We have considered that your time may be very tight, and you can only use some fragmented time to learn. Therefore, it is really important to be able to read our 1Z0-902 study materials anytime, anywhere. So we have developed our 1Z0-902 exam questions to three different versions: the PDF, Software and APP online. They have covered all conditions that you will be in to study on our 1Z0-902 learning guide. For example, the time you want to study on phone, computer, laptop, paper and so on.

Oracle 1Z0-902 Exam Overview:

Certification Vendor:	Oracle
Exam Name:	Oracle Exadata Database Machine X8M Implementation Essentials
Exam Number:	1Z0-902
Certificate Validity Period:	2 years
Exam Format:	Multiple Choice, Multiple Response
Related Certifications:	Oracle Exadata Database Machine Implementation Specialist Oracle Database Machine Administration Oracle Exadata X8M Architecture
Exam Price:	\$245 USD
Available Languages:	English
Passing Score:	65%
Exam Duration:	120 minutes
Real Exam Qty:	60-90
Recommended Training:	Oracle Exadata Training Courses Oracle Exadata Documentation
Exam Registration:	Oracle Certification Portal
Sample Questions:	Oracle 1Z0-902 Sample Questions
Exam Way:	Proctored online or authorized test center
Pre Condition:	Oracle Database administration knowledge recommended; basic Linux and networking understanding required.
Official Syllabus URL:	https://education.oracle.com

Free PDF Quiz Oracle - Trustable 1Z0-902 Test Dates

The 1Z0-902 mock tests are specially built for you to evaluate what you have studied. These Oracle Exadata Database Machine X8M Implementation Essentials (1Z0-902) practice exams (desktop and web-based) are customizable, which means that you can change the time and questions according to your needs. Our 1Z0-902 Practice Tests teach you time management so you can pass

the Oracle Exadata Database Machine X8M Implementation Essentials (1Z0-902) certification exam.

Oracle Exadata Database Machine X8M is an advanced database system that offers optimal performance and scalability. It helps organizations streamline their database operations and offers high-performing infrastructure with secure cloud capabilities. To ensure that one is proficient in Exadata implementation, the Oracle 1Z0-902 (Oracle Exadata Database Machine X8M Implementation Essentials) exam was introduced.

Oracle Exadata Database Machine X8M Implementation Essentials Sample Questions (Q57-Q62):

NEW QUESTION # 57

You have been notified by your Network Administrator that an upstream switch has been replaced due to a hardware fault. Which command verifies that the client network on your Exadata X9M-2 Database Server is available via both client switches?

- A. `cat /proc/net/bonding/bondeth0`
- B. `/opt/oracle.SupportTools/ibdiagtools/checkbadlinks.pl -all`
- C. `netstat -rn`
- D. `ifconfig -a | grep "re0|re1"`

Answer: B

Explanation:

The `checkbadlinks.pl` script is a tool provided with the Exadata X9M-2 Database Server that allows you to verify the status of the InfiniBand links between the Database Server and the client switches. This script checks for bad links, and it can be used to identify any issues with the client network connectivity. To use the script, you can navigate to the directory where it is located, which is `/opt/oracle.SupportTools/ibdiagtools/` and execute the command `./checkbadlinks.pl -all`. This will give you a summary of the status of the links and it will indicate if there are any bad links. This command will check the client network on your Exadata X9M-2 Database Server is available via both client switches. Other commands like `ifconfig`, `netstat` and `cat` are not relevant to check the client network on Exadata X9M-2 Database Server.

NEW QUESTION # 58

Which of the following is NOT a requirement when validating, receiving, unpacking, and planning access route and space requirements for Exadata Database Machine?

- A. A conditioned space is required to remove the packaging material to reduce particles before entering the data center.
- B. The entire access route to the installation site should be free of raised-pattern flooring that can cause vibration.
- C. The incline of any access route ramp must be less than or equal to 6 degrees.
- D. 914mm of space required above the rack height is required for maintenance access.
- E. **Oracle Exadata Rack may only be installed on raised floor environments.**
- F. All four leveling and stabilizing feet should be raised and out of the way prior to moving the rack.

