### ServiceNow - CSA - Key ServiceNow Certified System Administrator Concepts

With the principles of serve first and customers first, we will company you during you whole preparation. We offer you free demo before buying CSA exam dumps of us, and you can get your downloading link and password when you finish your payment. And you can get them about ten minutes after your payment. What's more, we have free update for one year after purchasing, and the updated version will send to your email automatically. If you have any questions about the CSA Exam Dumps, you can consult our online service stuff.

### ServiceNow Certified System Administrator Sample Questions (Q63-Q68):

#### NEW QUESTION # 63

Which one of the following is an accurate list of changes that are captured in an Update Set?

- A. Changes made to: tables, forms, Business Rules, and data records
- **B. Changes made to tables, forms, schedules, and client scripts**
- C. Changes made to tables, forms, views, and fields
- D. Changes made to: tables, forms groups, and configuration items (CIs)

#### Answer: B

#### Explanation:

An Update Set in ServiceNow is a mechanism for capturing and migrating customizations and configurations from one instance to another (e.g., Development → Test → Production).

What is Captured in an Update Set?

Update Sets record configuration changes, such as:

- Tables & Database Schema Changes (e.g., new tables, modified fields)
- Form Layout & UI Changes (e.g., changes in form views, UI policies)
- Schedules (e.g., Scheduled Jobs, Business Rules with scheduled actions)
- Client Scripts (e.g., JavaScript running on the client side)
- Business Rules, UI Actions, UI Policies
- Workflows, Script Includes, ACLs (Access Control Rules)
- Email Notifications, Dictionary Entries, Application Menus

What is NOT Captured in an Update Set?

- Data Records (e.g., Incident, Change Request, CMDB data)
- Group Memberships & User Data
- System Properties (some properties may require manual migration)
- Attachments & Scheduled Reports

Why Other Options Are Incorrect?

B. Changes made to tables, forms, views, and fields  (Incorrect)

Views and Fields are part of UI changes, but schedules and client scripts are also included in Update Sets, making Option A more complete.

C. Changes made to tables, forms, Business Rules, and data records  (Incorrect) Data records (actual table entries like incidents or change requests) are NOT captured in Update Sets.

D. Changes made to tables, forms, groups, and configuration items (CIs)  (Incorrect) Groups and CIs (CMDB data) are considered data and are NOT included in Update Sets.

Instead, CIs should be migrated using Import Sets or CMDB data export/import.

#### NEW QUESTION # 64

What refers to an application or system that accesses a remote service or another computer system, known as a server?

- A. Script
- B. Server
- C. Policies
- **D. Client**

**Answer: D**

Explanation:

In computing and networking, a client refers to an application or system that accesses a remote service or another computer system (known as a server). The client-server model is a fundamental concept in computing, where:

A client sends requests to a server.

The server processes the request and sends back a response.

This architecture is widely used in web applications, databases, and ServiceNow itself, where clients interact with the ServiceNow platform (server) via a web browser or API requests.

In ServiceNow, the client typically refers to a user's browser or an external system making requests via API calls.

The server is the ServiceNow instance, which processes requests and returns responses.

Client-side scripts (such as Client Scripts or UI Policies) run on the user's browser, while server-side scripts (such as Business Rules and Script Includes) execute on the ServiceNow server.

How This Relates to ServiceNow:

A: Server# A server receives requests and processes them but is not the requesting entity.

C: Script# A script is a piece of code that executes certain actions but does not represent an entire system accessing a service.

D: Policies# Policies define rules or behaviors (e.g., UI Policies, Data Policies) but do not access a remote service.

Why Other Options Are Incorrect:

ServiceNow Documentation: Client and Server in ServiceNow

CSA Exam Guide: Covers Client and Server architecture in ServiceNow.

#### NEW QUESTION # 65

A manager wants to view a snapshot of month-end Sales performance data, as compared to Sales targets. In addition, the manager wants to be able to see those monthly numbers trended over time, and forecasted into the future. What capability do you suggest for this manager?

- **A. Performance Analytics**
- B. Scheduled Reports and Excel
- C. Scheduled Reports, a custom snapshot table, and a Trend report
- D. Scheduled Reports, a custom snapshot table, and a Projection report
- E. Key Performance Indicators (KPIs) - KPIs track metrics but do not inherently provide trend analysis or forecasting.

**Answer: A**

Explanation:

Reference:

ServiceNow Performance Analytics - Forecasting Data

Explanation:

Performance Analytics (PA) is the best solution for the manager's requirements because it provides:

Snapshot of Sales Performance Data - PA allows the creation of historical and real-time dashboards to track sales performance against targets.

Trend Analysis Over Time - With PA, historical data is captured and can be visualized in trend reports, showing patterns over time.

Forecasting Capabilities - PA includes predictive intelligence that can project future trends based on past performance, helping managers make data-driven decisions.

Why Not Other Options?

- A . Scheduled Reports, a custom snapshot table, and a Trend report - While reports and snapshots provide historical data, they do not offer forecasting capabilities.
- B . Scheduled Reports and Excel - Excel is static and does not provide built-in forecasting or trend analysis.
- C . Scheduled Reports, a custom snapshot table, and a Projection report - This approach is manual and lacks the dynamic analytics that PA provides.

#### NEW QUESTION # 66

What are the 5 provided Roles by ServiceNow?

- A. Fulfiller: Users with the ITIL role may fulfill ITIL activities associated with the ITIL workflow, including Incident and Change management.
- B. Requester: Also known as Employee Self Service (ESS) users, these users have no roles but can submit and manage their own requests, access public pages, etc.
- C. Specialized Administrator: Specialized administrator roles manage specific functions or applications, such as Assignment Rules, Knowledge base, reports, or web services
- D. System Administrator: The admin role provides access to all platform features, applications, functions and data.
- E. Approver: Users with the Approver user role can perform all requester actions and may view or modify approval records directed to the approver

**Answer: E**

#### NEW QUESTION # 67

A customer wants to use a client script to validate things on a form in order to make sure the submission makes sense. What type of client script would you recommend to meet this requirement?

- A. onLoad
- B. onSubmit()
- C. onSubmit()
- D. onUpdate()

**Answer: C**

Explanation:

In ServiceNow, Client Scripts run on the client-side (browser) and modify form behavior dynamically.

To validate form data before submission, you must use an onSubmit() Client Script.

Why is "onSubmit()" the Correct Answer?

Executes Before Form Submission

The onSubmit() Client Script runs just before the form is submitted, allowing validation checks.

If an issue is found, you can prevent form submission using return false;.

Best for Data Validation

Can check if required fields are filled.

Can enforce business rules on the client-side.

Example: Preventing submission if the "Short Description" field is empty.

Example onSubmit() Client Script:

```
function onSubmit() {  
    var shortDesc = g_form.getValue('short_description');  
    if(!shortDesc) {  
        alert('Short Description is required before submitting.');
```

return false; // Stops the form from being submitted

return true; // Allows form submission

Incorrect Answer Choices Analysis:

- A . onSubmit()
- Incorrect - This is not a valid ServiceNow Client Script type.
- C . onLoad
- Incorrect - Runs when the form loads, but does not validate form submission.

D . onUpdate()

❑ Incorrect - Runs when a record is updated, but does not control form submission.
