Microsoft AZ-204 Test Questions Vce & AZ-204 Reliable Braindumps Questions

Dear candidates, pass your test with our accurate & updated AZ-204 training tools. As we all know, the well preparation will play an important effect in the AZ-204 actual test. Now, take our AZ-204 as your study material, and prepare with careful, then you will pass successful. If you really want to choose our Microsoft AZ-204 PDF torrents, we will give you the reasonable price and some discounts are available. What's more, you will enjoy one year free update after purchase of AZ-204 practice cram.

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q201-Q206):

NEW QUESTION # 201

A company is developing a gaming platform. Users can join teams to play online and see leaderboards that include player statistics. The solution includes an entity named Team.

You plan to implement an Azure Redis Cache instance to improve the efficiency of data operations for entities that rarely change.

You need to invalidate the cache when team data is changed.

How should you complete the code? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

```
void ClearCachedTeams()
{
    ▼
    IDatabase cache = Connection.GetDatabase();
    ICache cache = Connection.GetDatabase();

    ▼
    cache.KeyDelete("teams");
    cache.StringSet("teams","");
    cache.ValueDelete("teams");
    cache.StringGet("teams", "");

    viewBag.nsg += Team data removed from cache. ";
}
```

Answer:

Explanation:

```
void ClearCachedTeams()
{
    ▼
    IDatabase cache = Connection.GetDatabase();
    ICache cache = Connection.GetDatabase();

    ▼
    cache.KeyDelete("teams");
    cache.StringSet("teams","");          |
    cache.ValueDelete("teams");
    cache.StringGet("teams", "");

    viewBag.nsg += Team data removed from cache. ";
}
```

Explanation

Box 1: IDatabase cache = connection.GetDatabase();

Connection refers to a previously configured ConnectionMultiplexer.

Box 2: cache.StringSet("teams",")

To specify the expiration of an item in the cache, use the TimeSpan parameter of StringSet.

cache.StringSet("key1", "value1", TimeSpan.FromMinutes(90));

NEW QUESTION # 202

You are developing an application that use an Azure blob named data to store application data. The application creates blob snapshots to allow application state to be reverted to an earlier state. The Azure storage account has soft deleted enabled.

The system performs the following operations in order:

*The blob is updated

*Snapshot 1 is created.

*Snapshot 2 is created.

*Snapshot 1 is deleted.

A system error then deletes the data blob and all snapshots.

You need to determine which application states can be restored.

What is the restorability of the application data? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Application State   **Restorability**

Data blob
| ▼ |
| Can be restored |
| Cannot be restored |

Snapshot 1
| ▼ |
| Can be restored |
| Cannot be restored |

Snapshot 2
| ▼ |
| Can be restored |
| Cannot be restored |

Answer:

Explanation:

Application State   **Restorability**

Data blob
| ▼ |
| Can be restored |
| Cannot be restored |

Snapshot 1
| ▼ |
| Can be restored |
| Cannot be restored |

Snapshot 2
| ▼ |
| Can be restored |
| Cannot be restored |

Explanation

Box 1: Can be restored
When enabled, soft delete enables you to save and recover your data when blobs or blob snapshots are deleted.
This protection extends to blob data that is erased as the result of an overwrite.
Box 2: Cannot be restored
It has been deleted.
Box 3: Can be restored
It has not been deleted.

NEW QUESTION # 203
You need to support the message processing for the ocean transport workflow.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

Step 1: Create an integration account in the Azure portal
You can define custom metadata for artifacts in integration accounts and get that metadata during runtime for your logic app to use.
For example, you can provide metadata for artifacts, such as partners, agreements, schemas, and maps - all store metadata using key-value pairs.
Step 2: Link the Logic App to the integration account
A logic app that's linked to the integration account and artifact metadata you want to use.
Step 3: Add partners, schemas, certificates, maps, and agreements
Step 4: Create a custom connector for the Logic App.

NEW QUESTION # 204
You are preparing to deploy a Python website to an Azure Web App using a container. The solution will use multiple containers in the same container group. The Dockerfile that builds the container is as follows:
You build a container by using the following command. The Azure Container Registry instance named images is a private registry.
The user name and password for the registry is
The Web App must always run the same version of the website regardless of future builds.
You need to create an Azure Web App to run the website.
How should you complete the commands? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: --SKU B1 --hyper-v
--hyper-v
Host web app on Windows container.
Box 2: --deployment-source-url images.azurecr.io/website:v1.0.0
--deployment-source-url -u
Git repository URL to link with manual integration.
The Web App must always run the same version of the website regardless of future builds.
Incorrect:
--deployment-container-image-name -i
Linux only. Container image name from Docker Hub, e.g. publisher/image-name:tag.
Box 3: az webapp config container set -url https://images.azurecr.io -u admin -p admin az webapp config container set Set a web app container's settings.
Paremeter: --docker-registry-server-url -r
The container registry server url.
The Azure Container Registry instance named images is a private registry.
Example:
az webapp config container set --docker-registry-server-url https://{azure-container-registry-name}.azurecr.io Reference:
https://docs.microsoft.com/en-us/cli/azure/appservice/plan

NEW QUESTION # 205
All functions in the app meet the following requirements:
* Run until either a successful run or until 10 run attempts occur.
* Ensure that there are at least 20 seconds between attempts for up to 15 minutes.
You need to configure the hostjson file.
How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:
