## 220-1202認定デベロッパー、220-1202資格認定

220-1202トレーニング資料を用意しました。これらは、保証期間中の専門的な練習資料です。参考のために許容できる価格に加えて、3つのバージョンのすべての資料は、10年以上にわたってこの分野の専門家によって編集されています。さらに、一連の利点があります。したがって、220-1202の実際のテストの重要性は言うまで

ありません。今すぐご注文いただいた場合、1年間無料の更新をお送りします。これらのサプリメントはすべて、220-1202模擬試験にも役立ちます。

## CompTIA A+ Certification Exam: Core 2 認定 220-1202 試験問題 (Q94-Q99):

### 質問 # 94

Which of the following commands is used to manage files in a Linux OS?

- A. robocopy
- **B. cp**
- C. curl
- D. xcopy

正解: B

解説:

The correct answer is D. cp, which is a core Linux command used to copy files and directories. File management in Linux is performed primarily through command-line utilities, and cp is one of the most fundamental commands for this purpose.

According to the Quentin Docter - CompTIA A+ Complete Study Guide, Linux administrators frequently use commands such as cp, mv, rm, and ls to manage files. The cp command allows users to copy files between directories or locations and supports options for recursive copying and permission preservation.

The Travis Everett & Andrew Hutz - All-in-One Exam Guide highlights that Linux file management commands differ significantly from Windows equivalents. While Windows uses robocopy and xcopy, Linux relies on simpler, built-in commands like cp.

The Mike Meyers / Mark Soper Lab Manual further explains that curl is used for transferring data over network protocols, not for managing local files. Commands such as robocopy and xcopy are Windows-specific and not available in standard Linux environments.

Because the question asks specifically about managing files in Linux, and cp is a native Linux file-management command, D is the correct answer.

### 質問 # 95

A technician is unable to upgrade a desktop computer from Windows 10 to Windows 11. Which of the following is most likely preventing the upgrade?

- A. Slow HDD spindle speed
- B. Low refresh rate
- C. High RAM latency
- **D. Missing TPM module**

正解: D

解説:

A missing TPM (Trusted Platform Module) is a common requirement for Windows 11, and its absence is most likely preventing the upgrade.

### 質問 # 96

A technician needs to prevent accidental access to Wi-Fi networks available in a shared office space. The BYOD and company-owned devices already have Wi-Fi settings configured via MDM solutions. Which of the following settings should the technician change?

- **A. SSID configuration**
- B. IP filtering configuration
- C. Content filtering configuration
- D. Port forwarding/mapping

正解: A

解説:

The correct answer is B. SSID configuration, because controlling SSID visibility and behavior directly affects which wireless

networks devices can see and attempt to join. In shared office environments, multiple Wi-Fi networks may be present, increasing the risk of users accidentally connecting to the wrong network.

According to the Quentin Docter - CompTIA A+ Complete Study Guide, SSIDs define how wireless networks are advertised and discovered. By modifying SSID settings-such as disabling broadcast or restricting auto-join behavior-technicians can prevent devices from attempting to connect to unauthorized or unintended networks.

The Travis Everett & Andrew Hutz - All-in-One Exam Guide explains that MDM solutions often preconfigure approved wireless profiles. Adjusting SSID configuration ensures devices only recognize and connect to sanctioned networks, reducing accidental associations and security risks.

The Mike Meyers / Mark Soper Lab Manual clarifies that IP filtering, content filtering, and port forwarding are network traffic control mechanisms. They do not prevent a device from seeing or attempting to connect to nearby Wi-Fi networks.

Because the goal is to prevent accidental Wi-Fi access, not filter traffic after connection, modifying SSID configuration is the correct and most effective solution.

#### 質問 #97

The touch pad on a user's computer is not working. When the user connects a mouse to the computer, the cursor works normally. Which of the following should a technician use to check for driver updates?

- A. gpedit.msc
- B. certmgr.msc
- C. devmgmt.msc
- D. lusrmgr.msc

正解: C

解説:

devmgmt.msc opens Device Manager, which is the tool used to check, update, or reinstall hardware drivers such as the touchpad driver.

#### 質問 #98

Which of the following is used to detect and record access to restricted areas?

- A. Fence
- B. Bollards
- C. Badge readers
- D. Video surveillance

正解: C

解説:

Comprehensive and Detailed Explanation From Exact Extract:

Badge readers are electronic access control systems that require authorized users to scan a badge (e.g., RFID or magnetic strip cards) to gain access to restricted physical locations. These systems typically log all access attempts-successful or denied-providing both detection and recording of access events.

A: Bollards are physical barriers to prevent vehicle access.

B: Video surveillance can record access visually but does not track identity unless integrated with access control systems.

D: A fence restricts access but doesn't detect or record who entered.

Reference:

CompTIA A+ 220-1102 Objective 2.4: Compare and contrast physical security measures.

Study Guide Section: Physical access controls (e.g., badge readers, mantraps)

#### 質問 #99

.....

あなたはいい仕事を見つけたい場合、220-1202参考資料を選択してください。多くのお客様は220-1202試験参考書を選択したら、220-1202認定試験資格証明書を取得しました。また、CompTIAのサービスもいいし、24時間のサービスを提供できます。だから、それは最もいい資料です。

220-1202認定デベロッパー: <https://www.mogiexam.com/220-1202-exam.html>

くそ、覚えてろ 掴んだ胸を突き飛ばしてから、まさに遁走と言った様子で220-1202、黒瀬が走って逃げて行った、実際奇警な話じゃないか、ダ・ヴィンチでもいいそうな事だよねなるほど奇警には相違ないなと主人は半分降参をした。

それで、あなたは弊社を信じて、我々のCompTIA A+ Certification Exam: Core 2最新テスト問題集を選んでいま  
す、我々のすべての努力はあなたにCompTIAの220-1202試験に合格させるためです、一部のお客様は時間を無
