

100% Pass Quiz Ping Identity - PAP-001 - Trustable Certified Professional - PingAccess New Study Plan

BONUS!!! Download part of TestKingFree PAP-001 dumps for free: <https://drive.google.com/open?id=1eeVurufAyLvhmQatB79b13AZXLDmNdNy>

Only if you download our software and practice no more than 30 hours will you attend your test confidently. Because our PAP-001 exam torrent can simulate limited-timed examination and online error correcting, it just takes less time and energy for you to prepare the PAP-001 exam than other study materials. It is very economical that you just spend 20 or 30 hours then you have the PAP-001 certificate in your hand, which is typically beneficial for your career in the future. Therefore, purchasing the PAP-001 guide torrent is the best and wisest choice for you to prepare your test.

Although it is not an easy thing for somebody to pass the exam, TestKingFree can help aggressive people to achieve their goals. More qualified certification for our future employment has the effect to be reckoned with, only to have enough qualification certifications to prove their ability, can we win over rivals in the social competition. So the PAP-001 Certification has also become more and more important for all people. Because a lot of people long to improve themselves and get the decent job. In this circumstance, more and more people will ponder the question how to get the PAP-001 certification successfully in a short time.

Hot PAP-001 New Study Plan & Useful Tips to help you pass Ping Identity PAP-001

I can assure you that we will provide considerate on line after sale service about our PAP-001 exam questions for you in twenty four hours a day, seven days a week. Therefore, after buying our PAP-001 study guide, if you have any questions about our PAP-001 Learning Materials, please just feel free to contact with our online after sale service staffs. They will give you the most professional advice for they know better on our PAP-001 training quiz.

Ping Identity Certified Professional - PingAccess Sample Questions (Q10-Q15):

NEW QUESTION # 10

An application is hosted on a server that requires clients to authenticate using a username:password pair. This application is behind PingAccess, which is acting as a gateway. What action should the administrator take to allow PingAccess to access the application?

- A. Configure a Mutual TLS Site Authenticator to the Site
- B. Apply a valid Web Session that contains the username and password
- **C. Configure a Basic Authentication Site Authenticator to the Site**
- D. Apply an Identity Mapping that includes the username and password

Answer: C

Explanation:

When a back-end site requires HTTP Basic Authentication, PingAccess supports this via a Basic Authentication Site Authenticator. The authenticator is configured with credentials so that PingAccess can successfully authenticate to the target site.

Exact Extract:

"PingAccess can authenticate to target sites using a Site Authenticator. Use the Basic Authentication Site Authenticator when the site requires a username and password."

* Option A is incorrect - identity mappings are used to forward user attributes, not for site-to-site authentication.

* Option B is incorrect - web sessions represent end-user sessions, not back-end credentials.

* Option C is correct - the Basic Authentication Site Authenticator should be configured on the Site.

* Option D is incorrect - mTLS authenticates with certificates, not username/password.

Reference: PingAccess Administration Guide - Site Authenticators

NEW QUESTION # 11

What is the purpose of the Mutual TLS Site Authenticator?

- A. Allows PingAccess to authenticate to the token provider
- **B. Allows PingAccess to authenticate to the backend server**
- C. Allows the backend server to authenticate to PingAccess
- D. Allows the user to authenticate to the backend server

Answer: B

Explanation:

Mutual TLS (mTLS) is used to establish two-way authentication where both the client and the server present certificates to prove their identity. In the case of PingAccess, a Mutual TLS Site Authenticator is configured when PingAccess acts as a reverse proxy making requests to a backend (target) server.

* Exact Extract from PingAccess documentation:

"Mutual TLS site authenticators provide client certificate authentication when PingAccess connects to a backend site. This allows PingAccess to present its certificate to the target server during the TLS handshake." This means the purpose is for PingAccess (client) to authenticate itself to the backend server (target resource) when establishing a secure connection.

Why other options are wrong:

* A. Allows the backend server to authenticate to PingAccess

* Incorrect. That's normal server-side TLS authentication (the server presents a cert to the client), not mutual TLS initiated by PingAccess.

* B. Allows the user to authenticate to the backend server

* Incorrect. End users do not directly use this setting; this is between PingAccess and the backend application server.

* C. Allows PingAccess to authenticate to the backend server

* Correct. This is exactly the definition of a Mutual TLS Site Authenticator in PingAccess.

* D. Allows PingAccess to authenticate to the token provider

* Incorrect. That would involve OIDC/OAuth token exchange and possibly TLS trust, but it's not the role of the Site Authenticator.

Thus, the correct answer is C. Allows PingAccess to authenticate to the backend server.

Reference: PingAccess Administration Guide - Configuring Site Authenticators (Mutual TLS).

NEW QUESTION # 12

What is the purpose of the admin.auth configuration setting?

