

## 2026 JN0-637–100% Free Instant Discount | Useful JN0-637 Valid Cram Materials

BONUS!!! Download part of ITPassLeader JN0-637 dumps for free: <https://drive.google.com/open?id=1eVotPAOx-qBFjg-6519z4HddMeeZZbnT>

Nowadays, seldom do the exam banks have such an integrated system to provide you a simulation test. You will gradually be aware of the great importance of stimulating the actual exam after learning about our JN0-637 Study Tool. Because of this function, you can easily grasp how the practice system operates and be able to get hold of the core knowledge about the Security, Professional (JNCIP-SEC) exam. In addition, when you are in the real exam environment, you can learn to control your speed and quality in answering questions and form a good habit of doing exercise, so that you're going to be fine in the Security, Professional (JNCIP-SEC) exam.

### Juniper JN0-637 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Advanced Network Address Translation (NAT): This section evaluates networking professionals' expertise in advanced NAT functionalities and their ability to manage complex NAT scenarios.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Advanced Policy-Based Routing (APBR): This topic emphasizes on advanced policy-based routing concepts and practical configuration or monitoring tasks.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Automated Threat Mitigation: This topic covers Automated Threat Mitigation concepts and emphasizes implementing and managing threat mitigation strategies.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Layer 2 Security: It covers Layer 2 Security concepts and requires candidates to configure or monitor related scenarios.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Advanced IPsec VPNs: Focusing on networking professionals, this part covers advanced IPsec VPN concepts and requires candidates to demonstrate their skills in real-world applications.</li></ul>

- Multinode High Availability (HA): In this topic, aspiring networking professionals get knowledge about multinode HA concepts. To pass the exam, candidates must learn to configure or monitor HA systems.

## Instant JN0-637 Discount - Provide Valid Material to pass Security, Professional (JNCIP-SEC)

Our JN0-637 guide questions have helped many people obtain an international certificate. In this industry, our products are in a leading position in all aspects. If you really want to get an international certificate, our JN0-637 training quiz is really your best choice. Of course, you really must get international certification if you want to stand out in the job market and get better jobs and higher salaries. With the help of our JN0-637 Exam Materials, you can reach your dream.

### Juniper Security, Professional (JNCIP-SEC) Sample Questions (Q101-Q106):

#### NEW QUESTION # 101

Exhibit

You configure Source NAT using a pool of addresses that are in the same subnet range as the external ge-0/0/0 interface on your vSRX device. Traffic that is exiting the internal network can reach external destinations, but the return traffic is being dropped by the service provider router.

Referring to the exhibit, what must be enabled on the vSRX device to solve this problem?

- A. Persistent NAT
- B. DNS Doctoring
- C. Proxy ARP
- D. STUN

**Answer: B**

#### NEW QUESTION # 102

Exhibit.

```
user@host# show security idp-policy my-policy rulebase-ips
rule 1 {
  match {
    attacks {
      custom-attacks my-signature;
    }
  }
  then {
    action {
      no-action;
    }
  }
}
rule 2 {
  match {
    attacks {
      custom-attacks my-signature;
    }
  }
  then {
    action {
      ignore-connection;
    }
  }
}
rule 3 {
  match {
    attacks {
      custom-attacks my-signature;
    }
  }
  then {
    action {
      drop-packet;
    }
  }
}
rule 4 {
  match {
    attacks {
      custom-attacks my-signature;
    }
  }
  then {
    action {

```

A hub member of an ADVPN is not functioning correctly.  
Referring the exhibit, which action should you take to solve the problem?

- A. [edit security]  
user@hub-1# delete ike gateway advpn-gateway advpn partner
- B. [edit interfaces]  
root@vSRX-1# delete st0.0 multipoint
- C. [edit security]  
user@hub-1# set ike gateway advpn-gateway advpn suggerter disable
- **D. [edit interfaces]**  
user@hub-1# delete ipsec vpn advpn-vpn traffic-selector

