- B. May 10, 2020
- C. November 05, 2020
- D. June 10, 2020

Answer: D

NEW QUESTION # 172

Universal Containers (UC) notices that its application that allows users to search for accounts makes a network request each time a key is pressed. This results in too many requests for the server to handle.

* Address this problem, UC decides to implement a debounce function on string change handler.

What are three key steps to implement this debounce function?

Choose 3 answers:

- A. If there is an existing setTimeout and the search string change, allow the existing setTimeout to finish, and do not enqueue a new setTimeout.
- B. Ensure that the network request has the property debounce set to true.
- C. If there is an existing setTimeout and the search string changes, cancel the existing setTimeout using the persisted timerId and replace it with a new setTimeout.
- D. When the search string changes, enqueue the request within a setTimeout.
- E. Store the timerId of the setTimeout last enqueued by the search string change handle.

Answer: A,B,D

NEW QUESTION # 173
