

# New C-ABAPD-2507 Mock Test, Answers C-ABAPD-2507 Real Questions

P.S. Free & New C-ABAPD-2507 dumps are available on Google Drive shared by Itcertking: [https://drive.google.com/open?id=1LEXHdjwysVC3rDrwwL4CMPyocZAUr\\_y](https://drive.google.com/open?id=1LEXHdjwysVC3rDrwwL4CMPyocZAUr_y)

Buying our C-ABAPD-2507 study materials can help you pass the test easily and successfully. We provide the C-ABAPD-2507 learning braindumps which are easy to be mastered, professional expert team and first-rate service to make you get an easy and efficient learning and preparation for the C-ABAPD-2507 test. If you study with our C-ABAPD-2507 exam questions for 20 to 30 hours, you will be bound to pass the exam smoothly. So what are you waiting for? Just come and buy our C-ABAPD-2507 practice guide!

Solutions is commented SAP to ace your C-ABAPD-2507 preparation and enable you to pass the final SAP C-ABAPD-2507 with flying colors. To achieve this objective Exams. Solutions is offering updated, real, and error-free C-ABAPD-2507 Exam Questions in three easy-to-use and compatible formats. These C-ABAPD-2507 questions formats will help you in preparation.

## Answers C-ABAPD-2507 Real Questions & Reliable C-ABAPD-2507 Test Question

The Itcertking guarantees their customers that if they have prepared with SAP C-ABAPD-2507 practice test, they can pass the SAP C-ABAPD-2507 certification easily. If the applicants fail to do it, they can claim their payment back according to the terms and conditions. Many candidates have prepared from the actual SAP C-ABAPD-2507 Practice Questions and rated them as the best to study for the examination and pass it in a single try with the best score.

### SAP Certified Associate - Back-End Developer - ABAP Cloud Sample Questions (Q27-Q32):

#### NEW QUESTION # 27

Which of the following are parts of the definition of a new database table? Note: There are 2 correct answers to this question.

- A. Extension
- B. Semantic table attributes
- C. Partitioning attributes
- D. Field list

Answer: B,D

#### NEW QUESTION # 28

Given this code,

```

INTERFACE if1.
METHODS m1.
ENDINTERFACE.
CLASS c1 DEFINITION.
PUBLIC SECTION.
INTERFACES if1.
METHODS m2.
ENDCLASS.
" in a method of another class
DATA go_if1 TYPE REF TO if1.
DATA go_c1 TYPE REF TO c1.
go_c1 = NEW #( ... ).
go_if1 = go_c1.

```

What are valid statements? (Select 3 correct answers)

- A. `go_c1` may call method `m1` with `go_c1->if1~m1( ... )`.
- B. Instead of `go_c1 = NEW #( ... )` you could use `go_if1 = NEW #( ... )`.
- C. Instead of `go_c1 = NEW #( ... )` you could use `go_if1 = NEW c1( ... )`.
- D. `go_if1` may call method `m2` with `go_if1->m2( ... )`.
- E. `go_if1` may call method `m1` with `go_if1->m1( ... )`.

**Answer: A,C,E**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

\* An interface reference (`go_if1`) can point to any object of a class that implements that interface.

Therefore, creating an instance with `NEW c1( ... )` and directly assigning it to the interface-typed variable is valid (A).

\* Type inference with `NEW #( ... )` cannot infer a class from an interface-typed target (no unique implementing class), so (B) is invalid.

\* An interface reference exposes only the interface's methods; it cannot call class-specific methods (so (C) is invalid).

\* Calling interface method `m1` via the interface reference is valid (D).

\* From the class reference, the interface method can be called (implicitly or explicitly qualified) as `go_c1->if1~m1( ... )` (E).

This reflects ABAP OO rules in ABAP Cloud (method visibility via static type, interface implementation, and explicit interface method calls).

Study Guide Reference: ABAP Objects-Interfaces & Class Constructors; ABAP Cloud Back-End Developer-OO fundamentals.

### NEW QUESTION # 29

In ABAP SQL, which of the following retrieves the association field `_Airline-Name` of a CDS view?

- A. `"_Airline Name`
- B. `@_Airline-Name`
- C. `\_Airline-Name`
- D. `/_Airline Name`

**Answer: B**

Explanation:

In ABAP SQL, the syntax to retrieve the association field of a CDS view is to use the `@` sign followed by the association name and the field name, separated by a period sign (`.`). For example, to retrieve the association field `_Airline-Name` of a CDS view, the syntax is `@_Airline.Name`. This syntax allows the access to the fields of the target data source of the association without explicitly joining the data sources. The other options are incorrect because they use the wrong symbols or formats to access the association field.

