L4M7 Exam Questions are Available in 3 Easy-to-Understand Formats

Our L4M7 learning materials will aim at helping every people fight for the L4M7 certificate and help develop new skills. If we want

to survive in this competitive world, we need a comprehensive development plan to adapt to the requirement of modern enterprises. We sincerely recommend our L4M7 Preparation exam for our years' dedication and quality assurance will give you a helping hand. You can just free download the free demo of our L4M7 study materials to know how excellent our L4M7 exam questions are.

CIPS Whole Life Asset Management Sample Questions (Q231-Q236):

NEW QUESTION # 231

The optimum balance in the standard ISO 18602:2013 (Packaging and the environment - Optimization of the packaging system) considers which of the following factors?

1. Environmental impact of losses due to lack of packaging
2. The process for packaging design, including material selection
3. Procedures and requirements for packaging that are suitable for organic recycling
4. Environmental impact of excess packaging

- A. 2 and 4 only
- B. 1 and 3 only
- C. 1 and 4 only
- D. 2 and 3 only

Answer: C

Explanation:

ISO 18602:2013 is about Packaging and the environment - Optimization of the packaging system. ISO 18602:2013 specifies requirements and a procedure for assessment of packaging to ensure that the weight or volume of its material content is optimized consistent with the functions of packaging. This is one of several options for reducing the impact of packaging on the environment.

It also provides methodologies and procedures for

- determining the amount and minimization of substances or mixtures hazardous to the environment, and
- determining the amount of four heavy metals (lead, cadmium, mercury, hexavalent chromium) in packaging.

The optimum balance in this standard weighs the environmental impact of losses that may happen with no packaging or inadequate packaging against the environmental impact from excess packaging.

The process for packaging design, including material selection, is not part of ISO 18602:2013.

The procedure for applying ISO 18602:2013 is contained in ISO 18601.

NEW QUESTION # 232

For which of the following is the 'delphi method' used?

- A. Valuing stock
- B. Forecasting demand
- C. Classifying products
- D. Controlling products

Answer: B

Explanation:

Delphi method is a structured forecasting technique using a panel of experts and a number of rounds of questioning. Responses are shared after each round and the experts encouraged to reconsider their own responses. It is intended to achieve a consensus view.

NEW QUESTION # 233

Which of the following are typical characteristics of 2D barcodes? Select TWO that apply.

- A. 2D barcodes are exclusively used for marketing purpose
- B. The 2D barcodes are machine-readable
- C. Every 2D barcodes must conform international standards
- D. 2D barcodes can contain more data than 1D barcodes
- E. 2D barcodes can be read by linear scanners

Answer: B,D

Explanation:

Two-dimensional (2D) barcodes look like squares or rectangles that contain many small, individual dots. This has many different types (i.e. Data matrix, QR codes, Aztec code,...) and several different standards in use (i.e. GS1 standards, ISO/IEC 18004:2015). It can be substituted for 1D barcode, but it has the capability to hold a larger amount of data. For examples, GS1 Data Matrix can contain 3116 Numeric characters or 2335 Alphanumeric characters while GS1-128 barcode has maximum capacity of 48 characters.

Like 1D barcodes, 2D barcodes are also machine-readable with dots/squares and spaces. They have symbology like this:

Since the code is two dimensional, conventional laser scanner can't read it. 2D barcodes require imaging scanner to read.

2D barcodes can be also used for different purposes throughout the supply chain: identifying products/SKU (single unit, packaged or pallet), identifying content of a purchase order or delivery, identifying the batch number from which the item originates, identifying the manufacturer, country of origin etc, tracking status of an order, shipment or delivery Reference:

NEW QUESTION # 234

Long-term forecasting of demand using a subjective method is based on a...

- A. Quantitative, explicit, statistical, or formal method
- **B. Qualitative, informal, experience-based, or intuitive method**
- C. Method of calculating the price in detail within the supply chain
- D. Predicted cash flow forecast levels used by the organisation

Answer: B

NEW QUESTION # 235

Reservoir Inc runs several oil refineries across the country. These refineries require heavy investment, particularly in maintenance, repair and operating (MRO) inventory. But the inventory turnover rate of these MRO items are low, while some items have expired date, which increases the risks of obsolescence. Which of the following methods can address the issues of these MRO items?

- A. Just in case
- **B. Vendor-owned stock**
- C. Larger safety stock
- D. Forrester effect

Answer: B

Explanation:

Where stock turn (inventory turnover) is low and there are potential risks of redundancy or obsolescence, the buying organisation may adopt vendor owned stock. In this system, a supplier (vendor) maintains a stock of items ready to be used at the point of customer consumption. The supplier owns the stock until it is used by the purchaser; only then is the purchaser invoiced for it.

Just in case and larger safety stock would significantly increase the stock level, which may cause redundancy or obsolescence.

Forrester effect (or Bullwhip effect) is a distribution channel phenomenon in which forecasts yield supply chain inefficiencies. It refers to increasing swings in inventory in response to shifts in customer demand as one moves further up the supply chain.
