What's more, part of that PrepAwayExam Analytics-Admn-201 dumps now are free: <https://drive.google.com/open?id=1jikX0IwPehkjP8r24706NjoJQaUVnxEK>

You can save time and clear the Analytics-Admn-201 certification test in one sitting if you skip unnecessary material and focus on our Salesforce Analytics-Admn-201 actual questions. It's time to expand your knowledge and skills if you're committed to pass the Salesforce Analytics-Admn-201 Exam and get the certification badge to advance your profession.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	• Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
Topic 2	• Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.
Topic 3	• Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.
Topic 4	• Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.

Topic 5	• Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.

2026 100% Free Analytics-Admn-201 –High Pass-Rate 100% Free Latest Exam Notes | Valid Exam Analytics-Admn-201 Preparation

Our Analytics-Admn-201 exam questions have three versions: the PDF, Software and APP online. Also, there will have no extra restrictions to your learning because different versions have different merits. All in all, you will not be forced to buy all versions of our Analytics-Admn-201 Study Materials. You have the final right to select. Please consider our Analytics-Admn-201 learning quiz carefully and you will get a beautiful future with its help.

Salesforce Certified Tableau Server Administrator Sample Questions (Q13-Q18):

NEW QUESTION # 13

Which two commands are valid and complete commands? (Choose two.)

- A. tsm maintenance cleanup
- B. tsm maintenance ziplogs
- C. tsm maintenance restore
- D. tsm maintenance backup

Answer: A,B

Explanation:

TSM commands manage Tableau Server maintenance--let's validate their syntax:

Command Requirements:

Some need arguments (e.g., file paths); others are standalone.

Valid and Complete: Must work as-is without errors.

Option C (tsm maintenance cleanup): Correct.

Details: Removes temporary files and old logs--no arguments required (optional flags like -l exist).

Use: tsm maintenance cleanup--runs fully.

Option D (tsm maintenance ziplogs): Correct.

Details: Creates a zip of logs (e.g., tsm-logs.zip)--no arguments needed (optional -d for date range).

Use: tsm maintenance ziplogs--complete and valid.

NEW QUESTION # 14

Which three types of data should you backup to ensure that you can restore a Tableau Server?

(Choose three.)

- A. Server secrets and Repository passwords
- B. Topology data
- C. Configuration data
- D. Repository data

Answer: A,C,D

Explanation:

Backing up Tableau Server ensures recovery from failures or migrations. A full backup includes multiple data types--let's dissect this

comprehensively:

Backup Components:

Repository Data: PostgreSQL database with metadata (users, permissions, workbooks). Backed up via tsm maintenance backup -f <filename>.tsbak.

Configuration Data: Server settings (e.g., ports, authentication) also in the .tsbak file. Server Secrets: Encryption keys, internal tokens, Repository passwords--critical for restoring functionality.

Extracts: .hyper files in File Store (optional, separate backup).

Option A (Server secrets and Repository passwords): Correct. Details: Includes encryption keys (for extracts), internal tokens (process communication), and Repository credentials. Backed up separately or stored securely (e.g., tsm security export-keys).

Why Critical: Without these, restored data may be inaccessible or services may fail.

Option C (Configuration data): Correct.

Details: Ports, authentication settings, process topology--part of the .tsbak file. Why Critical:

Restores server behavior and connectivity post-recovery.

Option D (Repository data): Correct.

Details: Core metadata database--also in .tsbak.

Why Critical: Without it, all content and user data is lost.

NEW QUESTION # 15

Which two tasks always require a server administrator? (Choose two.)

- A. Creating a schedule
- B. Adding users
- C. Adding a site
- D. Locking project permissions

Answer: B,C

Explanation:

In Tableau Server, roles and permissions dictate who can perform specific administrative tasks. A

"server administrator" has full control over the entire Tableau Server deployment, while site administrators manage specific sites.

Some tasks are restricted to server administrators due to their server-wide impact.

Option B (Adding a site): Creating a new site in a multi-site Tableau Server environment is a server-level task that only a server administrator can perform. Sites are logical partitions within the server, and adding a site affects the overall server structure. Site administrators cannot create new sites; they can only manage existing ones.

Option D (Adding users): Adding users to Tableau Server (e.g., via the TSM interface or tabcmd) is a server administrator task when it involves adding users at the server level or assigning them to the default site. While site administrators can add users to their specific site in a multi-site environment, the initial addition of users to the server requires server administrator privileges.

The question's phrasing ("always require") suggests a server-wide context, making this a correct choice.

NEW QUESTION # 16

Which of the following is true regarding Tableau Server's default site?

- A. It can be renamed but not deleted
- B. It can be deleted if another site is set as default
- C. All server administrators must use only the default site
- D. It cannot be deleted or renamed

Answer: A

Explanation:

The Default site is created automatically during installation and cannot be deleted, though its name can be changed. This is unlike additional sites, which administrators can freely create, rename, or delete.

NEW QUESTION # 17

To which site role can you associate the Viewer user-based license level?

- A. Explorer (can publish)

- B. Viewer
- C. Explorer
- D. Creator

Answer: B

Explanation:

Tableau Server uses a role-based licensing model with three primary license levels: Creator, Explorer, and Viewer. Each license level corresponds to specific site roles that define what users can do on the server.

Viewer License: This is the most restrictive license, allowing users to view and interact with published content (e.g., dashboards and visualizations) but not to create or publish new content.

Site Role: The Viewer license can only be associated with the Viewer site role. This role restricts users to viewing capabilities, aligning with the license's purpose.

Option C (Viewer): Correct. The Viewer site role matches the Viewer license level perfectly.

NEW QUESTION # 18

.....

Our company is a well-known multinational company, has its own complete sales system and after-sales service worldwide. In the same trade at the same time, our Analytics-Admn-201 study materials has become a critically acclaimed enterprise, so, if you are preparing for the exam qualification and obtain the corresponding certificate, so our company launched Analytics-Admn-201 Learning Materials is the most reliable choice of you. The service tenet of our company and all the staff work mission is: through constant innovation and providing the best quality service, make the Analytics-Admn-201 study materials become the best customers electronic test study materials.
