# Valid CNX-001 Exam Cram, CNX-001 Certification Practice

The TestPassKing CNX-001 exam questions are real, valid, and updated CNX-001 exam questions that assist you in exam preparation and finally, you will be ready to pass the challenging CNX-001 exam with good scores. The TestPassKing CNX-001 exam questions are designed and verified by experienced and certified CompTIA CNX-001 Exam trainers. They check and verified the answers of all CNX-001 exam questions thoroughly and ensure the top standard of CNX-001 exam questions.

CNX-001 certifications are one of the most popular certifications currently. Earning CNX-001 certification credentials is easy, in first attempt, with the help of products. TestPassKing is well-reputed brand among the professional. That provides the best preparation materials for CNX-001 Certification exams. TestPassKing has a team of CNX-001 subject experts to develop the best products for CNX-001 certification exam preparation.

## CNX-001 Certification Practice | Exam CNX-001 Registration

As everybody knows, the most crucial matter is the quality of CompTIA CloudNetX Certification Exam study question for learners. We have been doing this professional thing for many years. Let the professionals handle professional issues. So as for us, we have enough confidence to provide you with the best CNX-001 exam questions for your study to pass it. With many years work experience, we have fast reaction speed to market change and need. In this way, we have the Latest CNX-001 Test Guide. You don't worry about that how to keep up with the market trend, just follow us. In addition to the industry trends, the CNX-001 test

guide is written by lots of past materials' rigorous analyses. Only with strict study, we write the latest and the specialized study materials. We can say that our CNX-001 exam questions are the most suitable for examinee to pass the exam.

# CompTIA CloudNetX Certification Exam Sample Questions (Q82-Q87):

**NEW QUESTION # 82**
A network architect is designing a solution to secure the organization's applications based on the security policy. The requirements are:
* Users must authenticate using one set of credentials.
* External users must be located in authorized sites.
* Session timeouts must be enforced.
* Network access requirements should be changed as needed.
Which of the following best meet these requirements? (Choose two.)

- A. Single sign-on
- B. Static IP allocation
- C. Conditional access policy
- D. Role-based access
- E. Risk-based authentication
- F. Multifactor authentication

**Answer: A,C**

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
B: Single Sign-On (SSO) - SSO enables users to authenticate once using a unified set of credentials and gain access to multiple applications. It improves user experience and simplifies identity management.
E: Conditional Access Policy - This supports dynamic enforcement of access policies based on user location, device, risk level, and session characteristics. It allows administrators to define rules such as only allowing access from authorized geographic regions and automatically enforcing session timeouts or requiring reauthentication.
Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Identity and Access Management (IAM)":
"SSO provides seamless authentication across services while reducing password fatigue and attack surfaces."
"Conditional Access enforces access controls based on real-time conditions such as location, device compliance, and session context, supporting dynamic security postures." Other options:
* A. Role-based access defines permissions but does not handle location or session control.
* C. Static IP allocation does not offer user-based access controls.
* D. MFA enhances security but is not directly aligned with all the listed requirements.
* F. Risk-based authentication evaluates threat levels but does not handle session timeout or location enforcement directly.

**NEW QUESTION # 83**
A cloud engineer is planning to build VMs in a public cloud environment for a cloud migration. A cloud security policy restricts access to the console for new VM builds. The engineer wants to replicate the settings for each of the VMs to ensure the network settings are preconfigured. Which of the following is the best deployment method?

- A. CLI command
- B. Custom SDK
- C. API script
- D. IaC template

**Answer: D**

Explanation:
Using an Infrastructure-as-Code template lets you define and version all VM configurations, including network settings, in code that's automatically applied during deployment, eliminating the need for console changes and ensuring consistency across each build.

**NEW QUESTION # 84**
Security policy states that all inbound traffic to the environment needs to be restricted, but all external outbound traffic is allowed within the hybrid cloud environment. A new application server was recently set up in the cloud. Which of the following would most

likely need to be configured so that the server has the appropriate access set up? (Choose two.)

- A. Network security group
- B. Firewall
- C. Port security
- D. Application gateway
- E. IPS
- F. Screened subnet

**Answer: A,B**

Explanation:
A perimeter firewall enforces the organization's "deny inbound by default, allow all outbound" policy at the edge of the cloud environment, while an Azure-style NSG applies the same rule set at the VM/subnet level.
Together they ensure no inbound connections slip through and that outbound traffic remains unrestricted.

## NEW QUESTION # 85
Which of the following helps the security of the network design to align with industry best practices?

- A. Licensing agreement
- B. Reference architectures
- C. Memorandum of understanding
- D. Service-level agreement

**Answer: B**

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Reference architectures are pre-defined templates or blueprints provided by vendors, standardsbodies, or industry alliances (e.g., NIST, CIS, vendor frameworks) that define recommended practices for secure and reliable infrastructure design. They help ensure alignment with compliance, security controls, and industry- recognized configurations.
Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Architecture Standards and Security Best Practices":
"Reference architectures guide the implementation of secure, scalable, and compliant infrastructure. They embody industry best practices and reduce misconfiguration risks in cloud and hybrid environments." Other options:
* B. Licensing agreements pertain to software usage rights, not security alignment.
* C. SLAs define service expectations, not design standards.
* D. MOUs are informal agreements between parties, not technical or security frameworks.

## NEW QUESTION # 86
A network engineer is setting up guest access on a Wi-Fi network. After a recent network analysis, the engineer discovered that a user could access the guest network and attack the corporate network, since the networks share the same VLAN. Which of the following should the engineer do to prevent an attack like this one from happening?

- A. Set up a strong password on the guest wireless network.
- B. Set up a captive portal so all guest users have to register before gaining access to the wireless network.
- C. Configure Layer 2 client isolation for the wireless network.
- D. Set up a MAC filtering rule and add the MAC addresses of all corporate devices to the allow list.

**Answer: C**

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Layer 2 client isolation ensures that devices connected to the same wireless network (such as a guest SSID) cannot communicate with each other or other VLANs. This prevents guest users from scanning or attacking internal devices. It's a fundamental security control for guest Wi-Fi access.
Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Wireless Network Segmentation and Security":
"Client isolation prevents peer-to-peer attacks over Wi-Fi by ensuring wireless clients cannot communicate with one another, a necessary control on shared guest networks." Other options:
* B. MAC filtering is easy to spoof and hard to manage at scale.

* C. Strong passwords improve access control but don't isolate guest traffic.
* D. Captive portals add a registration layer but don't address VLAN or broadcast isolation.

**NEW QUESTION # 87**
......

Our CNX-001 exam preparation materials are the hard-won fruit of our experts with their unswerving efforts in designing products and choosing test questions. Pass rate is what we care for preparing for an examination, which is the final goal of our CNX-001 certification guide. According to the feedback of our users, we have the pass rate of 99%, which is equal to 100% in some sense. The high quality of our products also embodies in its short-time learning. You are only supposed to practice CNX-001 Guide Torrent for about 20 to 30 hours before you are fully equipped to take part in the examination.