### NEW QUESTION # 30

Which language is used to add or change data of a business object in RESTful Application Programming?

- A. Data modification language
- B. Data manipulation language
- C. RAP editing language

- D. Entity manipulation language

**Answer: B**

### NEW QUESTION # 31

Exhibit:

What are valid statements? Note: There are 3 correct answers to this question.

- A. `go_ifl` may call method `m1` with `go_ifl->m1()`.
- B. Instead of `go_cll = NEW #()` you could use `go_ifl = NEW #(...)`.
- C. Instead of `go_cll = NEW #(...)` you could use `go_ifl = NEW cll(. ... )`.
- D. `go_cll` may call method `m1` with `go_cll->ifl-m1()`.
- E. `go_ifl` may call method `m2` with `go_ifl->m2(...)`.

**Answer: A,C,E**

Explanation:

The following are the explanations for each statement:

A: This statement is valid. `go_ifl` may call method `m1` with `go_ifl->m1()`. This is because `go_ifl` is a data object of type REF TO ifl, which is a reference to the interface ifl. The interface ifl defines a method `m1`, which can be called using the reference variable `go_ifl`. The class `c11` implements the interface ifl, which means that it provides an implementation of the method `m1`. The data object `go_ifl` is assigned to a new instance of the class `c11` using the NEW operator and the inline declaration operator @DATA. Therefore, when `go_ifl->m1()` is called, the implementation of the method `m1` in the class `c11` is executed.  
 B: This statement is valid. Instead of `go_cll = NEW #(...)` you could use `go_ifl = NEW cll(...)`. This is because `go_ifl` is a data object of type REF TO ifl, which is a reference to the interface ifl. The class `c11` implements the interface ifl, which means that it is compatible with the interface ifl. Therefore, `go_ifl` can be assigned to a new instance of the class `c11` using the NEW operator and the class name `c11`. The inline declaration operator @DATA is optional in this case, as `go_ifl` is already declared. The parentheses after the class name `c11` can be used to pass parameters to the constructor of the class `c11`, if any.  
 E: This statement is valid. `go_ifl` may call method `m2` with `go_ifl->m2(...)`. This is because `go_ifl` is a data object of type REF TO ifl, which is a reference to the interface ifl. The class `c11` implements the interface ifl, which means that it inherits all the components of the interface ifl. The class `c11` also defines a method `m2`, which is a public method of the class `c11`. Therefore, `go_ifl` can call the method `m2` using the reference variable `go_ifl`. The method `m2` is not defined in the interface ifl, but it is accessible through the interface ifl, as the interface ifl is implemented by the class `c11`. The parentheses after the method name `m2` can be used to pass parameters to the method `m2`, if any.  
 The other statements are not valid, as they have syntax errors or logical errors. These statements are:

C: This statement is not valid. `go_cll` may call method `m1` with `go_cll->ifl~m1()`. This is because `go_cll` is a data object of type REF TO c11, which is a reference to the class `c11`. The class `c11` implements the interface ifl, which means that it inherits all the components of the interface ifl. The interface ifl defines a method `m1`, which can be called using the reference variable `go_cll`. However, the syntax for calling an interface method using a class reference is `go_cll->m1()`, not `go_cll->ifl~m1()`. The interface component selector `~` is only used when calling an interface method using an interface reference, such as `go_ifl->ifl~m1()`. Using the interface component selector `~` with a class reference will cause a syntax error.  
 D: This statement is not valid. Instead of `go_cll = NEW #()` you could use `go_ifl = NEW #(...)`. This is because `go_ifl` is a data object of type REF TO ifl, which is a reference to the interface ifl. The interface ifl cannot be instantiated, as it does not have an implementation. Therefore, `go_ifl` cannot be assigned to a new instance of the interface ifl using the NEW operator and the inline declaration operator @DATA. This will cause a syntax error or a runtime error. To instantiate an interface, you need to use a class that implements the interface, such as the class `c11`.

### NEW QUESTION # 32

.....

In today's era, knowledge is becoming more and more important, and talents are becoming increasingly saturated. In such a tough situation, how can we highlight our advantages? It may be a good way to get the test C-ABAPD-2507 certification. In fact, we always will unconsciously score of high and low to measure a person's level of strength, believe that we have experienced as a child by elders inquire achievement feeling, now, we still need to face the fact. Our society needs all kinds of comprehensive talents, the C-ABAPD-2507 Study Materials can give you what you want, but not just some boring book knowledge, but flexible use of combination with the social practice.
