## Hot UiPath-ADPv1 Reliable Exam Camp & Useful Tips to help you pass UiPath UiPath-ADPv1

Up to now, we have business connection with tens of thousands of exam candidates who adore the quality of our UiPath-ADPv1 exam questions. Besides, we try to keep our services brief, specific and courteous with reasonable prices of UiPath-ADPv1 Study Guide. All your questions will be treated and answered fully and promptly. So as long as you contact us to ask for the questions on the UiPath-ADPv1 learning guide, you will get the guidance immediately.

## UiPath (ADPv1) Automation Developer Professional Sample Questions (Q82-Q87):

### NEW QUESTION # 82

A developer needs to design a process using the REFramework. but without Orchestrator Queues. Which Is the correct order of actions the developer needs to do in the Get Transaction Data state in this case?

- A. 1. Remove the Get Transaction Item activity from GetTransactionData workflow.

2. Add a Read Row activity in GetTransactionData workflow to read the data from a local Excel file.
3. Add the logic required to read the data source only one time.
4. Add the logic required to check if all rows/transaction items from the read data have been processed
- **B. 1. Remove the Get Transaction Item activity from GetTransactionData workflow.**  
 2. Add a Read Range activity in GetTransactionData workflow to read the data from a local Excel file.  
 3. Add the logic required to read the data source only one time.  
 4 Add the logic required to retrieve only one row from read data each time  
 5. Add the logic required to check if all rows/transaction items from the read data have been processed.
- C. 1. Remove the Get Transaction Item activity from GetTransactionData workflow  
 2. Add a Read Range activity in GetTransactionData workflow to read the data from a local Excel file.  
 3. Add the logic required to read the data source only one time.  
 4. Add the logic required to retrieve only one row from read data each time.
- D. 1. Remove the Get Transaction Item activity from GetTransactionData workflow.  
 2. Add a Read Row activity in GetTransactionData workflow to read the data from a local Excel file.  
 3. Add the logic required to read the data source only one time.  
 4. Add the logic required to retrieve only one row from read data each time.  
 5. Add the logic required to check if all rows/transaction items from the read data have been processed.

**Answer: B**

Explanation:

- \* The correct order of actions in the Get Transaction Data state is:
- \* Remove the Get Transaction Item activity from the GetTransactionData workflow.
- \* Add a Read Range activity in the GetTransactionData workflow to read the data from a local Excel file.
- \* Add the logic required to read the data source only one time.
- \* Add the logic required to retrieve only one row from read data each time.
- \* Add the logic required to check if all rows/transaction items from the read data have been processed.
- \* This sequence ensures that the data is read once, processed row by row, and checks for completion.

### NEW QUESTION # 83

What specific combination of permissions is required to disable errors from the Error Feed widget on the Monitoring > Jobs page in UiPath Orchestrator Monitoring-7

- A. View On Monitoring and View on Jobs.
- B. Edit on Monitoring and View on Jobs.
- **C. View on Monitoring and Edit on Jobs.**
- D. Edit on Monitoring and Edit on Jobs.

**Answer: C**

Explanation:

The Error Feed widget on the Monitoring > Jobs page in UiPath Orchestrator Monitoring-7 shows the errors that occurred during the execution of jobs in the selected folder1. You can disable errors from the Error Feed widget by clicking the Disable button next to each error1. However, to do this, you need to have the following permissions:

View on Monitoring: This permission allows you to see the content of the Monitoring pages, such as Machines, Processes, Queues, and Jobs2. Without this permission, you cannot access the Monitoring > Jobs page at all.

Edit on Jobs: This permission allows you to perform actions on jobs, such as starting, stopping, resuming, or killing them3. It also allows you to disable errors from the Error Feed widget on the Monitoring > Jobs page1.

Therefore, the correct answer is A. View on Monitoring and Edit on Jobs.

The other options are incorrect because:

Option B is incorrect because it does not include the Edit on Jobs permission, which is required to disable errors from the Error Feed widget.

