初心者でも経験豊富な人でも、Tech4Exam学習教材は、長年にわたる試験概要の変化と業界の傾向に基づいて編集された専門家にとって最適な選択です。C_SIGVT_2506テストトレントは、学習の効率を向上させるのに役立つだけでなく、レビュー時間を最大数か月から1か月、さらには2週間または3週間に短縮するのに役立ちます。最大の改善を得る。そして、C_SIGVT_2506試験問題により、SAP、あなたのSAP Certified Associate - Validating Business Transformation成功が保証されます。

SAP C_SIGVT_2506 認定試験の出題範囲：

トピック	出題範囲
トピック 1	Using LeanIX for Enterprise Architecture Validation: This section of the exam measures the abilities of Enterprise Architects and focuses on using LeanIX to validate architecture landscapes. It includes understanding how LeanIX maps applications, data, and business capabilities to support modernization efforts. The domain emphasizes validating architecture readiness and ensuring that the existing IT landscape aligns with transformation goals.
トピック 2	Exploring SAP Cloud Strategy: This section of the exam measures the skills of Cloud Strategy Analysts and focuses on SAP overall cloud vision, deployment models, and strategic direction. It includes understanding the value of cloud adoption, SAP portfolio of cloud solutions, and how organizations benefit from modern cloud architectures. The section validates foundational knowledge of SAP cloud ecosystem and its relevance to transformation.
トピック 3	Exploring the SAP Business Transformation Methodology: This section of the exam measures the skills of Transformation Consultants and introduces SAP structured methodology for guiding organizations through transformation programs. It covers the stages, principles, and frameworks used to support business evolution, ensuring candidates understand how SAP's methodology enables structured planning, execution, and adoption across transformation lifecycles.
トピック 4	Monitoring Transformation Progress using SAP Cloud ALM: This section of the exam measures the capabilities of Cloud ALM Specialists and covers the use of SAP Cloud ALM to track project progress and operational performance. It explains how Cloud ALM supports implementation tasks, monitors system health, and provides visibility into key milestones. Candidates learn how to use the platform to support continuous governance and ensure transformation activities remain on track.

トピック 5	Validating Business Processes with SAP Signavio: This section of the exam measures the skills of Business Process Analysts and covers the use of SAP Signavio to evaluate, analyze, and validate business processes during transformation projects. It focuses on understanding how process insights support decision-making and how Signavio helps identify gaps between current operations and desired outcomes. The section ensures candidates can apply Signavio tools to support business process optimization.

C_SIGVT_2506学習ガイドを選択することは、学習コンテンツの充実だけでなく、独自の発見スペースを改善する機会でもあります。当社のC_SIGVT_2506学習ガイド資料は、あなたの個人的な開発に大きな影響を与える可能性があります。仕事を探している過程で、競合他社よりも有利なC_SIGVT_2506証明書を保持しているため、君は。C_SIGVT_2506学習ガイド資料を使用した後、ユーザーは専攻に専念するためにより多くの時間とエネルギーを費やすことができ、専門分野でますます目立つようになります。

SAP Certified Associate - Validating Business Transformation 認定 C_SIGVT_2506 試験問題 (Q14-Q19):

質問 # 14

What is the significance of data privacy compliance in a clean core strategy?

- A. It eliminates the need for data archiving
- B. It focuses on data duplication
- C. It allows unrestricted access to all data
- **D. It ensures data is stored and processed only for justifiable purposes**

正解: D

解説:

Data privacy compliance is an essential element of SAP's clean core strategy because it ensures that an organization manages data responsibly and in accordance with legal and regulatory requirements. In a clean core environment, systems must support standardized handling of personal, sensitive, and business-critical data. This includes ensuring that data is collected, stored, accessed, and processed only for valid business purposes that comply with regulations such as GDPR or local data protection laws. Maintaining proper data privacy also reduces risk during upgrades and transformations. Clean core principles emphasize minimizing custom data handling logic, which reduces the chances of unauthorized access or non-compliant processing. By adhering to standardized data frameworks and extension patterns, organizations limit the potential for data misuse and maintain clear control over data lineage and retention policies.

Options A and D contradict privacy best practices-unrestricted access and eliminating archiving would create major compliance issues. Option C addresses operational concerns but is unrelated to privacy.

Therefore, the correct significance is that data privacy compliance ensures data is processed lawfully, purposefully, and responsibly within a clean core ecosystem.

質問 # 15

What is the primary purpose of the Application Landscape Report in SAP LeanIX?

- A. Visualize data flow between systems
- **B. Identify active applications affected by the transformation**
- **C. Understand integration dependencies and their current status**
- D. Understand application data quality

正解: B、C

解説:

The Application Landscape Report in SAP LeanIX provides a consolidated view of all applications within the IT environment. It highlights which applications are active, which are impacted by transformation plans, and how they align with business capabilities. Additionally, it displays integration dependencies, helping stakeholders understand the connections between applications and the interfaces that may be influenced by change. While other reports focus on data quality or specialized views, this report centers on active applications and key integration relationships.

質問 # 16

What tool is used for test automation within SAP Cloud ALM projects?

- A. SAP WalkMe
- B. SAP Enable Now
- C. Tricentis
- D. SAP Business Data Cloud

正解: C

解説:

Tricentis Test Automation is directly integrated with SAP Cloud ALM to support automated testing. It provides codeless test creation, execution, and reporting for SAP and non-SAP processes. Within Cloud ALM, Tricentis handles automated regression scenarios, ensuring system stability during configuration changes and release cycles. Other tools listed focus on data management or end-user enablement, not automated testing.

質問 # 17

What tool is used for test automation within SAP Cloud ALM projects?

- A. SAP Enable Now
- B. SAP Walk Me
- C. Tricentis
- D. SAP Business Data Cloud

正解: C

質問 # 18

What are the benefits offered by SAP Cloud ALM for businesses?

(3 correct answers)

- A. It supports process mining with plug & gain
- B. It is available to all customers with Enterprise Support Agreement or cloud contract
- C. It is instantly available for use as a subscription service
- D. It supports only cloud implementation scenarios
- E. It reduces TCO of the solution landscape

正解: B、C、E

解説:

SAP Cloud ALM provides multiple operational and implementation benefits to businesses undergoing transformation. First, it is available to all customers who hold an SAP Enterprise Support Agreement or cloud subscription. This means there are no additional licensing fees, making Cloud ALM a highly accessible lifecycle management platform. Its broad availability encourages consistent adoption across organizations of all sizes.

Second, SAP Cloud ALM is instantly available as a cloud-native subscription service. There is no installation or infrastructure setup required. Customers can begin using Cloud ALM almost immediately after provisioning, accelerating project kickoff and reducing administrative overhead.

Third, one of its major benefits is that it reduces total cost of ownership (TCO) by minimizing on-premise infrastructure requirements and providing standardized, automated tools for monitoring, implementation, testing, and operations. This reduces the need for multiple separate ALM systems and allows customers to centralize lifecycle activities.

Option A is incorrect because process mining with Plug & Gain is a Signavio capability. Option D is incorrect because Cloud ALM supports both cloud and hybrid/on-premise scenarios through integration monitoring and operational support. Therefore, the correct benefits are B, C, and E.
