Citrix Virtual Apps and Desktops Administration Sample Questions (Q47-Q52):

NEW QUESTION # 47

Scenario: A Citrix Administrator is enabling TLS Secure connections between the Cloud Connectors and on-premises StoreFront. After configuring the TLS certificate on all Cloud Connectors and disabling HTTP connections, the administrator finds that no resources are being enumerated.

Which extra step does the administrator need to take to allow enumeration to work between on- premises StoreFront and Citrix Cloud?

- A. Configure Cloud Connectors to allow unsecured connections.
- B. Install Internet Information Services (IIS) on the Cloud Connector.
- C. Change transport type to HTTPS in the StoreFront store DDC list.
- D. Configure Internet Information Services (IIS) on the StoreFront server to use HTTPS.

Answer: A

NEW QUESTION # 48

Which two statements are valid when using Citrix Profile Streaming? (Choose two.)

- A. The files and folders are fetched on demand.
- B. Profile Streaming will delay the logon process.
- C. Profile Streaming is disabled by default.
- D. Registry entries and files in the pending area are fetched when accessed.

Answer: A,D

Explanation:

With Citrix Profile Streaming, parts of the user profile (such as registry entries and files) are loaded on demand instead of fully at logon. This reduces logon time by fetching profile components only when accessed during the session.

NEW QUESTION # 49

Which Citrix Director view will allow a Citrix Administrator to view data on the current CPU, as well as memory and disk latency for a machine running the Virtual Delivery Agent (VDA)?

- A. Capacity Management
- B. Machine Utilization
- C. Load Evaluator Index
- D. Resource Utilization

Answer: D

Explanation:

The Resource Utilization view in Citrix Director provides real-time data on CPU, memory usage, and disk latency for VDA machines. This allows administrators to monitor system performance and identify resource bottlenecks affecting user sessions.

NEW QUESTION # 50

A user complains to a Citrix Administrator that application load time is long when they log on at the beginning of the work day. Which feature can the administrator enable to reduce the perceived start time of the user's application?

- A. Application Keyword
- B. Application Lingering
- C. Application Limits
- D. Application Prelaunch

Answer: D

Explanation:

Application Prelaunch starts an application session in the background before the user explicitly launches it. This reduces perceived application load time, especially at the beginning of the work day, by keeping sessions ready for faster access.

NEW QUESTION # 51

Scenario: A Citrix Administrator configures the 'Auto connect client drives' user settings to map client drives within the HDX session for all published desktops. The setting is configured in a Baseline Group Policy Object (GPO) and linked to an Organizational Unit (OU) that contains all of the published desktops. When a user launches the desktop, client drives are NOT mapped. What is a possible reason?

- A. The GPO needs to be linked to the User OU.
- B. Desktops need to be restarted for the policy to be applied.
- C. gpupdate /force needs to be executed on all of the machines.
- D. Loopback processing is NOT enabled.

Answer: D

Explanation:

User settings in a GPO linked to a machine OU only apply if loopback processing is enabled.

Since the "Auto connect client drives" setting is a user policy but applied at the desktop OU level, loopback processing must be enabled for the policy to take effect within the HDX sessions.
