Pass 156-315.81 Exam with Unparalleled 156-315.81 Valid Test Dumps by ExamBoosts

The desktop CheckPoint 156-315.81 exam simulation software works only on Windows, but the web-based CheckPoint 156-315.81 practice exam is compatible with all operating systems. You can take the online CheckPoint 156-315.81 Mock Test without

software installation via Chrome, Opera, Firefox, or another popular browser.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q132-Q137):

NEW QUESTION # 132
NAT rules are prioritized in which order?
1. Automatic Static NAT
2. Automatic Hide NAT
3. Manual/Pre-Automatic NAT
4. Post-Automatic/Manual NAT rules

- A. 4, 3, 1, 2
- B. 3, 1, 2, 4
- C. 1, 2, 3, 4
- D. 1, 4, 2, 3

Answer: C

Explanation:
Explanation
NAT rules are prioritized in the following order:
Automatic Static NAT: This is the highest priority NAT rule and it translates the source or destination IP address to a different IP address without changing the port number. It is configured in the network object properties.
Automatic Hide NAT: This is the second highest priority NAT rule and it translates the source IP address and port number to a different IP address and port number. It is configured in the network object properties.
Manual/Pre-Automatic NAT: This is the third highest priority NAT rule and it allows you to create custom NAT rules that are not possible with automatic NAT. It is configured in the NAT policy rulebase before the automatic NAT rules.
Post-Automatic/Manual NAT rules: This is the lowest priority NAT rule and it allows you to create custom NAT rules that are not possible with automatic NAT. It is configured in the NAT policy rulebase after the automatic NAT rules.

NEW QUESTION # 133
You have used the "set inactivity-timeout 120" command to prevent the session to be disconnected after 10 minutes of inactivity. However, the Web session is being disconnected after 10 minutes. Why?

- A. The number specified is the amount of the idle timeout in seconds rather than in minutes. So you have to use the command "set inactivity-timeout 600" instead.
- B. The number of minutes is correct. Probably, you have forgotten to save this setting with the "save config" command.
- C. Probably, you have forgotten to make sure that nobody is accessing the management server via the SmartConsole which locks the management database.
- D. The idle timeout for the web session is specified with the "set web session-timeout" command.

Answer: D

Explanation:
Explanation
The reason why the web session is being disconnected after 10 minutes is that the idle timeout for the web session is specified with the "set web session-timeout" command, not the "set inactivity-timeout" command.
The "set inactivity-timeout" command only affects the CLI session, not the web session. To prevent the web session from being disconnected after 10 minutes of inactivity, you need to use the "set web session-timeout" command with a higher value than 10 minutes. NEW QUESTION # 134
Which of the following is NOT a valid type of SecureXL template?

- A. NAT Template
- B. Accept Template
- C. Drop Template

- D. Deny template

Answer: D

NEW QUESTION # 135

UserCheck objects in the Application Control and URL Filtering rules allow the gateway to communicate with the users. Which action is not supported in UserCheck objects?

- A. Reject
- B. Inform
- C. Drop
- D. Ask

Answer: A

Explanation:

The action that is not supported in UserCheck objects is Reject. UserCheck objects in the Application Control and URL Filtering rules allow the gateway to communicate with the users and display messages or requests on their browsers. The supported actions in UserCheck objects are Ask, Inform, Block, and Continue. The Ask action prompts the user to confirm or cancel an action. The Inform action notifies the user about an event or a policy. The Block action prevents the user from accessing a resource or performing an action. The Continue action allows the user to access a resource or perform an action after displaying a message. Reference: [UserCheck]

NEW QUESTION # 136

If the Active Security Management Server fails or if it becomes necessary to change the Active to Standby, the following steps must be taken to prevent data loss. Providing the Active Security Management Server is responsive, which if these steps should NOT be performed:

- A. Manually synchronize the Active and Standby Security Management Servers.
- B. Change the Active Security Management Server to Standby.
- C. Rename the hostname of the Standby member to match exactly the hostname of the Active member.
- D. Change the Standby Security Management Server to Active.

Answer: C

Explanation:

The hostname of the Standby member should not be changed to match the hostname of the Active member, as this would cause a conflict in the network. The correct procedure is to change the hostname of the Active member to a different name, and then change the Standby member to the original hostname of the Active member1.
