# Vce Nutanix NCP-DB-6.10 Files - NCP-DB-6.10 Valid Exam Topics

Practicing the NCP-DB-6.10 exam questions, you actually learn to answer the real NCP-DB-6.10 exam questions. Additionally, you also study time management to solve paper in the given time. Above all, you overcome the fear of the real exam and doing NCP-DB-6.10 Exam Dumps, you gain enough confidence and examination ability that is necessary to pass the tough NCP-DB-6.10 certifications.

An Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) practice questions is a helpful, proven strategy to crack the Nutanix NCP-DB-6.10 exam successfully. It helps candidates to know their weaknesses and overall performance. TestPDF has hundreds of Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam dumps that are useful to practice in real time. The Nutanix NCP-DB-6.10 practice questions have a close resemblance with the actual NCP-DB-6.10 exam.

Nutanix NCP-DB-6.10 Web-Based Practice Exam Software

If you are preparing for NCP-DB-6.10 exam and upset without accurate exam torrent and practice materials, TestPDF guarantees you to pass exam at first attempt absolutely. Our NCP-DB-6.10 exam torrent is edited by latest official examination knowledge. Once official department change questions we will release new version of NCP-DB-6.10 Exam Torrent accordingly. We provide one year free update and service warranty for all products. You will have sufficient time to take part in exams.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q201-Q206):

NEW QUESTION # 201
A database admin logs into Era to manage an Oracle Database VM and sees a message Update Available on the Status of the Software Profile Version.
What should the database admin do?

- A. Schedule Ere to update the software profile to the latest version
- B. Era autocratically updates the software profile to the latest version
- C. Manually update the software profile to the latest version
- D. Create and update to the latest software profile version

Answer: C

Explanation:
In Nutanix Database Automation (NCP-DB), when an administrator logs into Era and sees a message "Update Available" on the

Status of the Software Profile Version, it indicates that a newer version of the software profile is available. The administrator should manually update the software profile to the latest version. This process ensures that the database VM is running the most recent and compatible version of the software.

NEW QUESTION # 202
Which statement describes what the Time Machine Heal function can be used for?

- A. Refreshes a database clone in Time Machine.
- B. Removes gaps in the Time Machine's restore capability.
- C. Patches a Time Machine to the latest NDB levels.
- D. Restores a Time Machine from snapshot in the event of malware.

Answer: B

Explanation:
The Time Machine Heal function in NDB is designed to address inconsistencies or gaps in the Time Machine's restore point chain, ensuring a continuous and reliable recovery history. It identifies and repairs missing log backups or snapshots that may have been skipped due to failures (e.g., network issues or agent errors), thereby removing gaps in the restore capability.
This function does not patch software, refresh clones, or restore from malware but focuses on maintaining the integrity of the Time Machine's data protection timeline.

NEW QUESTION # 203
A database administrator logged into their NDB dashboard notices the Savings over traditional cloning metric in the Data Usage widget.
What does this number represent?

- A. The amount of disk space saved from deduplication
- B. The amount of disk space saved with near-zero byte clones
- C. The amount of disk space saved with shadow clones
- D. The amount of disk space saver from compression

Answer: B

Explanation:
The "Savings over traditional cloning" metric in the Data Usage widget on the NDB dashboard reflects the efficiency of NDB's cloning technology compared to traditional full-copy cloning methods. NDB leverages Nutanix's near-zero byte cloning capability, which creates lightweight clones by sharing base data and only storing changes (deltas). This metric specifically quantifies the disk space saved by using these efficient clones instead of duplicating entire datasets, as would occur in traditional cloning. It highlights NDB's storage optimization for database provisioning and management.

NEW QUESTION # 204
Within NDB, an administrator needs to register a PostgreSQL database server VM with a database. Where should the database data and log files be located in order to successfully complete this task?

- A. On the same mount point
- B. On the same disk as the operating system
- C. On the same disk as the binary installation
- D. On a separate mount point

Answer: D

Explanation:
To register a PostgreSQL database server VM with a database on NDB, the database data and log files must be located on a separate mount point from the operating system and the binary installation.
This is because NDB uses the mount point as the identifier for the database server VM and the database. If the data and log files are on the same mount point as the operating system or the binary installation, NDB will not be able to recognize them as a valid database server VM or database. Therefore, the administrator should create a separate mount point for the data and log files and specify it during the registration process.

NEW QUESTION # 205
What behavior is observed when applying patch profiles as a Super Admin?

- A. Unpublished patches can be applied.
- B. Published patches cannot be applied if currently deprecated.
- C. Hidden patches can be applied.
- D. Deprecated patches can be applied.

Answer: B

Explanation:
In the context of Nutanix Database Automation (NCP-DB), a Super Admin has the authority to apply patch profiles. However, if a patch is marked as deprecated, even if it's published, it cannot be applied. This is because deprecation is a status that indicates the patch is outdated or has been superseded by a newer version, and thus should not be used. This behavior ensures that only the most up-to-date and secure patches are applied to the system, maintaining the integrity and security of the database environment.

NEW QUESTION # 206

......

As far as the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam questions are concerned, these Nutanix NCP-DB-6.10 exam questions are designed and verified by the experience and qualified NCP-DB-6.10 exam trainers. They work together and strive hard to maintain the top standard of NCP-DB-6.10 Exam Practice questions all the time. So you rest assured that with the TestPDF Nutanix NCP-DB-6.10 exam questions you will ace your NCP-DB-6.10 exam preparation and feel confident to solve all questions in the final Nutanix NCP-DB-6.10 exam.
