exam Sample Questions (Q90-Q95):

NEW QUESTION # 90
A security engineer wants to stay up-to-date on new detections that are released on a regular basis. The engineer's organization uses multiple tools rather than one specific vendor security stack. Which of the following rule-based languages is the most appropriate to use as a baseline for detection rules with the multiple security tool setup?

- A. YARA
- B. Rita
- C. Snort
- D. Sigma

Answer: D

Explanation:
Comprehensive and Detailed Step-by-Step Explanation:
Sigma (A) is a rule-based detection language that is vendor-agnostic, meaning it can be used across different SIEM (Security Information and Event Management) tools. Unlike YARA (B), which focuses on file-based detection, Sigma provides a standardized way to create rules that work across various security platforms.

NEW QUESTION # 91
A manufacturing plant is updating its IT services. During discussions, the senior management team created the following list of considerations:
* Staff turnover is high and seasonal.
* Extreme conditions often damage endpoints.
* Losses from downtime must be minimized.
* Regulatory data retention requirements exist.
Which of the following best addresses the considerations?

- A. Using a non-persistent virtual desktop interface with thin clients
- B. Establishing further environmental controls to limit equipment damage
- C. Maintaining an inventory of spare endpoints for rapid deployment
- D. Deploying redundant file servers and configuring database journaling

Answer: A

Explanation:
The best solution is to use a non-persistent virtual desktop infrastructure (VDI) with thin clients (B). Thin clients are inexpensive, easy to replace, and resilient in harsh environments where traditional endpoints may be damaged. With non-persistent VDI, employee desktops are virtualized and reset to a clean state after logout, reducing risks from turnover, malware persistence, or user misconfiguration. Centralized management ensures consistent patching and security updates while minimizing downtime, since damaged thin clients can be swapped quickly with minimal disruption.
Option A (environmental controls) may reduce equipment damage but does not address turnover or regulatory retention requirements. Option C (redundant servers and journaling) improves data integrity but does not solve endpoint-related risks or staffing issues. Option D (maintaining spare endpoints) mitigates hardware failures but still relies on managing and configuring full systems, which is inefficient for high-turnover environments.

NEW QUESTION # 92
A company reduced its staff 60 days ago, and applications are now starting to fail. The security analyst is investigating to determine if there is malicious intent for the application failures. The security analyst reviews the following logs:
Mar 5 22:09:50 akj3 sshd
[21502]: Success login for userOl from 192.168.2.5
Mar 5 22:10:00 akj3 sshd
[21502]: Failed login for userID from 192.168.2.5
Which of the following is the most likely reason for the application failures?

- A. The user does not have sudo access.

- B. The user's account was set as a service account.
- C. The user's home directory was deleted.
- D. The root password has been changed.

Answer: C

Explanation:
Comprehensive and Detailed Step-by-Step
When an employee leaves a company, their home directory might be deleted along with their account, leading to application failures if the directory contained configuration files, dependencies, or system scripts.

NEW QUESTION # 93

A security team determines that the most significant risks within the pipeline are:
* Unauthorized code changes
* The current inability to perform independent verification of software modules Which of the following best addresses these concerns?

- A. Code signing
- B. Digital signatures
- C. Lightweight cryptography
- D. Non-repudiation

Answer: A

Explanation:
* Unauthorized code changesand lack ofindependent verificationare directly mitigated bycode signing, which ensures that code is from a trusted source and has not been altered.
* While digital signatures are part of code signing, the broader practice of code signing encompasses signature management, version integrity, and trusted sources.
* Lightweight cryptography is irrelevant in this context; it's more about efficiency in constrained devices.
* Non-repudiation is a benefit of digital signatures but doesn't directly solve the verification/integrity concerns alone.
* FromCAS-005 Guide, Domain 4: Security Architecture, Tools, and Technologies:
* "Code signing ensures that the code has not been tampered with and originates from a trusted developer." Reference:CAS-005 Official Study Guide, Chapter 10: Secure Development Operations, pg. 201-204

NEW QUESTION # 94

A security operations analyst is reviewing network traffic baselines for nightly database backups. Given the following information:

Date	Time	Bandwidth consumed	SRC server	DST server
12/1	12:01 a.m.	11.24GB	PRDDB01	BACKUP01
12/2	12:01 a.m.	11.57GB	PRDDB01	BACKUP01
12/3	12:01 a.m.	11.70GB	PRDDB01	BACKUP01
12/3	12:46 a.m.	97.00GB	PRDDB01	85.34.17.98
12/4	12:01 a.m.	10.95GB	PRDDB01	BACKUP01

Which of the following should the security analyst do next?

- A. Quarantine PRDDB01 and then alert the database engineers
- B. Consult with a network engineer to determine the impact of bandwidth usage
- C. Review all the network logs for further data exfiltration
- D. Refer to the incident response playbook for the proper response

Answer: C

NEW QUESTION # 95

......

The CompTIA SecurityX Certification Exam (CAS-005) certification has become a basic requirement to advance rapidly in the information technology sector. Since CompTIA SecurityX Certification Exam (CAS-005) actual dumps are vital to prepare quickly for the examination. Therefore, you will need them if you desire to ace the CompTIA SecurityX Certification Exam (CAS-005)

exam in a short time.
