Fortinet FCSS_EFW_AD-7.4 認定試験の出題範囲:

トピック	出題範囲
トピック 1	Security Profiles: This section of the exam measures the skills of Network Security Engineers and focuses on managing security inspection profiles, including SSL and SSH inspections. Candidates will learn to apply a combination of web filtering, application control, and Internet Service Database (ISDB) to enhance network security. The section also covers integrating Intrusion Prevention Systems (IPS) to monitor and mitigate threats within enterprise networks.
トピック 2	Routing: This section of the exam measures the skills of Security Administrators and covers the implementation of advanced routing protocols to manage enterprise traffic effectively. Candidates will gain expertise in configuring Open Shortest Path First (OSPF) for dynamic routing and Border Gateway Protocol (BGP) to facilitate communication between different networks, ensuring efficient traffic flow across enterprise environments.
トピック 3	Central Management: This section of the exam measures the skills of Security Administrators and focuses on implementing central management for Fortinet security solutions. It includes configuring and managing devices centrally to streamline network security operations. Candidates will understand how to maintain consistency in security policies and automate deployments for efficient management of large-scale enterprise environments.

トピック 4	• System Configuration: This section of the exam measures the skills of Network Security Engineers and covers the implementation of the Fortinet Security Fabric, ensuring seamless integration across security solutions. It also includes configuring hardware acceleration on FortiGate devices to optimize performance. Candidates will learn to set up different operation modes for high-availability clusters and implement enterprise networks using VLANs and VDOMs. Additionally, it covers various use case scenarios that demonstrate how Fortinet solutions contribute to secure network environments.
トピック 5	• VPN: This section of the exam measures the skills of Network Security Engineers and covers the implementation of secure communication tunnels for enterprise environments. Candidates will learn to configure IPsec VPN with IKE version 2 to establish encrypted connections. The section also includes the implementation of ADVPN to enable on-demand VPN tunnels between different sites, ensuring secure and dynamic connectivity.

社会に入った後の私達は最もの責任があって、学習の時間は少なくなりました。IT領域により良く発展したいなら、Fortinet FCSS_EFW_AD-7.4のような試験認定資格を取得するのは重要なことです。周知のようにFortinet FCSS_EFW_AD-7.4のような試験認定資格を手に入れると、会社の規則に沿う奨励があります。それで、速く我々MogiExamのFortinet FCSS_EFW_AD-7.4試験問題集を入手しましょう。

Fortinet FCSS - Enterprise Firewall 7.4 Administrator 認定 FCSS_EFW_AD-7.4 試験問題 (Q57-Q62):

質問 # 57

Examine these partial outputs from two routing debug commands:

```
# get router info routing-table database
```

```
S 0.0.0.0/0 [20/0] via 100.64.2.254, port2, [10/0]
```

```
S *> 0.0.0.0/0 [10/0] via 100.64.1.254, port1
```

```
# get router info routing-table all
```

```
S* 0.0.0.0/0 [10/0] via 100.64.1.254, port1
```

Why is the default route that uses port2 not in the output of the second command?

- A. It has a higher distance than the default route using port1.
- B. It is disabled in the FortiGate configuration.
- C. It has a higher priority than the default route using port1.
- D. There can be only one default route present in an active routing table.

正解: A

質問 # 58

An administrator has enabled HA session synchronization in a HA cluster with two members.

Which flag is added to a primary unit's session to indicate that it has been synchronized to the secondary unit?

- A. synced
- B. redir.
- C. dirty.
- D. nds.

正解: A

質問 # 59

What action can be taken on a FortiGate to block traffic using IPS protocol decoders, focusing on network transmission patterns and application signatures?

- A. Use the DNS filter to block application signatures and protocol decoders.
- **B. Use application control to limit non-URL-based software handling.**
- C. Configure a web filter profile in flow mode.
- D. Enable application detection-based SD-WAN rules.

正解: B

解説:

FortiGate's IPS protocol decoders analyze network transmission patterns and application signatures to identify and block malicious traffic. Application Control is the feature that allows FortiGate to detect, classify, and block applications based on their behavior and signatures, even when they do not rely on traditional URLs.

Application Control works alongside IPS protocol decoders to inspect packet payloads and enforce security policies based on recognized application behaviors.

It enables granular control over non-URL-based applications such as P2P traffic, VoIP, messaging apps, and other non-web-based protocols that IPS can identify through protocol decoders.

IPS and Application Control together can detect evasive or encrypted applications that might bypass traditional firewall rules.

質問 # 60

Refer to the exhibit, which contains a partial VPN configuration.

```
config vpn ipsec phase1-interface
edit tunnel
set type dynamic
set interface "port1"
set ike-version 2
set keylife 28800
set peertype any
set net-device disable
set proposal aes128-sha256 aes256-sha256
set dpd on-idle
set add-route enable
set psksecret fortinet
next
end
```

What can you conclude from this VPN IPsec phase 1 configuration?

- **A. This configuration is the best for networks with regular traffic intervals, providing a balance between connectivity assurance and resource utilization.**
- B. Peer IDs are unencrypted and exposed, creating a security risk.
- C. A separate interface is created for each dial-up tunnel, which can be slower and more resource intensive, especially in large networks.
- D. FortiGate will not add a route to its routing or forwarding information base when the dynamic tunnel is negotiated.

正解: A

解説:

This IPsec Phase 1 configuration defines a dynamic VPN tunnel that can accept connections from multiple peers. The settings chosen here suggest a configuration optimized for networks with intermittent traffic patterns while ensuring resources are used efficiently.

Key configurations and their impact:

#set type dynamic# This allows multiple peers to establish connections dynamically without needing predefined IP addresses.

#set ike-version 2# Uses IKEv2, which is more efficient and supports features like EAP authentication and reduced rekeying overhead.

#set dpd on-idle# Dead Peer Detection (DPD) is triggered only when the tunnel is idle, reducing unnecessary keep-alive packets and improving resource utilization.

#set add-route enable# FortiGate automatically adds the route to the routing table when the tunnel is established, ensuring

connectivity when needed.

#set proposal aes128-sha256 aes256-sha256# Uses strong encryption and hashing algorithms, ensuring a secure connection.

#set keylife 28800# Sets longer key lifetime(8 hours), reducing the frequency of rekeying, which is beneficial for stable connections. Because DPD is set to on-idle, the tunnel will not constantly send keep-alive messages but will still ensure connectivity when traffic is detected. This makes the configuration ideal for networks with regular but non- continuous traffic, balancing security and resource efficiency.

質問 # 61

A FortiGate device has the following LDAP configuration:

```
config user ldap
  edit "WindowsLDAP"
    set server "10.0.1.10"
    set cnid "cn"
    set dn "cn=Users, dc=trainingAD, dc=training, dc=lab"
    set type regular
    set username "dc=trainingAD, dc=training, dc=lab"
    set password xxxxxxxx
  next
end
```

The administrator executed the 'dsquery' command in the Windows LDAP server 10.0.1.10, and got the following output:

```
>dsquery user -samid administrator
```

```
"CN-Administrator, CN-Users, DC=trainingAD, DC=training, DC=lab"
```

Based on the output, what FortiGate LDAP setting is configured incorrectly?

- A. password.
- **B. username.**
- C. dn.
- D. cnid.

正解: B
