## Oracle Payroll Cloud 2024 Implementation Professional Sample Questions (Q71-Q76):

### NEW QUESTION # 71

A line manager has hired a worker who will be paid on a weekly basis. What navigation path should the payroll user take to enter the weekly payroll details for the worker?

- A. Manage Work Relationship > Assignment Record
- B. Manage Payroll Relationship > Assignment Record**
- C. Manage Work Relationship > Work Relationship Record
- D. Manage Payroll Relationship > Payroll Relationship Record

**Answer: B**

Explanation:

In Oracle Payroll Cloud, to enter payroll details (e.g., weekly payroll assignment) for a newly hired worker, the payroll user should navigate to Manage Payroll Relationship > Assignment Record (Option B). The Payroll Relationship defines the worker's payroll association, and the Assignment Record within it is where payroll-specific details, such as the weekly payroll definition, are assigned at the assignment level. Option A (Work Relationship Record) is for employment terms, not payroll specifics. Option C (Payroll Relationship Record) is too broad, as payroll details are managed at the assignment level within the relationship. Option D (Work Relationship > Assignment Record) is incorrect, as payroll details are managed under Payroll Relationship, not Work Relationship. Oracle documentation specifies this navigation for payroll setup.

### NEW QUESTION # 72

You need to associate a worker to your customer's weekly payroll but the payroll field only displays values for the monthly and by-weekly payrolls.

Which two issues are the source of problem? (Choose two.)

- A. Your data role does not include a payroll security profile that includes the weekly payroll.**
- B. The weekly payroll has not been enabled for the worker's PSU.
- C. You do not have the Manage Payroll Definition duty role.**
- D. The weekly payroll has not been created in the worker's legislative data group.

**Answer: A,C**

### NEW QUESTION # 73

There are several flows showing on the payroll dashboard that are incomplete. What action should be taken to complete the flow and remove it from showing on the dashboard?

- A. From the Payroll Calculation Work Area, highlight the flow and select the skip all tasks action.
- B. From the Payroll Calculation Work Area, highlight the flow and select the rollback all tasks action.**
- C. From the Payroll Calculation Work Area, highlight the flow and select the delete flow action.

- D. From the Payroll Calculation Work Area, highlight the flow and select the complete flow action.

**Answer: B**

Explanation:

In Oracle Payroll Cloud, incomplete flows on the payroll dashboard indicate that a payroll process (e.g., Calculate Payroll) has not fully completed due to errors or interruptions. To resolve this and remove the flow from the dashboard, the recommended action is to rollback all tasks from the Payroll Calculation Work Area (Option B). Rolling back the tasks reverses the incomplete process, allowing users to address any issues (e.g., data errors) and resubmit the flow. Option A (skip all tasks) does not resolve the underlying issue and leaves the flow incomplete. Option C (complete flow action) is not a valid action for an incomplete flow, as completion requires successful task execution. Option D (delete flow action) is not applicable, as flows cannot be arbitrarily deleted from the dashboard without proper resolution. The rollback action ensures data integrity and is the standard approach per Oracle documentation.

#### NEW QUESTION # 74

You created organization payment methods of type Check and EFT for your customer. However, they inform you that they only want to allow their employees to create personal payment methods of type EFT. Which additional setup step must you also complete?

- A. Create a formula to restrict payment types available to employees and attach it to the payroll user interface configuration user-defined table.
- B. Only attach organization payment methods of type EFT to the employees' payroll.
- C. Disable the payment type field from the personal payment method page.
- D. Create an information element, with an input value to store the payment types available to employees.

**Answer: A**

#### NEW QUESTION # 75

You defined the department costing information after the Calculate Payroll process is run that creates the costing results also. You noticed that the department costing information is not created for the employees who are in that department. What should you do to ensure the department costing information is reflected for those employees without rolling back and rerunning the Calculate Payroll?

- A. You roll back only the costing process and rerun it.
- B. You cannot rectify the costing results after they are created.
- C. You do the adjustments in General Ledger because you cannot do changes in the costing results.
- D. You run the Calculate Retroactive Costing process to recalculate costs for retroactive changes to costing setups.

**Answer: D**

Explanation:

In Oracle Payroll Cloud, if costing setups (e.g., department costing information) are updated after a payroll run, the original costing results won't reflect the new setup. To apply these retroactive changes without rolling back the entire Calculate Payroll process, you should run the Calculate Retroactive Costing process (Option B). This process recalculates costing based on the updated setups and adjusts the results for affected employees, ensuring the department costing is reflected. Option A (rolling back costing only) is not a standalone option; rollback typically applies to the full payroll process. Option C (General Ledger adjustments) is a manual workaround, not the recommended system approach. Option D is incorrect, as retroactive costing is designed for this purpose. Oracle documentation highlights this process for retroactive cost updates.
