Plat-Admn-202考證，Plat-Admn-202最新題庫

在現在這個競爭激烈的社會裏，有一技之長是可以占很大優勢的。尤其在IT行業中。獲得一些IT認證證書是非常有用的。Salesforce Plat-Admn-202 是一個檢驗IT專業知識水準認證考試，在IT行業中也是一個分量相當重的認證考試。因為Salesforce Plat-Admn-202考試難度也比較大，所以很多為了通過Salesforce Plat-Admn-202 認證考試的人花費了大量的時間和精力學習考試相關知識，但是到最後卻沒有成功。Fast2test為此分析了他們失敗的原因，我們得出的結論是他們沒有經過針對性的培訓。現在Fast2test的專家們為Salesforce Plat-Admn-202 認證考試研究出了針對性的訓練項目，可以幫你花少量時間和金錢卻可以100%通過考試。

最新的 Salesforce Developer Plat-Admn-202 免費考試真題 (Q254-Q259):

問題 #254

Universal Containers (UC) utilizes two custom picklist fields called sales_Organization__c and Pricing_Tier__c.

Which validation rule should an app builder use to ensure pricing_Tier__c is required for customers with a Sales_Organization__c value of Canada?

- A. ☐
- B. ☐
- C. ☒
- D. ☐

答案： C

問題 #255

Universal Containers wants to track installation information once a container has been purchased on a custom object. Sales reps should have visibility of all the installations associated with their opportunities.

Which kind of relationship should this new object have to Opportunity?

- A. Lookup
- B. Hierarchical
- C. Master-Detail
- D. Many to Many

答案： C

解題說明：

The new custom object ("Installation__c") must store installation details that are related to an Opportunity. Since each installation should be tied directly to a single opportunity, and inherit ownership and visibility from that opportunity (as per "sales reps should have visibility"), a Master-Detail relationship is appropriate.

Why B (Master-Detail) is correct:Exact Extract:"In a master-detail relationship, the detail record inherits the sharing and security settings of its master record." - Salesforce Help | Relationships OverviewBecause Opportunities already have ownership and sharing settings that determine sales reps' visibility, making Installation__c the detail record ensures that sales reps automatically see related installations.Exact Extract:"The master-detail relationship closely links objects so that the master record controls certain behaviors of the detail record, such as record ownership, sharing, and deletion." - Salesforce Help | Master-Detail Relationships Why B (Master-Detail) is correct:Exact Extract:"In a master-detail relationship, the detail record inherits the sharing and security settings of its master record." - Salesforce Help | Relationships OverviewBecause Opportunities already have ownership and sharing settings that determine sales reps' visibility, making Installation__c the detail record ensures that sales reps automatically see related installations.Exact Extract:"The master-detail relationship closely links objects so that the master record controls certain behaviors of the detail record, such as record ownership, sharing, and deletion." - Salesforce Help | Master-Detail Relationships Why not A (Many to Many):Many-to-many relationships are only used when multiple records on both sides need to relate (e.g., Opportunities linked to multiple Installations and vice versa). That is not described here.

Why not C (Hierarchical):Hierarchical relationships are only available on the User object.

Why not D (Lookup):Lookup relationships do not automatically grant visibility or inherit ownership, so sales reps might not see all related installations.

問題 #256

A new app builder on the Cloud Kicks team is getting familiar with the data model. They want to see how standard objects and custom objects relate.

Which functionality should the app builder use to view these relationships?

- A. Schema Builder
- B. Object Manager
- C. Lightning App Builder
- D. Fields & Relationships

答案： A

解題說明：

Schema Builder provides a graphical representation of all standard and custom objects and their field and relationship structure. It's the best tool for visualizing how data objects are interconnected.

Why D (Schema Builder) is correct:Exact Extract:"Schema Builder provides a dynamic environment for viewing and modifying all the

objects and relationships in your organization. You can add new custom objects, fields, and relationships directly in the schema." - Salesforce Help | Schema Builder Overview
Why not A (Fields & Relationships): That section displays fields for a single object only, not overall relationships.

Why not B (Object Manager): The Object Manager allows object configuration but doesn't visually display relationships.

Why not C (Lightning App Builder): That tool is for UI layout, not data model visualization.

問題 #257

Ursa Major Solar (UMS) is planning to hire some new employees. UMS wants to allow a job candidate (Job_Candidate__c) to apply for multiple open positions (Open_Position__c) and then be able to view the applications (Application__c) on the job candidate record. UMS also wants to view all the applications for a specific open position.

- A. Create a master-detail relationship field on Application__c to Job_Candidate__c.
- B. Create a master-detail relationship on Open_Position__c to Application__c.
- C. Create a master-detail relationship field on Application__c to Open_Position__c.
- D. Create a master-detail relationship field on Job_Candidate__c to Application__c.

答案: A,C

解題說明:

UMS wants each Application to connect both to a Job Candidate and an Open Position, where:

One Job Candidate can apply for multiple Open Positions.

One Open Position can receive multiple Applications. This is a many-to-many relationship, which in Salesforce is implemented by using a junction object.

In this case, Application__c serves as the junction object between Job_Candidate__c and Open_Position__c.

Exact Extract:

"To create a many-to-many relationship, create two master-detail relationships on the junction object. Each master-detail relationship links the junction object to one of the objects you want to relate." - Salesforce Help | Create a Many-to-Many Relationship
Step 1: On Application__c, create a Master-Detail relationship to Job_Candidate__c (Answer C).

Step 2: On Application__c, create a Master-Detail relationship to Open_Position__c (Answer D).

This setup allows:

Viewing all Applications related to a given Job Candidate.

Viewing all Applications related to a given Open Position.

Exact Extract:

"A junction object is a custom object with two master-detail relationships, and it is the key to building many-to-many relationships between two objects." - Salesforce Help | Junction Object Concepts Reference (Salesforce Platform App Builder documentation / Study Guide topics):

Salesforce Help | Create a Many-to-Many Relationship

問題 #258

Northern Trail Outfitters uses a custom object to track travel requests. Rangers want to have automatic posts on a record whenever a travel request has been approved.

Which feature should be used to accomplish this?

- A. Feed quick action
- B. Feed tracking
- C. Workflow rule
- D. Auto-response rule

答案: B

解題說明:

To have automatic posts on a record whenever a travel request has been approved, feed tracking should be used. Feed tracking enables field updates to be displayed in the Chatter feed of a record or a user profile. Users can follow records or users to see updates in their own feed. Feed tracking can be enabled for standard or custom objects and selected fields.