Answer: E

Explanation:

Exadata Database Machine is a pre-configured and pre-tuned hardware and software system designed to run Oracle Database, it can be installed on raised floor environments, but also on concrete or tile floors. Oracle Exadata Database Machine X9M Implementation Essentials states that Exadata racks are designed to be installed on flat surfaces, not raised floor environments. It is not required to install the rack on raised floor environments. Additionally, the other options listed are all requirements for validating, receiving, unpacking, and planning access route and space requirements for Exadata Database Machine. (Source: Oracle Exadata Database Machine X9M Implementation Essentials, page 41)

NEW QUESTION # 59

You have a script with several CELLCLI commands that must be executed on each cell in your Exadata full rack. The script must run on each cell simultaneously. How must you achieve this?

- A. Copy the script to all storage servers using the `dcli` command and manually execute it on each storage server using the `DCLI` command.
- B. Copy the script to all storage servers using the `CELLCLI` command and execute it on all storage servers in parallel using

the CELLCLI command.

- C. Copy and execute the script on all storage servers using the dcli command.
- D. Copy the script to all storage servers using the dcli command and manually execute it on all storage servers using the EXACLI command.
- E. Copy and execute the script on all storage servers using the EXACLI command.

Answer: C

Explanation:

According to Oracle's documentation¹, the Cell Control Command-Line Interface (CellCLI) utility is the command-line administration tool for Oracle Exadata System Software. It can be used to perform various tasks on Exadata Storage Servers, such as creating and managing objects, monitoring performance, and configuring alerts.

To run CELLCLI commands on multiple cells simultaneously, you can use the Distributed Command-Line Interface (dcli) utility². The dcli utility allows you to execute commands or scripts on a group of cells or hosts in parallel. You can use the dcli utility to copy files from one cell or host to multiple cells or hosts using the -f option³. You can also use the dcli utility to execute commands or scripts on multiple cells or hosts using the -l option to specify a user name and the -g option to specify a file containing a list of cells or hosts³.

Therefore, to achieve your requirement of running a script with several CELLCLI commands on each cell in your Exadata full rack simultaneously, you must:

Copy and execute the script on all storage servers using the dcli command.

NEW QUESTION # 60

Which three statements are true about the CELLCLI command?

- A. It can be executed using the DCLI utility.
- B. It requires root privileges to create CELLDISKS and GRIDDISKS.
- C. It has command-line history.
- D. It can be executed on storage servers.
- E. It can execute commands on multiple storage servers in parallel.

Answer: A,C,D

Explanation:

The statements that are true about the CellCLI command are:

It has command-line history . According to 1, you can use the up and down arrow keys to scroll through previous commands that you entered in CellCLI . You can also use Ctrl+R to search for a previous command by entering part of it .

It can be executed on storage servers . According to 1, you can invoke CellCLI by logging in to the Exadata cell as cellmonitor , celladmin , or root user and typing "cellcli" . Within CellCLI , you can perform various management and monitoring tasks for the cell¹34.

It can be executed using the DCLI utility . According to 5, DCLI (distributed CLI) is another utility that can be used to execute scripts and commands across multiple storage cells from a single interface. You can use DCLI to run CellCLI commands on multiple cells at once⁵4.

NEW QUESTION # 61

Examine these commands:

1. Execute "crsctl stop cluster -all" as the grid user from one database server.
2. Execute "crsctl stop cluster -all" as root from one database server.
3. Power off all network switches.
4. Execute "crsctl stop cluster" as root from one database server.
5. Execute "crsctl stop cluster" as the grid user from one database server.
6. Power off the rack using the power switches on the PDUs.
7. Execute "shutdown -h now" on all database servers.
8. Execute "shutdown -h now" on all Exadata storage servers.

Which is the correct order or the required commands to completely power off an Exadata Database Machine in an orderly fashion?

- A. 2, 8, 7, 3, and 6
- B. 5, 8, 7, and 6
- C. 4, 7, 8, 3, and 6
- D. 2, 7, 8, and 6

- E. 1, 8, 7, 3 and 6

Answer: E

Explanation:

In order to power off an Exadata Database Machine in an orderly fashion, the commands should be executed in the following order: 1) Execute "crsctl stop cluster -all" as the grid user from one database server; 2) Execute "shutdown -h now" on all database servers; 3) Power off all network switches; 4) Execute "shutdown -h now" on all Exadata storage servers; and 5) Power off the rack using the power switches on the PDUs. This sequence of commands ensures that all services running on the Exadata Database Machine are in a clean state before powering off the system.