Option C is incorrect because it includes the Edit on Monitoring permission, which is not required to disable errors from the Error Feed widget. The Edit on Monitoring permission is only required to disable errors from the Error Feed widget on the Monitoring > Queues page4.

Option D is incorrect because it does not include the Edit on Jobs permission, which is required to disable errors from the Error Feed widget.

#### NEW QUESTION # 84

In the context of a UiPath State Machine, what is the primary purpose of the Exit action in a state?

- A. To define the conditions upon which a state transition should occur.
- **B. To execute the final actions of the current state before transitioning to the next stage.**
- C. To revoke any entry actions performed when entering the current state.
- D. To manually stop the state machine's execution.

**Answer: B**

Explanation:

The Exit action in a state is an activity or a sequence of activities that are executed when the state is exited, before the transition to the next state occurs<sup>1</sup>. The purpose of the Exit action is to perform any final actions of the current state, such as closing applications, releasing resources, logging information, etc. The Exit action is executed even if the state transitions back to the same state<sup>2</sup>. Option A is incorrect, because the Exit action does not stop the state machine's execution, but rather prepares the state for the next transition. Option C is incorrect, because the Exit action does not revoke any entry actions, but rather complements them with any necessary exit actions. Option D is incorrect, because the Exit action does not define the conditions for the state transition, but rather executes after the conditions are evaluated.

#### NEW QUESTION # 85

Which of the following is an outcome of converting a personal workspace into a folder in UiPath Orchestrator?

- A. The owner of the initial workspace loses access to the newly created folder and the existing admin users are added by default.
- **B. The owner of the initial workspace is added by default to the newly created folder and assigned the Folder Administrator role.**
- C. The admin user is added by default to the newly created folder with the User Administrator role.
- D. The owner of the initial workspace and the admin user are added by default to the newly created folder and assigned the Personal Workspace Administrator role.

**Answer: B**

Explanation:

The outcome of converting a personal workspace into a folder in UiPath Orchestrator is that the owner of the initial workspace is added by default to the newly created folder and assigned the Folder Administrator role. A personal workspace is a special type of folder that is created automatically for each user in Orchestrator and allows them to work on their own automation projects without affecting other users or folders. A personal workspace can be converted into a regular folder if the user wants to share their work with other users or move it to another folder. When a personal workspace is converted into a folder, the owner of the workspace becomes the owner of the folder and gets the Folder Administrator role, which gives them full permissions to manage the folder and its contents. The folder also inherits the permissions and settings of the parent folder, which is the Default folder by default. The admin user is not added to the folder by default, but they can access the folder as a Tenant Administrator if they have that role.

#### NEW QUESTION # 86

In the context of UiPath Orchestrator, what is the primary purpose of the Monitoring feature?

- A. Handling version control and collaboration among team members.
- **B. Real-time tracking of Robots, Machines, Queues, and Jobs.**
- C. Consolidating event logs and records related to executed tasks and runtime anomalies.
- D. Facilitating the design and deployment of automation workflows.

**Answer: B**

Explanation:

The Monitoring feature in UiPath Orchestrator is a solution that provides real-time metrics to help you keep an eye on the health and state of your system1. It enables you to check the status and performance of your Robots, Machines, Queues, and Jobs in either the last hour or last day1. You can also use the Monitoring feature to filter, sort, and search for specific resources, view detailed information and charts for each resource, and access the Error Feed widget to see the errors that occurred during execution1. The other options are incorrect because:

Option A describes the purpose of the Source Control feature in UiPath Studio, which allows you to manage your automation projects using Git or TFS2.

Option C describes the purpose of the Processes feature in UiPath Orchestrator, which allows you to deploy, configure, and run automation workflows on Robots3.

Option D describes the purpose of the Logs feature in UiPath Orchestrator, which allows you to view and download event logs and records related to executed tasks and runtime anomalies.