**Answer: D**

### NEW QUESTION # 103

You are using trace options to troubleshoot a security policy on your SRX Series device.

```
user@SRX> show log flow-log | find "policy search"
Jan  9 14:19:37 14:19:37.520231:CID-0:THREAD_ID-01:LSYS_ID-00:RT:flow_first_policy_search: policy search from zone Linux-9-
zone-> zone junos-host (0x0,0x94c80016,0x16), result: 0x5ed4b468, pending: 0?, is http cached = 0
Jan  9 14:19:37 14:19:37.520232:CID-0:THREAD_ID-01:LSYS_ID-00:RT:flow_first_policy_search: dynapp_none_policy: TRUE,
uc_none_policy: TRUE, is_final: 0x0, is_explicit: 0x0, policy_meta_data: 0x0
Jan  9 14:19:37 14:19:37.520233:CID-0:THREAD_ID-01:LSYS_ID-00:RT:  app 20, timeout 1800s, curr ageout 20s
Jan  9 14:19:37 14:19:37.520234:CID-0:THREAD_ID-01:LSYS_ID-00:RT: packet dropped, denied by policy
Jan  9 14:19:37 14:19:37.520234:CID-0:THREAD_ID-01:LSYS_ID-00:RT: denied by policy deny-ssh(7), dropping pkt
Jan  9 14:19:37 14:19:37.520235:CID-0:THREAD_ID-01:LSYS_ID-00:RT: packet dropped, policy deny.
```

Referring to the exhibit, which two statements are true? (Choose two.)

- A. No entries are created in the SRX session table.
- B. The traffic is not destined for the root logical system.
- **C. The SSH traffic matches an existing session.**
- **D. The security policy controls traffic destined to the SRX device.**

**Answer: C,D**

Explanation:

Explanation:

### NEW QUESTION # 104

Which two statements are true about the procedures the Junos security device uses when handling traffic destined for the device itself? (Choose two.)

- A. If the received packet is destined for an interface other than the ingress interface, then the device performs a security policy evaluation based on the ingress and egress zone.
- **B. If the received packet is addressed to the ingress interface, then the device first examines the host- inbound-traffic configuration for the ingress interface and zone.**
- C. If the received packet is addressed to the ingress interface, then the device first performs a security policy evaluation for the junos-host zone.
- **D. If the received packet is destined for an interface other than the ingress interface, then the device performs a security policy evaluation for the junos-host zone.**

**Answer: B,D**

Explanation:

When handling traffic that is destined for itself, the SRX examines the host-inbound-traffic configuration for the ingress interface and the associated security zone. It evaluates whether the traffic should be allowed based on this configuration. Traffic not addressed to the ingress interface is handled based on security policies within the junos-host zone, which applies to traffic directed to the SRX itself. For more details, refer to Juniper Host Inbound Traffic Documentation.

When handling traffic that is destined for the SRX device itself (also known as host-bound traffic), the SRX follows a specific process to evaluate the traffic and apply the appropriate security policies. The junos-host zone is a special security zone used for managing traffic destined for the device itself, such as management traffic (SSH, SNMP, etc.).

\* Explanation of Answer B (Packet to a Different Interface):

\* If the packet is destined for an interface other than the ingress interface, the SRX performs a security policy evaluation specifically for the junos-host zone. This ensures that management or host-bound traffic is evaluated according to the security policies defined for that zone.

\* Explanation of Answer C (Packet to the Ingress Interface):

\* If the packet is addressed to the ingress interface, the device first checks the host-inbound-traffic configuration for the ingress interface and zone. This configuration determines whether certain types of traffic (such as SSH, HTTP, etc.) are allowed to reach the device on that specific interface.

Step-by-Step Handling of Host-Bound Traffic:

\* Host-Inbound Traffic: Define which services are allowed to the SRX device itself:

bash

Copy code

```
set security zones security-zone <zone-name> host-inbound-traffic system-services ssh
```

\* Security Policy for junos-host: Ensure policies are defined for managing traffic destined for the SRX device:

bash

Copy code

```
set security policies from-zone <zone-name> to-zone junos-host policy allow-ssh match source-address any set security policies from-zone <zone-name> to-zone junos-host policy allow-ssh match destination-address any
```

Juniper Security Reference:

\* Junos-Host Zone: This special zone handles traffic destined for the SRX device, including management traffic. Security policies must be configured to allow this traffic. Reference: Juniper Networks Host-Inbound Traffic Documentation.

## NEW QUESTION # 105

Which role does an SRX Series device play in a DS-Lite deployment?

- A. STUN server
- **B. Softwire concentrator**
- C. Softwire initiator
- D. STUN client

**Answer: B**

## NEW QUESTION # 106

.....

In the past ten years, our company has never stopped improving the Security, Professional (JNCIP-SEC) exam cram. For a long time, we have invested much money to perfect our products. At the same time, we have introduced the most advanced technology and researchers to perfect our Security, Professional (JNCIP-SEC) exam questions. At present, the overall strength of our company is much stronger than before. We are the leader in the market and master the most advanced technology. In fact, our JN0-637 Test Guide has occupied large market shares because of our consistent renovating. We have built a powerful research center and owned a strong team. Up to now, we have got a lot of patents about the JN0-637 test guide. In the future, we will continuously invest more money on researching.