- A. To configure SSO for the administrative user interface.
- B. To enable automatic authentication to the PingAccess administrative console.

- C. To define the method to use for authenticating to the administrative API.
- D. To override the SSO configuration for the administrative user interface.

Answer: D

Explanation:

The `admin.authsetting` in the `run.properties` file is used to specify a fallback authentication method for the administrative console.

Exact Extract from official documentation:

"To define a fallback administrator authentication method if the OIDC token provider is unreachable, enable the `admin.auth=`native property in the `run.properties` file. This overrides any configured administrative authentication to basic authentication." This makes it clear that the purpose of `admin.auth` is to override any configured SSO for the admin UI and enforce native (basic) authentication instead.

- * Option A is incorrect because `theadmin.authsetting` does not configure SSO. SSO for the admin UI is configured separately.
- * Option B is incorrect because this setting does not apply to the administrative API; it specifically applies to the admin UI console.
- * Option C is correct because it directly reflects the documented behavior: `admin.auth` overrides SSO configuration for the administrative UI and enables native authentication.
- * Option D is incorrect because the setting does not enable automatic authentication. It still requires credentials, but falls back to basic auth.

NEW QUESTION # 13

A financial application should be prompted for step-up authentication on a URL that allows money transfers.

A previous administrator configured rules to be applied on the required application URL. Users are not prompted for step-up authentication when accessing the `/sranafemmeneyURL` endpoint.

Which two actions should the administrator take? (Choose 2 answers.)

- A. Verify that an authentication requirement rule is applied to the application to see if a user has met the required authentication context
- B. Make sure that the existing rule's authentication requirements contain the appropriate minimum authentication requirements
- C. Create a new identity mapping containing authentication context values and add the mapping to the existing rule
- D. Make sure that the existing rule's token validation contains the appropriate minimum authentication requirements
- E. Verify that a rejection handler rule exists and is applied to the application to see if a user has met the required authentication context

Answer: A,B

Explanation:

Step-up authentication in PingAccess is enforced through Authentication Requirement Rules. If users are not prompted, the likely issues are:

- * The rule is missing from the application/resource.
- * The rule's minimum authentication context does not include MFA.

Exact Extract:

"Authentication requirement rules determine whether PingAccess will challenge a user with additional authentication (such as MFA).

Ensure that the rule is applied to the resource and that the authentication context is set correctly."

- * Option A is incorrect - rejection handlers define error handling, not MFA enforcement.
- * Option B is correct - verify the authentication requirement rule is applied.
- * Option C is correct - ensure the rule contains the right MFA requirements.
- * Option D is incorrect - identity mappings do not enforce step-up authentication.
- * Option E is incorrect - token validation rules check validity, not MFA levels.

NEW QUESTION # 14

Which two protocols does PingAccess use for authentication and authorization? (Choose 2 answers.)

- A. WS-Fed
- B. WS-Trust
- C. SAML
- D. OAuth2
- E. OIDC

Answer: D,E

Explanation:

PingAccess is designed to work with modern identity protocols. It does not support legacy WS-* protocols directly.

Exact Extract:

"PingAccess integrates with OAuth 2.0 and OpenID Connect (OIDC) to provide authentication and authorization for web and API resources."

* Option A (SAML) is incorrect - PingAccess does not natively consume SAML assertions; SAML can be used indirectly via PingFederate.

* Option B (WS-Fed) is not supported.

* Option C (WS-Trust) is not supported.

* Option D (OAuth2) is correct - used for authorization and token validation.

* Option E (OIDC) is correct - used for user authentication and sessions.

NEW QUESTION # 15

.....

We all need some professional certificates such as PAP-001 to prove ourselves in different working or learning condition. So making right decision of choosing useful practice materials is of vital importance. Here we would like to introduce our PAP-001 practice materials for you with our heartfelt sincerity. With passing rate more than 98 percent from exam candidates who chose our PAP-001 study guide, we have full confidence that your PAP-001 exam will be a piece of cake by them.

PAP-001 Study Materials: <https://www.testkingfree.com/Ping-Identity/PAP-001-practice-exam-dumps.html>

Ping Identity PAP-001 New Study Plan We also hope that our products are really worth buying. If you have any questions about PAP-001 Study Materials - Certified Professional - PingAccess test torrent or there are any problems existing in the process of the refund you can contact us by mails or contact our online customer service personnel and we will reply and solve your doubts or questions promptly. Then you can free download the demos of our PAP-001 study guide, and you can have a experience on them before you pay for them.

The questions & answers from the PAP-001 study material are all valid and accurate, made by the efforts of a professional IT team. For example, free online social networking web sites PAP-001 Valid Practice Materials need many virtual machines to support many users and save large numbers of media files.
