Cisco Implementing and Configuring Cisco Identity Services Engine Sample Questions (Q46-Q51):

NEW QUESTION # 46

An administrator is configuring a switch port for use with 802.1X.

What must be done so that the port will allow voice and multiple data endpoints?

- A. Use the command **authentication host-mode multi-domain on the port**
- B. Configure the port with the authentication host-mode multi-auth command
- C. Connect a hub to the switch port to allow multiple devices access after authentication
- D. Connect the data devices to the port, then attach the phone behind them

Answer: A

Explanation:

The multi-domain host mode allows both a data device and a voice device to authenticate on the same port (e.g., a phone and a computer). It is commonly used in scenarios where IP phones and computers share a port.

NEW QUESTION # 47

An engineer is creating a new authorization policy to give the endpoints access to VLAN 310 upon successful authentication. The administrator tests the 802.1X authentication for the endpoint and sees that it is authenticating successfully. What must be done to ensure that the endpoint is placed into the correct VLAN?

- A. Ensure that the endpoint is using The correct policy set
- B. Configure the switchport access vlan 310 command on the switch port
- C. Ensure that the security group is not preventing the endpoint from being in VLAN 310
- D. Add VLAN 310 in the common tasks of the authorization profile

Answer: D

Explanation:

We don't need to manually configure the switchport to a certain VLAN, give the proper VLAN allocation from the Authz profile.

NEW QUESTION # 48

Which Cisco ISE deployment model provides redundancy by having every node in the deployment configured with the Administration, Policy Service, and Monitoring personas to protect from a complete node failure?

- A. distributed
- B. hybrid
- C. two-node
- D. dispersed

Answer: A

NEW QUESTION # 49

An administrator is configuring the Native Supplicant Profile to be used with the Cisco ISE posture agents and needs to test the connection using wired devices to determine which profile settings are available. Which two configuration settings should be used to accomplish this task?

(Choose two.)

- A. authentication mode
- B. proxy host/IP
- C. allowed protocol
- D. security
- E. certificate template

Answer: C,E

NEW QUESTION # 50

What is a requirement for Feed Service to work?

- A. Cisco ISE has Internet access to download feed update
- B. TCP port 3080 must be opened between Cisco ISE and the feed server
- C. Cisco ISE has access to an internal server to download feed update
- D. Cisco ISE has a base license.

Answer: D

NEW QUESTION # 51
